ENDORSEMENT OF THE PRECINCT 3 – ELLIOT ROAD LOCAL STRUCTURE PLAN

This structure plan is prepared under the provisions of the City of Wanneroo District Planning Scheme No.2.

IT IS CERTIFIED THAT THIS STRUCTURE PLAN WAS APPROVED BY RESOLUTION OF THE WESTERN AUSTRALIAN PLANNING COMMISSION ON:

_____ Date

Signed for and on behalf of the Western Australian Planning Commission:

_____

An officer of the Commission duly authorised by the Commission pursuant to section 16 of the Planning and Development Act 2005 for that purpose, in the presence of:

_____ Witness

_____ Date

_____ Date of Expiry

EXECUTIVE SUMMARY

VISION

The vision for the Precinct 3 'Elliot Road' Local Structure Plan (LSP) is to create a high-quality residential enclave nestled between conservation/recreation areas to the north and east, and a rural lifestyle precinct to the south, as a sensitive extension of the existing urban areas to the west.

The Local Structure Plan has well defined boundaries with these high amenity areas. In addition, significant areas of vegetation are retained within the LSP area, together with the key ingredients of a high-quality residential environment, being:

- a Primary School
- a Neighbourhood Shopping Centre
- Neighbourhood Playing Fields, and
- connected areas of local recreation and open space

The area is characterised by long term generationally owned rural land parcels of both an active and passive nature. Many families have lived on their properties for decades, contributing to a strong sense of place and identity. This is a well-established, neighbourly community with a number of members who wish to remain living within the project area.

Facilitating a seamless continuation of this sense of community is an important part of the vision for the project. Implementation of the vision will occur by way of the following project principles:

1. Injecting Heart – embracing and enhancing the existing strong sense of place, facilitating a connected community and meaningful relationships, where residents feel healthy, safe and happy
2. Creating A Thriving Neighbourhood – embracing leading design principles, innovation, environmental sustainability and community integration
3. Establishing a blueprint to cater for the current and future needs of residents and to respond to the demands of modern life. Connecting residents to the local and broader East Wanneroo area, providing easy access to amenities including education, employment, retail and medical facilities.

DESIGN RATIONALE

The design rationale for the Local Structure Plan is very simple, as follows:

1. To integrate the important Integrator Arterial Road/Rapid Transit Route (along the alignment of Elliot Road), as depicted on the East Wanneroo District Structure Plan. This corridor connects Lenore Road (the primary north-south roadway through the East Wanneroo urban area), via the future District Shopping Centre (within adjacent Precinct 12), to the future Yanchep-Whiteman Freeway
2. To integrate the north-south Neighbourhood Connector (B), central to the Local Structure Plan, as shown on the East Wanneroo District Structure Plan. This road connects to future development precincts to the north, linking the community to the proposed Primary School and various areas of recreation, including the Neighbourhood Playing Fields
3. To carefully locate a Neighbourhood Shopping Centre (Local Centre) for efficient access and high-level exposure, together with ensuring it is positioned to service its catchment – without negatively impacting the future District Shopping Centre to the east
4. To maintain and enhance a number of areas of significant remnant vegetation
5. To provide efficient residential cells with appropriate orientation for solar gain, incorporating various lot typologies to facilitate the development of a range of dwelling forms to meet changing market demands

Regarding the latter, the Local Structure Plan incorporates simple street blocks on north-south and east-west orientations for solar and development efficiency. These street blocks also provide legible links to and between recreational areas and many provide vistas to parklands, assisting with the creation of amenity and sense of place.

Proposed 'Green Streets' link recreation areas across the Precinct and provide legible access to the Primary School. These streets provide for additional street tree planting and shared paths to enhance pedestrian/cyclist movement and to increase tree canopy across the LSP area. Located mainly at the end of cells, the planted verges are mostly uninterrupted by driveways, providing for a seamless landscaped environment.

Green Street locations also facilitate the retention of existing tree avenues where appropriate.

Precinct 3 is primarily a Suburban Neighbourhood, though also includes areas of higher density ('Urban Neighbourhood') shown abutting the Neighbourhood Shopping Centre and in close proximity to the future District Shopping Centre, generally in accordance with the East Wanneroo District Structure Plan.

Areas of higher density are also shown at the location of various retained homesteads, facilitating alternative product typologies when these sites are redeveloped in the future. These homestead sites meet the locational performance criteria for the provision of increased density.

The road layout has also been carefully planned to provide for development without the construction of Shenton Road at the southern boundary. At this location, roads are design to 'T' into Shenton Road with no direct lot frontage to Shenton Road. This conservative approach has been proposed in order to consider the expectations of landowners within Precinct 2 to the south, given the long-term nature of that rural lifestyle living area.

Importantly, however, the construction of Shenton Road may be necessary to satisfy the access requirements of the **Bushfire Management Plan** – refer **Appendix 3**. This element can be further considered at the time of subdivision and it is noted that construction of Shenton Road will also improve the bushfire safety of existing homes within adjacent Precinct 2.

OPPORTUNITY

Importantly, approval of the Local Structure Plan for Precinct 3 presents an opportunity for the expedited progression of residential development within the East Wanneroo urban corridor due to several favourable factors:

1. Strategic Alignment

   The whole of Precinct 3 is identified within the East Wanneroo District Structure Plan (DSP) as a short-term 'Stage 1 2021 - 2031' development area, supporting early activation and streamlined approval pathways. This is particularly important given potential delays to Stage 2 areas (and low-lying Stage 1 areas) due to ongoing refinement of the groundwater management scheme.

2. Servicing Readiness

   The precinct benefits from its proximity to existing infrastructure, allowing for the straightforward extension of services and reducing lead times for delivery.

3. Affordable Housing Outcomes

   The Local Structure Plan facilitates the timely provision of affordable and accessible residential lots, aligning with broader government and community housing objectives.

4. Non-Contingent Delivery

   Unlike other Precincts within the East Wanneroo District Structure Plan area, Precinct 3 is not reliant on unresolved matters, such as the groundwater management scheme, enabling its progression as a stand-alone development opportunity.

These factors collectively support a prioritised assessment and approval process for the LSP.

EXECUTIVE SUMMARY TABLE

The Precinct 3 Elliot Road Local Structure Plan applies to land generally bound by Bush Forever Site: 471 to the north, Benmuni Road to the east, Lenore Road to the west and Shenton Road to the south, being the land located within the inner edge of the line denoting the structure plan boundary on the Structure Plan Map (refer **Plan 1**). The boundary of the LSP accords with that shown on the East Wanneroo District Structure Plan. A summary of all key statistics and planning outcomes of the structure plan is provided in **Table 3** below:

TABLE 3: SUMMARY TABLE		
ITEM	DATA	REPORT REF.
Total area covered by the structure plan	141.0216 (hectares)	
Area of each land use proposed: - Residential (net subdivisible area) - Non-creditable open space - Commercial - Church - MRS P&R Reserve - MRS Other Regional Road Reserve - Public Purposes – Primary School	 107.1874ha 1.2300ha 2.0859ha 1.8554ha 14.2469ha 10.6638ha 3.7528ha	Section 5
Net residential area (excluding roads)	63.1991ha	
Total estimated lot yield	1,753 lots	5.3
Estimated number of dwellings	1,856 dwellings	5.3
Estimated residential site density (dwgs/site ha)	29.36	5.3
Estimated population	5,568	5.3
Number of high schools	Nil	N/A
Number of primary schools	1	5.7
Estimated commercial floor space (NLA)	7,950m^2	5.8
Estimated area and percentage of public open space given over to: - Regional Open Space (ha/%) - District Open Space (ha/%) - Neighbourhood Parks (ha/%) - Local Parks (ha/%) - Creditable POS	 14.2469ha/10.10% 0.00ha/0% 4.5003ha/3.19% 7.4776ha/5.30% 10.7479ha (10.03%)	5.2

DSP	East Wanneroo District Structure Plan (2021)

PART ONE | IMPLEMENTATION

1. LOCAL STRUCTURE PLAN AREA AND OPERATION

This Local Structure Plan for 'Precinct 3 – Elliot Road', within the East Wanneroo District Structure Plan, applies to all land within the inner edge of the line denoting the Structure Plan boundary on the **Structure Plan Map** (**Plan 1**).

The Local Structure Plan is in effect from the date stated on the approval letter issued by the WAPC and is valid for a period of 10 years [or for any longer period approved by the WAPC].

2. PURPOSE

This Local Structure Plan has been prepared to guide the subdivision and development of land within 'Precinct 3 – Elliot Road' as identified on the endorsed *East Wanneroo District Structure Plan (2021)* (DSP) and follows the guidance set out in the DSP and WA Planning Manual 'Guidance for Structure Plans' *(August 2023)*.

3. STAGING

Given Precinct 3 abuts established residential housing to the west, the available road connections through or abutting the Local Structure Plan area, such as Elliot Road, Lenore Road, Nicholas Road and Benmuni Road, facilitate an orderly and logical extension of existing development.

The first stage of development is anticipated to occur on Elliot Road centrally within the Precinct generally within the vicinity of the existing drainage area. This low point within the Precinct is the location of the first wastewater pumping station, it will contain future drainage and it includes a proposed recreation area. This location is also situated at the intersection of Elliot Road and the north-south Neighbourhood Connector road, providing ideal connectivity and access as future stages are developed.

It is anticipated that a total of more than 20 stages of development will be required to deliver the overall Local Structure Plan, spanning an estimated 7 to 10 years. **Figure 9 - Indicative Early Staging Plan** is included in **Part Two – Explanatory Section** herein

and **Section 5.11 - Staging** of this report also provides further information regarding indicative staging for the Precinct.

The Indicative Early Staging Plan shows the intended location of the initial four stages of development based on servicing and landownership, with Satterley Property Group having assembled landholdings to ensure delivery of a connected, legible and cohesive project. The location of future stages will be considered as development progresses over time.

4. SUBDIVISION AND DEVELOPMENT REQUIREMENTS

4.1 LAND USE ZONES AND RESERVES

Land use permissibility shall be in accordance with the **Structure Plan Map** (**Plan 1**) and the corresponding zones and reserves set out in the City of Wanneroo *District Planning Scheme No.2*.

4.1.1 ZONES AND PRECINCTS

Land uses shown on the **Structure Plan Map** (**Plan 1**) include:

Metropolitan Region Scheme

- Parks and Recreation
- Other Regional Roads

Local Planning Scheme

- Residential (R30-R60) – (DSP 'Suburban Neighbourhood')
- Residential (R40-R80) – (DSP 'Urban Neighbourhood')
- Public Open Space
- Public Purposes – Primary School
- Commercial

4.1.2 ROAD RESERVES

The **Transport Impact Assessment** (TIA) included at **Appendix 7** details the specifications for the proposed movement network within the Local Structure Plan.

Table 4 over page summarises the proposed road function and characteristics.

TABLE 4 ROAD FUNCTION AND CHARACTERISTICS				
Road Hierarchy	Max speed (km/h)	Max range volume (vpd)	Indicative reserve width	Min Pavement width (m)
Integrator Arterial Rd Rapid Transit Route	60 or 70	35,000	45m (to allow for rapid bus)	4 x 3.5m traffic 2 x 2m cycle
Integrator A (four lanes)	60 or 70	15,000 to 35,000	35m (32.4)	2 x 8.2
Neighbourhood Connector A	50	7,000	25m (24.4)	2 x 7.1
Neighbourhood Connector B	50	3,000	20m (19.4)	11.2
Access Streets				
B (Wider Street)	50	3,000	15-20m (17.9)	9.7
D (Yield or Give Way Street)	50	1,000	15m (15.4 – 16)	6.0 – 7.2

The Local Structure Plan proposes a network of streets based on Liveable Neighbourhoods guidance, together with a number of 'Green Streets' which are designed to accommodate additional trees. These 'Green Streets' are positioned to provided key east-west and north-south vegetation linkages through the Precinct, providing a safe, shady pedestrian and cycling focussed environment connecting to the primary school and public open spaces.

The Structure Plan Map details the proposed movement networks, the formal hierarchy for which includes:

- The Integrator Arterial Road/Rapid Transit Route (45m)
- Integrator A (35m)
- Neighbourhood Connector A (25m)
- Neighbourhood Connector B (20m)
- Access Street B (17.9m)
- Access Street D (15.4m)

Cross Sections for these streets are included in **Appendix 7**.

4.1.3 PUBLIC OPEN SPACE

Public Open Space (POS) shall be provided generally in accordance with the **Structure Plan Map** (**Plan 1**). A **Public Open Space Schedule** is attached at **Appendix 5**.

The POS distribution within the Local Structure Plan has been provided in accordance with statutory guidance, being approximately 10.03% in creditable area. This may be further refined during development. This marginal over-provision provides flexibility with regard to ongoing district and local water management and to provide flexibility with the proposed parkland reserves specified in the DSP.

4.1.4 OTHER RESERVES

The Local Structure Plan includes various reserves, including:

- Parks & Recreation and Public Open Space
- Public Purposes – Primary School (1)
- Neighbourhood Playing Fields
- Waste Water Pumping Stations (permanent and temporary with final locations to be confirmed)
- Commercial

The Parks & Recreation reservations are associated with areas of suitable quality vegetation as identified within the East Wanneroo District Structure Plan (2021) (refer **District Structure Plan Extract** at **Figure 6**). The vegetation on Lot 43 Elliot Road, Lot 66 Nicholas Road and a portion of Lot 67 Nicholas Road has been preserved in proposed Parks & Recreation reserves as a result of the environmental technical analysis contained herein – and further to those properties being identified as "Parklands Subject to Confirmation" in the DSP.

The Primary School is located south of Elliot Road and central to its catchment, in accordance with the DSP. The Primary School abuts the proposed north south Neighbourhood Connector B road reserve to provide efficient access through the LSP area and also to adjacent Precincts 2 and 13. The site area of 3.7528ha meets the operational policy requirements for collocated primary schools.

BURGESS DESIGN GROUP | town planning + urban design

The Neighbourhood Playing Field is provided in accordance with the East Wanneroo Community Infrastructure Plan (2023) and is co-located with the proposed Primary School site in accordance with part 3.9 'Schools and Community Facilities' of the DSP.

The Waste Water Pumping Station sites (permanent and temporary) will form part of future reserves. The proposed permanent WWPS will be situated on the southern side of Elliot Road, west of the Neighbourhood Connector within POS 5, with the exact reservation identified following further detailed engineering design.

The temporary WWPS sites are proposed to be located within POS 4 and POS 11.

A Commercial zone, to facilitate development of a Neighbourhood Centre, is included within the Local Structure Plan area as required under the DSP. It has been located at the north-eastern corner of the intersection of Lenore Road and Elliot Road, as a strong reference point for the precinct, to cater for passing traffic and to allow for easy access to public transport.

4.2 DENSITY AND DEVELOPMENT

The **Structure Plan Map** at **Plan 1** designates the R-codes applicable to subdivision and development in the structure plan area.

4.2.1 DENSITY AND R-CODES

The **Structure Plan Map** at **Plan 1** shows the majority of Precinct 3 as 'Residential R30-R60' in accordance with the 'Suburban Neighbourhood' classification designated in the District Structure Plan.

Portions of the Precinct are also shown as 'Residential R40-R80', generally in accordance with the 'Urban Neighbourhood' designation under the District Structure Plan.

The latter classification also applies to the six 'Homestead Lots' incorporated into the Local Structure Plan. This classification facilitates the future redevelopment of these sites to provide for a variety of housing typologies to suit market demands.

4.2.2 LOCATIONAL CRITERIA

A Residential Density Code Plan shall be submitted with all residential subdivision applications indicating the residential density coding applicable to each lot, generally in accordance with the following criteria.

Note these are maximum density targets and it is intended subdivision form will respond to prevailing market conditions and may also include development at a density less than R30.

Density coding criteria:

I. A base code of R30

II. R40 for lots:

   a. At the end of residential street block cells;
   b. Within 250m of Public Open Space or Parks & Recreation reserves;
   c. Abutting or directly opposite the primary school;
   d. With frontage to a Neighbourhood Connector or Integrator A road; and/or
   e. Within 500m of a public transport stop or equivalent.

III. R60 for lots:

   a. Within 250m of a public transport stop or equivalent; and/or
   b. To which II applies that also:
      i. have access to a laneway; and/or
      ii. Are over 600m^2 in area and that are to be developed for grouped or multiple dwellings*.

**Note: Section III (b) ii is not intended to facilitate the re-subdivision of sites for green-title or survey strata lots. If this is proposed a new density code plan shall be submitted that complies with the criteria listed above.*

IV. Up to an R80 density for development on lots within the Urban Neighbourhood residential catchment of the District Shopping Centre as shown on the DSP and designated Residential R40-R80 on the LSP.

Upon approval by WAPC, the R-Codes plan forms part of the Local Structure Plan.

4.2.3 DEVELOPMENT LAYOUT

Figure 8 – School Sites Indicative Development Plan shows an indicative layout of school buildings and recreational facilities on the proposed Primary School site.

The layout places the proposed recreational/oval facilities in the eastern portion of the Primary School site to minimise any potential bushfire impact from the neighbouring 'Parkland Reserve' on Lot 66. Note that there is a strip of public open space situated between the bushland area on Lot 66 and the Primary School to provide access to the Neighbourhood Playing Fields and separation to the bushland.

4.2.4 LOCAL DEVELOPMENT PLANS (LDP)

Local Development Plans are to be prepared for lots:

i. Of irregular shape or less than 260m² in area;

ii. That obtain access from a laneway or right-of-way;

iii. Directly abutting areas of public open space; and/or

iv. Intended to contain grouped or multiple dwellings,

And shall set out the following (as applicable):

1) Street and boundary setbacks;

2) Dwelling/building orientation;

3) Fencing;

4) Open Space;

5) Garage setbacks and width;

6) Vehicular and pedestrian access;

7) Parking requirements;

8) Overshadowing; and

9) Visual privacy.

4.3 OTHER REQUIREMENTS

4.3.1 BUSHFIRE PROTECTION

A **Bushfire Management Plan** (refer **Appendix 3**) has been prepared as a strategic guide to demonstrate how development compliance will be delivered at future planning stages in accordance with the WAPC Guidelines. Aside from the preparation of BMPs to accompany future subdivision and development applications where appropriate, there are no further items to implement, enforce or review at this strategic stage of the planning process.

Future BMPs prepared for subsequent subdivision and development applications are to meet the relevant commitments outlined in this strategic level BMP, address the relevant requirements of SPP 3.7 (i.e. Policy Measures 6.4 and 6.5 respectively) and demonstrate in detail how the proposed future development will incorporate the relevant acceptable solutions or meet the performance requirements of the Guidelines.

4.3.2 INFRASTRUCTURE ARRANGEMENTS

An **Engineering Servicing Report** is attached at **Appendix 10** and is summarised in **Section 5.9 of Part Two** of this report.

The engineering investigation has confirmed the land is capable of supporting the proposed development in accordance with the Local Structure Plan with a logical progressive extension of infrastructure and base capacity.

The existing ground conditions and past land uses will not limit the proposed development.

Road access to the development will be provided via existing roads which bound the Precinct.

Sewerage will be provided for the majority of the Precinct by constructing a permanent wastewater pump station on Elliot Road, supplemented by two temporary pump stations at low points on the eastern boundary of the precinct, as development progresses.

There is adequate existing water infrastructure to service the LSP.

Initial power supply can be provided by connection to the existing high voltage (HV) infrastructure in Elliot and Nicholas Roads. Western Power has advised that ultimately the East Wanneroo Precinct 3 residential development will require a new distribution feeder from the Wangara Substation, to provide the required capacity.

Telecommunications and gas are available from existing services on Lenore Road.

4.3.3 DEVELOPMENT CONTRIBUTIONS

The City of Wanneroo and WAPC have commenced preparation of a District Developer Contribution Plan (DCP) for the East Wanneroo DSP Area, inclusive of Precinct 3.

The Draft District DCP was initially intended to be released for public comment in two parts, as follows:

- Part 1, being Amendment No. 214 to District Planning Scheme No. 2 and released for public comment on 20 March 2025 (closing 19 May 2025), relating to infrastructure and land acquisition for regional and district-level infrastructure items, excluding drainage and water management infrastructure requirements; and
- Part 2, to be released in mid-late 2025, relating to the district-level drainage and water management infrastructure network requirements.

Department of Planning, Lands & Heritage (DPLH) planning officers have recently advised that the drainage and water management infrastructure network may be designed and implemented by the Water Corporation as a 'groundwater management scheme' under a separate (non-DCP) mechanism. At the time of submitting this LSP, this was still to be determined.

With Satterley Property Group having assembled significant holdings within Precinct 3, the need for a Local Developer Contribution Plan has not yet been determined. This element of infrastructure provision will be discussed further with the approval agencies during the assessment process.

BURGESS DESIGN GROUP | town planning + urban design

4.3.4 PROTECTION OR MANAGEMENT OF ENVIRONMENTAL OR LANDSCAPE FEATURES

The coordinated approach taken during the formulation of the Precinct 3 Local Structure Plan has been one to best protect and/or manage environmental and landscape features.

The technical design process for the Local Structure Plan has involved all technical disciplines working collaboratively together to ensure elements of the project are carefully considered and integrated. This includes earthworks designs formulated around vegetation retention objectives, landscaping proposals considering bushfire management and transport engineering collaboration with urban design to create efficient, but also quiet and safe movement systems that respect the local sense of place.

The design of the LSP has also sought to balance the protection of environmental or landscape features with the efficient development of residential housing to meet the needs of the growing population within Wanneroo. The overarching DSP has been specifically conceived to facilitate orderly urban development in this way.

4.3.5 WATER RESOURCE MANAGEMENT

A Local Water Management Strategy (LWMS) has been prepared to demonstrate how the Local Structure Plan will address water management as identified in the District Water Management Strategy (DWMS).

The modelling considered the risks associated with groundwater interaction now and in the future, noting Precinct 3 has considerable depth to groundwater. As such, the LWMS has been prepared on the basis that the Precinct can be fully self-sufficient. No discharge is proposed into any adjoining Precinct, with the clearance to groundwater for the abutting Precinct to the north (Precinct 13), also not required to discharge into Precinct 3.

The LWMS has been prepared to detail how all forms of water, including groundwater, stormwater and potable water, will be managed on-site in accordance with the Better Urban Water Management Guidelines (WAPC, 2008).

The LWMS provides strategies and plans for total water cycle management across the Local Structure Plan area in accordance with the principles of Water Sensitive Urban Design (WSUD).

The LWMS also provides a summary of local and regional environmental data that informs management strategies for stormwater, groundwater, protection of receiving environments a water conservation. A strategy for implementing the total water cycle management during construction and post development is also provided.

The **Local Water Management Strategy** is attached at **Appendix 8**.

4.3.6 LAND FRAGMENTATION

The East Wanneroo District Structure Plan is characterised by areas of highly fragmented land ownership. Precinct 3 includes 38 landholdings (plus a drainage reserve vested with the City of Wanneroo) across almost 135ha of land, with many lots being between 2ha and 4ha in area. Fragmented development of this scale represents a new paradigm for Perth's residential land industry.

At the time of lodgement of this Local Structure Plan, Satterley Property Group has assembled approximately one-third of the Precinct, with land acquisitions ongoing. This assembly process has taken more than 5 years.

5. ADDITIONAL DETAILS

5.1 INFORMATION TO BE SUBMITTED WITH AN APPLICATION

5.1.1 HOMESTEAD LOTS

An application for subdivision approval for a Homestead Lot shall include a plan demonstrating how the proposed lot will integrate with and not prejudice the surrounding planned development (including re-subdivision and/or development of the Homestead Lot).

Where the applicable services cannot be readily connected prior to the future residential development being frontal to the Homestead Lot, a condition of subdivision approval shall be imposed requiring various arrangements being made with the local government for payment of a bond for the following works (as applicable).

The arrangements include:

a) Provision of an underground electricity supply service;
b) Provision of a suitable water supply service; and
c) Provision of a sewerage service.

And in such an event, the applicable standard servicing conditions may be omitted, to facilitate early titling of the Homestead Lot.

5.1.2 STUDIES TO BE REQUIRED UNDER CONDITION OF SUBDIVISION AND/OR DEVELOPMENT APPROVAL

The studies to be required under conditions of subdivision approval are outlined in **Table 5** below.

TABLE 5: ADDITIONAL INFORMATION		
ADDITIONAL INFORMATION	APPROVAL STAGE	CONSULTATION REQUIRED
Urban water management plan	Subdivision	City of Wanneroo and Department of Water and Environmental Regulation
Bushfire management plan, as required or as a minimum a 'bushfire statement'	Subdivision	Department of Fire and Emergency Services
Local Development Plans, as required	Post-subdivision (condition of approval)	City of Wanneroo

PART TWO | EXPLANATORY SECTION

1. PLANNING BACKGROUND

1.1 INTRODUCTION AND PURPOSE

This Local Structure Plan has been prepared on behalf of Satterley Property Group in accordance with the WAPC's *WA Planning Manual – Guidance for Structure Plans (August 2023)* and the deemed provisions of the City of Wanneroo *District Planning Scheme No. 2*, to guide the subdivision and development of land in 'Precinct 3 – Elliot Road' as identified in the *East Wanneroo District Structure Plan (2021)* (District Structure Plan – DSP).

The Local Structure Plan has been prepared by Burgess Design Group with inputs from a multidisciplinary team comprising:

▪ Coterra Environment	Environmental Assessment Report
▪ Emerge	Bushfire Management Plan
	Landscape Masterplan
▪ Transcore	Transport Impact Assessment
▪ Hyd2o Hydrology	Local Water Management Strategy
▪ Cossill & Webley	Engineering Servicing Report
▪ Llyod George	Transportation Noise Assessment
▪ Taktics4	Retail Needs Assessment

This Local Structure Plan provides a synthesis of all available information and sets out a planning framework to guide the future development of Precinct 3 – Elliot Road.

BURGESS DESIGN GROUP | town planning + urban design

1.2 LAND DESCRIPTION

1.2.1 LOCATION

The site is located approximately 3 kilometres south-east of the City of Wanneroo and 21 km north of the Perth Central Business District.

The site is generally bound by Bush Forever Site: 471 to the north, Benmuni Road to the east, Lenore Road to the west and Shenton Road to the south (refer **Figure 1 – Location Plan**).

1.2.2 AREA AND LAND USE

The Local Structure Plan encompasses 141.0216ha of land.

Existing uses are predominantly rural residential/lifestyle living, with various rural pursuits, and market gardens. There are also areas of remnant vegetation known to have environmental values (refer **Figure 2 – Aerial Photograph**).

1.2.3 LEGAL DESCRIPTION AND OWNERSHIP

This structure plan applies to 38 individual lots, being those contained within the inner edge of the line denoting the structure plan boundary on the **Structure Plan Map (Plan 1)**.

A **Legal Description and Ownership** schedule is provided at **Appendix 1** to show current landownership within the Local Structure Plan area, as at the time of LSP preparation in March, 2025.

1.2.4 PROPONENT

This Local Structure Plan has been prepared by Burgess Design Group and the technical consulting team listed in section 1.1, on behalf of Satterley Property Group.

2. PLANNING FRAMEWORK

2.1 ZONING AND RESERVATIONS

2.1.1 METROPOLITAN REGION SCHEME

The site is predominantly zoned 'Urban Deferred' under the *Metropolitan Region Scheme* (MRS) (refer **Figure 3 – Metropolitan Region Scheme Zoning**). Portions of the site are zoned 'Rural' and designated as 'Bush Forever Sites'. These areas are generally located abutting the northern boundary of Precinct 3 and within Lots 66 and 67 on Nicholas Road.

Lodgement of this Local Structure Plan facilitates submission of an amendment to the Western Australian Planning Commission to lift the urban deferment and thus put an Urban Zone in place across the Precinct. The future 'Urban' zoning will then facilitate development, as outlined in Section 2.2.6 of the East Wanneroo District Structure Plan.

In accordance with both the WAPC's *Lifting of Urban Deferment Guidelines* and the DSP, this Local Structure Plan provides:

- A Local Structure Plan to guide development of the Precinct;
- Confirmation of availability of water and wastewater services; and
- Other technical information relevant to support the future subdivision and development of the area.

2.1.2 CITY OF WANNEROO DISTRICT PLANNING SCHEME NO. 2

The entirety of the land is zoned 'Rural' under the City of Wanneroo *District Planning Scheme No. 2* (refer **Figure 4 – District Planning Scheme No. 2 Zoning**).

As above, this Local Structure Plan is expected to facilitate the lifting of urban deferment process and, pursuant to the intent and provisions of the District Structure Plan, also concurrently rezone the land to 'Urban Development' under the City's Scheme.

The 'Urban Development' zone would then facilitate the implementation of the Local Structure Plan.

The objectives of the 'Urban Development' zone are to:

a) Designate land for future urban development;

b) Provide for the orderly planning of large areas of land for residential and associated urban purposes through a comprehensive structure planning process; and

c) Enable planning to be flexible and responsive to changing circumstances throughout the developmental stages of the area.

2.2 DISTRICT STRUCTURE PLAN

2.2.1 EAST WANNEROO DISTRICT STRUCTURE PLAN (2021)

The District Structure Plan (DSP) guides the development of 8.300 hectares of urban land within the broader East Wanneroo locality (refer **Figure 5 – East Wanneroo District Structure Plan** and **Figure 6 – District Structure Plan Extract**, which shows how Precinct 3 is depicted within the DSP).

This Local Structure Plan (LSP) responds to the District Structure plan as follows:

- The proposed land uses are consistent with those set out in the District Structure Plan, including environmental considerations such as the parkland reserves, and infrastructure such as the north-south neighbourhood connector road
- The Primary School has been located south of Elliot Road and centrally within the LSP, in accordance with the DSP. It abuts the north-south neighbourhood connector road reserve to allow for greater connectivity both within the Precinct and to neighbouring precincts.
- The Local Structure Plan depicts densities that are consistent with the objectives of the District Structure Plan and the planned character of Precinct 3; and
- The Local Structure Plan designates a 45-metre-wide Integrator Arterial Road/Rapid Transit Route running east west through the Precinct, along the alignment of Elliot Road, connecting from Lenore Road. It is noted that this alignment is generally consistent with the DSP, although continues along the entire length of Elliot Road (within the Precinct) to avoid existing infrastructure, such as the Church on Lot 11.

2.3 PLANNING STRATEGIES

2.3.1 DIRECTIONS 2031 (2010)

Directions 2031 (2010) establishes the vision for future growth of the Perth Metropolitan and Peel regions. It envisages 'a world class liveable city; green, vibrant, more compact and accessible with a unique sense of place'.

The Local Structure Plan satisfies the objectives of *Directions 2031* in the following ways:

- The Local Structure Plan facilitates urban development that is efficient and equitable in its design and use of resources
- The Local Structure Plan satisfies the density target of 15 dwellings per gross urban zoned hectare
- The proposed development forms part of a planned and integrated growth corridor, and
- The development will help to support the creation and ongoing sustainability and patronage of major public transport and road infrastructure planned for the area

BURGESS DESIGN GROUP | town planning + urban design

2.3.2 NORTH WEST SUB-REGIONAL PLANNING FRAMEWORK (2018)

The *North West Sub-Regional Planning Framework* (2018) sets out an integrated planning framework for land use and infrastructure in this sub-region.

The Local Structure Plan complies with the key objectives of the framework, as follows:

- The Local Structure Plan facilitates urban development consistent with the 'Urban Expansion' classification in the Framework
- The Local Structure Plan responds directly to the ecological values of the site through comprehensive technical analysis and planning that provides opportunities for recreation, landscape retention and management
- The Local Structure Plan promotes a consolidated urban form predicated on the designation of medium density residential uses in a manner that is sympathetic to the suburban character of its surrounds and the existing and proposed services and amenities, and
- The sustainable use and balanced management of resources, infrastructure, bushfire risk, public transport, and other services and amenities

2.3.3 EAST WANNEROO COMMUNITY INFRASTRUCTURE PLAN (2023)

The *East Wanneroo Community Infrastructure Plan (2023)* outlines the extent of community infrastructure required within the DSP area to meet the needs of future populations as urban development expands.

The Local Structure Plan generally complies with the key objectives of the plan, such as the co-location and integration of facilities and the creation of community hubs.

A Neighbourhood Playing Field has been provided abutting the southern boundary of the proposed Primary School site and as central as possible to its catchment area. The field covers an area of 4.5ha and will contribute to the LSP's creditable public open space. This facility is anticipated to meet the needs of the immediate surrounding community in accordance with Table 2 of the East Wanneroo Community Infrastructure Plan (2023).

2.4 PLANNING POLICIES

2.4.1 STATE PLANNING POLICY 3.6: INFRASTRUCTURE CONTRIBUTIONS (2021)

State Planning Policy 3.6: Infrastructure Contributions (2021) sets out the principles underlying development contributions and the form, content, and process for the preparation of development contribution plans.

A district level contribution plan (District DCP) is currently being prepared and assessed (it is being advertised for comment at the time of submission of this LSP) by the City of Wanneroo and the Western Australian Planning Commission, to consider major infrastructure items across the District Structure Plan area. This process and anticipated timing is outlined further in **Section 5.12**.

Given the extent of the proponent's ongoing land assembly within Precinct 3, the need for a Local Developer Contribution Plan (Local DCP) has not yet been determined. This will be subject to further discussion with approval agencies during the LSP assessment process.

2.4.2 STATE PLANNING POLICY 3.7: PLANNING IN BUSHFIRE PRONE AREAS (2015)

State Planning Policy 3.7: Planning in Bushfire Prone Areas (2015) aims to preserve life and reduce the impact of bushfire on property and infrastructure.

Portions of the site and its surrounds are located within a designated bushfire prone area. As such, a **Bushfire Management Plan** has been prepared to address the objectives of the policy and respond appropriately and pro-actively to the bushfire risk, as set out in **Section 3.3** of this report and attached at **Appendix 3**.

2.4.3 CITY OF WANNEROO LOCAL PLANNING POLICY 5.3: EAST WANNEROO (2023)

The purpose of *Local Planning Policy 5.3: East* Wanneroo (2023), as adopted by the City of Wanneroo in November 2023, is to:

1. Provide guidance on the consideration of planning proposals within the East Wanneroo District Structure Plan (EWDSP) area
2. Ensure East Wanneroo is developed in a manner and standard which optimises the development of the public realm, and
3. Supplement the Western Australian Planning Commission's Liveable Neighbourhoods Operational Policy

The objectives of the Local Planning Policy are stated as follows:

1. To ensure any subdivision and development within the EWDSP area will not compromise the progression of development in accordance with the EWDSP
2. Enable the continued lawful use of land in a manner that will not compromise development in accordance with the EWDSP
3. Ensure the vision of the EWDSP and the City's Place Framework is achieved
4. To provide guidelines on road design, including minimum reserve widths and requirements for footpaths and shared paths
5. To provide details for landscaping standards, including street tree selection and landscaping species to be planted within road reserves
6. To develop design standards for parkland links and public open space
7. To outline development standards for works within the public realm
8. To outline information to be submitted to support local structure plans, and
9. To provide local interpretation of the Western Australian Planning Commission's Liveable Neighbourhoods Operational Policy.

This Local Structure Plan complies with the Local Structure Plan requirements of the policy, as follows:

- The District Developer Contribution Plan (District DCP) is currently being prepared in two parts. Part 1 was released for advertising on 20 March 2025 with the comment period closing on 19 May 2025. Part 2 is anticipated to be advertised in mid to late 2025 (refer to **Section 4.3.1 at Part 1** and **Section 5.12 at Part 2**). Formal lodgement and assessment of this Local Structure Plan has been specifically coordinated to be concurrent with the District DCP formulation and advertising processes

- The Local Structure Plan is submitted to help inform the MRS Amendment for regional reserves, specifically as minor variations to some of these elements are proposed

- Precinct 3 will not prejudice development of the broader East Wanneroo District Structure Plan area and development is proposed generally in accordance with the DSP

- The Local Structure Plan is consistent with the requirements of the East Wanneroo District Structure Plan and the Deemed Provisions as demonstrated in **Sections 2.2.1 & 5**.

- A Sense of Place Statement is included in **Section 4** and attached at **Appendix 4**. The Sense of Place statement has been prepared in consultation with the City and addresses the criteria set out in the policy.

- Prior to formal lodgement of this Local Structure Plan informal consultation has continued with the City to progress the resolution of any planning issues identified in the East Wanneroo District Structure Plan, LPP 5.3 and this Local Structure Plan.

2.5 OTHER APPROVALS AND DECISIONS

2.5.1 REQUIREMENTS TO LIFT THE URBAN DEFERMENT

Metropolitan Region Scheme Amendment 1308/41 specified the following items must be addressed prior to lifting the urban deferment across East Wanneroo:

- A District Structure Plan being approved
- Confirmation of the provision of water and wastewater infrastructure
- A District Water Management Strategy being approved by the Department of Water
- The completion of sand extraction activities affecting land within a 500m buffer in the north-eastern portion of the East Wanneroo area, as applicable (note: this is not relevant to the Precinct 3 Local Structure Plan), and
- A bushfire hazard assessment being undertaken to the satisfaction of the Department of Fire and Emergency Services

The requirements to lift the urban deferment have been satisfied as follows:

- The District Structure Plan has been approved by the Western Australian Planning Commission (WAPC);
- Planning for district-level infrastructure is being progressed by the Western Australian Planning Commission, which is supplemented by an **Engineering Servicing Report** (Cossill Webley, 2025 – refer **Appendix 10**) prepared to support the Local Structure Plan
- The District Water Management Strategy (Urbaqua, 2021) has been approved by the Department of Water and Environmental Regulation and is supplemented by a **Local Water Management Strategy** (Hyd2o Hydrology, 2025 – refer **Appendix 8**) prepared to support the Local Structure Plan
- The Local Structure Plan is not affected by the 500-metre buffer for sand resources, and

BURGESS DESIGN GROUP | town planning + urban design

- A Bushfire Management Plan (Emerge, 2025 – refer **Appendix 3**) has been prepared to support future development within the Local Structure Plan area.

2.6 COMMUNITY AND PRE-LODGEMENT CONSULTATION

The intensive coordinated assembly of land within Precinct 3 has been ongoing for more than 5 years, however Burgess Design Group first made contact with the landowner group in June 2011. At that early time, the broader district structure planning framework had not been resolved and notwithstanding keen interest from a number of landowners, a structure plan process could not be progressed.

Informal discussions continued from 2018, with the first formal landowner group meeting occurring in April 2021. The landowner consultation process is highly collaborative, transparent and engaging to ensure every landowner has the opportunity to be involved in, or at least be aware of, the project.

The collaboration process has involved a number of whole of precinct landowner meetings and many individual landowner meetings. The process will continue throughout the assessment of the Local Structure Plan.

In addition to consultation with landowners, the preparation of this Local Structure Plan has included numerous meetings with government agencies and other relevant groups to discuss the various technical elements of the proposals, as outlined in **Table 7**. These agencies and groups have included:

- Department of Planning, Lands & Heritage
- City of Wanneroo
- Water Corporation
- Department of Water & Environmental Regulation
- Department of Education
- Department of Biodiversity, Conservation and Attractions
- Non-government school providers (Association of Independent Schools WA – AISWA)

The consultation process has been, and will continue to be, highly collaborative and inclusive, giving landowners, key stakeholders and government agencies every opportunity to be engaged in discussion as land assembly/acquisition and planning/technical assessment and approval processes continue.

Ongoing liaison and meeting with DPLH, the City of Wanneroo, Department of Education and Water Corporation have been instrumental in shaping the Local Structure Plan and will continue to do so during the assessment period.

TABLE 7: PRE-LODGEMENT CONSULTATION			
AGENCY	DATE	METHOD	OUTCOME
Landowners	March 2021	Direct personal correspondence	Background to planning and land assembly processes
	April 2021	Landowner Group Mtg 1	First whole group meeting
	July 2021	Landowner Group Mtg 2	Second whole group meeting

Local Government	2021 onwards	Phone, emails and meetings	Various communications with City of Wanneroo regarding LSP progress
Dept. of Planning, Lands & Heritage	2021 onwards	Phone, emails and meetings	Various communications with DPLH officers regarding LSP progress
Dept. of Water & Environmental Regulation	2023 onwards	Phone, emails and meetings	Coterra and Hyd2o regarding LSP elements
Dept. of Education	2023 onwards	Phone, emails and meetings	Various communications with DoE offers regarding LSP progress

Environmental Protection Agency	2023 onwards	Phone, emails and meetings	Coterra various communications with EPA regarding LSP progress
Western Power	2024	Investigations	Data base search to confirm power supply
Alinta Gas	2024	Investigations	Data base search to confirm gas supply
Water Corporation	2023 onwards	Phone, emails and meetings	Various communications with City of Wanneroo regarding LSP progress
Telstra and NBN	2024	Investigations	Data base search to confirm available services
Non-government school providers (AISWA)	4 March 2025	Meeting	Meeting with AISWA to discuss school provision within overall EWDSP

3. SITE CONDITIONS AND CONSTRAINTS

The following is an overview of the various site conditions and constraints for Precinct 3. Overall the Precinct is elevated with a depth to groundwater ranging between approximately 10m to 44m, which means, unlike a number of other Precincts within the DSP area, the hydrological impacts on development are minimal.

The primary site constraint to development of the Precinct is bushland, with significant areas of vegetation being retained as both Parks & Recreation and local open space reserves. To facilitate urbanisation of the site and meet the density targets contemplated by the DSP, some of the remaining bushland areas will be developed as shown on the LSP. The final design of the residential areas has been carefully considered to balance planning, engineering, hydrological and transport requirements with environmental values.

3.1 BIODIVERSITY AND NATURAL AREA ASSETS

An **Environmental Assessment Report** (2025) (EAR) has been prepared by Coterra Environment (refer **Appendix 2**) to support the preparation and implementation of the Local Structure Plan. The EAR considers the following environmental factors which have been identified as being relevant to the environmental impact assessment of the Local Structure Plan:

- Terrestrial Environmental Quality
- Inland Waters
- Flora and Vegetation
- Terrestrial Fauna
- Social Surroundings

The main findings of these reports are summarised further below.

3.1.1 TERRESTRIAL ENVIRONMENTAL QUALITY

The following key elements of Terrestrial Environmental Quality include:

- Topography at the site ranges between 52m Australian Height Datum (metres AHD) in the northeastern corner to 84m AHD to the southwestern corner of the site.
- Soils within the site are mapped as comprising Sand derived from Tamala Limestone (Unit: S7).
- Soils at the site are predominantly identified as posing no known Acid Sulphate Soils (ASS) risk. A small area within the northeastern corner of the site is mapped as overlapping a moderate to high ASS risk area.
- The site is mapped by the City of Wanneroo as having a low cave risk.
- No known contaminated sites are located within the site or in the surrounding area.
- Precinct 3 is a rural area which is used for purposes including rural lifestyle living, market gardening, equestrian activities, etc. There is potential that soil and/or groundwater quality could be impacted by current and historical land uses.
- Development of the site can be managed to ensure potential contamination is appropriately assessed and remediated, if required, prior to development. Potential dust generation can be managed through the preparation and implementation of Construction Environmental Management Plan or similar, which will include best practice construction techniques and management practices.

3.1.2 INLAND WATERS

The following key elements of the consideration of Inland Waters are described over page.

BURGESS DESIGN GROUP | town planning + urban design

- Regional mapping by the Department of Water and Environmental Regulation (DWER) indicates that the maximum groundwater level in this location is ranges from approximately 40 to 42m AHD, with superficial aquifer groundwater flow direction being westerly towards the coast (DWER, 2024a).
- Based on topographic elevations this indicates that depth to groundwater varies from approximately 10m below ground level (BGL) to 44m BGL (DWER, 2024a).
- There are no Public Drinking Water Source Areas (PDWSAs) located within the site.
- There are no surface water features present within the site.
- There are no geomorphic wetlands mapped within the site, with the closest wetland being located approximately 280m east of the site (Badgerup Lake to the south-east and Jandabup Lake to the north-east)
- In comparison to the current rural land uses, implementation of the LSP to facilitate future urban development will result in the following predicted outcomes for inland waters:
    - Reduction in nutrient inputs and groundwater abstraction across the site
    - Avoidance of impacts to groundwater quality
    - Maintenance of pre-development hydrological regimes.

3.1.3 FLORA AND VEGETATION

The following key elements of Flora and Vegetation include:

- The site is located within the mapped extent of vegetation association's Spearwood 6 and Bassendean 949, and Karrakatta Complex- Central and South. The site contains approximately 32.9 ha of native vegetation.

- The detailed flora and vegetation survey undertaken in spring 2024 by Ecoscape (2025) for the site identified two vegetation types:
    - BaLOF: Banksia attenuata, Allocasuarina fraseriana and Banksia menziesii low open forest, occupying 14.8%
    - EmmLW: Eucalyptus marginata subsp. marginata, Banksia prionotes and Allocasuarina fraseriana low woodland, occupying 9.6%
- The condition of the vegetation ranged from Completely Degraded to Very Good condition, with the majority of native vegetation in Good or Very Good condition.
- No threatened flora species listed under the Biodiversity Conservation Act 2016 (BC Act) and/or under the Environmental Protection and Biodiversity Conservation Act 1999 (EPBC Act) were recorded during the field survey.
- One Priority 2 flora, Poranthera moorokatta, was recorded during the field survey.
- The floristic community type (FCT) analysis indicated that both vegetation types are most likely FCT 28 - Spearwood Banksia attenuata or B. attenuata-Eucalyptus woodlands.
- One federally listed Threatened Ecological Community (TEC), the Banksia Woodlands of the Swan Coastal Plain ecological community (Banksia WL SCP ecological community) was mapped within site, totalling 17.9 ha (13.3%).
- The LSP proposes to retain 13.0 ha (39.5%) of native vegetation within Parks and Recreation reserve, which comprises 5.8 ha of the EmmLW vegetation unit and 7.2 ha of the BaLOF vegetation unit. The portion of this vegetation which is representative of the Banksia WL SCP ecological community is 9.4 ha (52.2%).
- Areas of retained vegetation in identified Parks and Recreation reserve will be subject to vegetation management, including weed control and targeted revegetation. The details of these works will be outlined within a

Conservation Area Management Plan, or similar, proposed to be prepared at the subdivision stage of development.

- Based on the extent of clearing of Banksia WL SCP vegetation onsite, development proposals would be referred to the Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW) under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). The EPBC Act referral review and assessment process will allow for further assessment of impacts to Banksia WL SCP vegetation and for environmental offsets to be provide, where required.

3.1.4 TERRESTRIAL FAUNA

The following key elements of Terrestrial Fauna include:

- The fauna survey undertaken in February 2025 by Ecoscape (2025) recorded the following conservation listed species:
    - Carnaby's Cockatoo (Zanda latirostris; Endangered under the BC Act and EPBC Act)
    - Forest Red-tailed Black Cockatoo (Calyptorhynchus banksii naso; Vulnerable under the BC Act and EPBC Act)
    - Quenda (Isoodon fusciventer; Priority 4 as listed by the DBCA).
- One fauna habitat occurs within the survey area, described as Banksia Woodland (occupying 24.4% or 32.9 ha) with the remainder not native vegetation or cleared for rural/rural residential land uses.
- The Banksia Woodland habitat type is high-quality foraging habitat for Carnaby's Cockatoos and moderate quality foraging habitat for Forest Red-tailed Black Cockatoos, according to the Bamford scale, and high quality habitat for both species according to the Commonwealth Black Cockatoo referral guidelines habitat scoring tool.

- 95 Black Cockatoo habitat trees were recorded to have suitable diameters (>500 mm), of which 84 were Jarah (Eucalyptus marginata), 5 were Tuart (Eucalyptus gomphocephala), 7 were dead and 2 were other.
- No trees were identified within the site as having hollows with active nests or showing previous use as a Black Cockatoo nest.
- One Jarrah was recorded within the eastern extent of Lot 40 as having potentially suitable hollows without evidence of use.
- 30 trees were classified as trees with large hollows that weren't suitable for Black Cockatoos and 64 as trees currently without large hollows.
- No known roost locations are registered within the site, with the closest recorded roost being approximately 530 m east of the site.
- The LSP proposed to retain approximately 13.0 ha (39.5%) of Black Cockatoo habitat within Parks and Recreation, which comprise of:
    - high value Carnaby's Cockatoo foraging habitat
    - moderate value Forest Red-tailed Black Cockatoo foraging habitat
    - 38 Black Cockatoo habitat trees with suitable diameter.
- Areas of retained fauna and Black Cockatoo habitat in identified Parks and Recreation reserve, will be subject to vegetation management including weed control and targeted revegetation. The details of these works will be outlined within a Conservation Area Management Plan, or similar, proposed to be prepared at subdivision stage.
- A Vegetation and Fauna Management Plan will be prepared and implemented at subdivision stage to prevent damage to fauna habitats being retained, and ensure fauna is appropriately trapped and relocate. It will also include protocols for dealing with displaced/injured animals during clearing and subdivisional works.

- Future development proposals proposing to clear Black Cockatoo habitat will require referral under the Commonwealth EBPC Act. The EPBC Act referral and assessment process will require further evaluation of impacts to Black Cockatoo and for environmental offsets to be provided, where required.

3.1.5 SOCIAL SURROUNDINGS

The following key elements of Social Surroundings include:

- There are no known registered Aboriginal cultural heritage sites or other heritage places within or in proximity to the site.
- There are no known European heritage sites within the site.
- The Department of Mines, Industry, Regulation and Safety (DMIRS) GeoView database does not indicate the presence of any SPP 2.4 Basic Raw Materials extraction sites or exclusions areas within the landholdings.
- The site is not mapped within any strategic freight and/or major traffic routes as identified by State Planning Policy 5.4 Road and Rail Noise.
- Temporary market gardening and other intensive primary industry activities exist within the site and surrounding areas. A number of these gardens have been acquired by the proponent and will remain active, under agreement with the operators, until the time of development. An appropriate interface to those continuing and adjoining gardens will be applied during development, including screen fencing along boundaries and the planting of screening vegetation along adjacent road reserves. Given the developing nature of the precinct, long term continuation of the remaining gardens is considered unlikely.
- Preparation and implementation of a Construction Environmental Management Plan or similar for future subdivisional works, which will include key obligations under the Aboriginal Heritage Act 1972 (AH Act) regarding potential finds of cultural significance, and dust management requirements to prevent loss of surface soils and soil stabilisation requirements.

BURGESS DESIGN GROUP | town planning + urban design

3.1.6 SUMMARY AND FUTURE ACTIONS

This Local Structure Plan for Precinct 3 – Elliot Road will inform future subdivision plans through detailed engineering and planning design phases, as the environmental and planning approvals processes progress. Key features of the Local Structure Plan include:

- Retention of 13.0ha of vegetation within Parks and Recreation reserves
- Development of 19.9ha of land within Urban Development and POS areas
- Retention of Banksia Woodlands TEC where shown
- Retention of Black Cockatoo foraging habitat and habitat trees where shown

To ensure the detailed project design and implementation achieves appropriate environmental outcomes, the following reports and management plans will be prepared at future subdivision and/or development stages:

- Urban Water Management Plan(s)
- Bushfire Management Plan(s)
- Conservation Area Management Plan(s) (if required)
- Vegetation and Fauna Management Plan(s)
- Construction Environmental Management Plan
- ASS Assessment and Dewatering Management Plan, if required

3.2 LANDFORM AND SOILS

The site has an easterly aspect, falling from generally 75m Australian Height Datum (AHD) along the western boundary with Lenore Road (with a peak of 84m at the intersection of Lenore Road with Nicholas Road) , to approximately 52m AHD adjacent to the eastern boundary of Lot 68 Nicholas Road at the south-eastern corner of the site and 52m AHD on Lot 36 Elliot Road at the north-eastern corner of the LSP. A natural low of 55m AHD occurs in the central north of the site adjacent to Elliot Road.

BURGESS DESIGN GROUP | town planning + urban design

Soils within the site are mapped as comprising Sand derived from Tamala Limestone, which is described as 'Sand - pale and olive yellow, medium to coarse-grained, sub-angular quartz with a trace of feldspar, moderately sorted, of residual origin'.

The Department of Primary Industries and Regional Development (DPIRD) soil landscape mapping identifies that the site comprises the Karrakatta Sand Yellow Phase.

3.2.1 ACID SULPHATE SOILS

Acid sulphate soils (ASS) contain iron sulphide materials and are generally present in waterlogged anoxic conditions. In its natural state, ASS do not present any risk to the environment. However, when oxidised (such as when disturbed by excavation for earthworks), ASS produce sulphuric acid, which can pose risks to the surrounding environment, infrastructure, and human health.

Soils at the site are predominantly identified as posing no known Acid Sulphate Soils (ASS) risk. A small area within the northeastern corner of the site is mapped as overlapping a moderate to high ASS risk area.

3.3 BUSHFIRE HAZARD

The majority of Precinct 3 is mapped as being within a designated 'Bushfire Prone Area' under the state-wide '*Map of Bushfire Prone Areas*'.

As such, a **Bushfire Management Plan** has been prepared by Emerge Associates to satisfy the requirements of State Planning Policy 3.7: *Planning in Bushfire Prone Areas (2015)* (refer **Appendix 3**).

The Bushfire Management Plan demonstrates that the Local Structure Plan responds to the bushfire protection criteria in the following ways:

- **Location**

  A landscape assessment determined that the site is a 'Broader Landscape Type A' and therefore satisfies BCP 5 A1.1a. Access roads proposed within the site will provide a legible road network and the site is within close proximity of a suitable destination. The proposal complies with A1.1a.

- **Siting and design**

  All proposed development cells intended to support habitable buildings can accommodate lots that provide sufficient separation from classified vegetation to achieve developable areas of BAL-29 or below.

  Overall the development cells within the LSP are suitably sized , in combination with the public road network, to meet the minimum separation distances required.

  The proposal can comply with A2.1.

  Lots included within future development stages will be required to be managed in a low threat standard. The proposal can comply with A2.2.

  The majority of the LSP is currently cleared, with several remnant or regrowth patches of native vegetation present within the site. The proponent aims to maximise vegetation retention within Parks & Recreation reserves, within public open space and within road reserves, as far as practicable.

  All landscaping outside of the Parks & Recreation reserves will be maintained to a low-threat standard and on this basis, such retention would not change the assumptions within the BMP.

  The proposal complies with A2.3.

- **Vehicular access**

  The existing public roads surrounding the site as well as the proposed public roads can satisfy the requirements of the guidelines and thus the proposal complies with A3.2.

  The proposed interconnected road network ensures the LSP complies with A3.2, although it is noted that the construction of Shenton Road, located at the southern boundary of the LSP area, may be required to satisfy access requirements. This is also important for the existing homes located within adjacent Precinct 2.

  Given the anticipated staging of development, consideration will be given to ensure that all residents and visitors have at least two vehicular access routes during all phases of development. As such the proposal complies with A3.3a.

  The proposed road network has one no-through road located at the north-western corner of the LSP.

This is due to this part of the site being bound by Parks & Recreation reserve to the north and east, with no direct access to Lenore Road to the west. The road at this location has been designed as a loop and meets the minimum technical standards of the guidelines, thus complying with A3.3b.

Given the LSP has perimeter roads for all residential and commercial areas where they abut identified or proposed bushland and the primary school is provided with a managed POS interface which provides separation to the proposed Parks & Recreation reserve, compliance with A3.5a is achieved. Neither A3.5b nor A3.6 are applicable.

- **Water**

The LSP will be serviced by a reticulated water supply and will thus comply with A4.1. Neither A4.2 nor A4.3 apply.

Updated Bushfire Management Plans, or as a minimum a 'Bushfire Statement' will be required to support applications for subdivision approval within bushfire prone areas of the site and give due consideration to the **Bushfire Management Plan** contained at **Appendix 3** together with applicable policy requirements.

These management plans will also detail appropriate responses to any temporary bushfire risks as development progresses throughout the site.

In the interim, all landowners are required to comply with the requirements of the City of Wanneroo's annual firebreak notice to maintain fuel loads at minimal/appropriate levels.

3.4 HERITAGE

The Local Structure Plan area does not include any registered Aboriginal Heritage Sites per advice received from officers of the Department of Planning, Lands and Heritage (dated 10 September 2024), nor does it contain any registered European Heritage Sites.

3.5 LAND OWNERSHIP

The Structure Plan encompasses a little over 140ha of land spread across 38 separate lots (plus a drainage reserve vested with the City of Wanneroo) and dissected by two existing roads, Elliot Road and Nicholas Road. Fragmented land ownership can pose a constraint to the efficient and effective implementation of a Local Structure Plan, however, the proposed LSP has been specifically designed to address this important consideration.

Details of the current landownership are provided at **Appendix 1 – 'Legal Description and Ownership'**.

It should be noted, the total number of landholdings under the control of Satterley Property Group extends well beyond those listed under their ownership, with numerous additional properties being subject to acquisition agreements that have not yet settled.

The Local Structure Plan has been carefully designed to facilitate orderly development as land assembly continues, with primary connecting roads specifically incorporated into land held by the proponent.

Where possible, and efficient, the design has adopted existing lot boundaries to minimise development impacts on landholdings not yet acquired. This also applies to Lot 61 Nicholas Road, the design of which remains completely independent of the abutting properties, given the aspirations of that landowner to stay living in the area for the longer term.

Similarly, the design of the LSP has carefully integrated the existing Church on Lot 11 Elliot Road. The LSP proposes a private rear boundary interface to the western side of the Church property, with a road interface along the site's eastern boundary, providing ample opportunity for the Church to further develop their site and consider their long term access and parking. The design also ensures the LSP doesn't prejudice the future redevelopment of the site for residential housing.

Importantly, the central north-south Neighbourhood Connector B road has been designed to sit within landholdings controlled by the proponent to ensure it can be delivered to provide suitable connectivity through the site, particularly to the local Primary School.

The LSP design also utilises the existing local roads to provide a legible network of higher-order connectivity, sets out residential cells in an orderly manner and retains significant vegetation and natural landscape assets (such as tree avenues) to provide an overall net benefit to the community.

Importantly, the technical assessment of the site and preparation of the Local Structure Plan has been undertaken in a fair and equitable manner in accordance with residential development policy guidance, with land uses placed to respond specifically to technical requirements. For instance, the Primary School is located south of Elliot Road abutting the proposed north-south neighbourhood connector and as central as possible to its catchment. Its position allows for greater circulation around the school and connections to neighbouring precincts. The primary school is shared across a number of land parcels and on one of the flatter, yet slightly elevated, portions of the site.

Parks & Recreation reserves have been proposed generally in accordance with the DSP, with areas of local public open space positioned to protect other local bushland or environmental assets and to provide for drainage. The Neighbourhood Playing Fields have been positioned centrally, adjacent to the Primary School (to facilitate shared use) and abutting the north-south neighbourhood connector road in order to provide a high-level of access.

The LSP aims to provide for efficient and equitable development across the site for all landowners, whilst also reflecting the objectives (including environmental) of the DSP.

4. LOCAL SENSE OF PLACE STATEMENT

4.1 LOCAL PLANNING POLICY 5.3

The City of Wanneroo's Local Planning Policy No. 5.3 provides guidance for the consideration of planning proposals within the East Wanneroo District Structure Plan (DSP) area. One of its key objectives is to "*ensure the vision of the EWDSP and the City's Place Framework is achieved*".

The Policy also contains a District Sense of Place Statement (DSoPS), which suggests

"Places are defined by their location and the era they were created, which evolves over time as people interact with and change that place. Great places evolve without losing their unique character or sense of place."

The DSoPS comprises five components

1. **Principles**: critical factors that the community want to see reflected throughout the development.
2. **Themes**: the key categories that define sense of place in East Wanneroo.
3. **Elements**: distinguishing places, locations, or design features that need to be capitalised on, planned for, or realised through the planning process for sense of place to be retained or enhanced as urbanisation progresses.
4. **DSoPS Map**: Illustrates the key aspects and elements that are unique to East Wanneroo that contribute to sense of place and require consideration.
5. **Guidance for Local Sense of Place Statements**: provides context and direction to inform the subsequent preparation of Local Sense of Place Statements (LSoPS) by development proponents.

The DSoPS concludes with the following statement and response:

"You know you're in East Wanneroo because...

...you are surrounded by mature trees and native vegetation that connects you to a network of wetlands through discrete pedestrian links. Local Aboriginal, pioneer, market gardening and equestrian heritage is evident in park and open space design and new development is integrated into and respects the landscape...

... future development will feature consistent design outcomes for landscaping, streetscapes, parkland links, public open space, and community facilities that reflect the culture and history of the area ..."

The Policy requires proponents to prepare a local Sense of Place statement, in consultation with the City, as part of the Local Structure Plan. Much of the information to be provided within the statement is already required (and has been included) under Part Two of the Local Structure Plan, however, additional elements include:

1. Local Sense of Place Statement Overview

    a. Local Structure Plan Area
    b. Overview of LSP Characteristics
    c. History and Heritage
    d. Key links to Regional Locations
    e. Overview of Sense of Place Intent

2. Principles, Themes and Elements & Local Structure Plan Response

A Local Sense of Place Statement has been prepared for the Local Structure Plan, as included at **Appendix 4**. A summary of the key elements of which is provided below. These elements are summarised in the Local Sense of Place Statement to focus on place outcomes, notwithstanding being included in detail within both Part 1 and Part 2 of the LSP. An overview of the various elements of LSoPS is provided below.

4.2 LOCAL SENSE OF PLACE STATEMENT OVERVIEW

4.2.1 LOCAL STRUCTURE PLAN AREA

The Local Sense of Place Statement (LSoPS) provides context for the Local Structure Plan area with regard to its physical location, overall area/boundaries and access points.

4.2.2 OVERVIEW OF LSP CHARACTERISTICS

This part of the LSoPS includes a description of the relevant demographic characteristics of the place, it's environmental features, topography, vegetation, flora & fauna, points of difference and existing features to be retained. The demographic overview includes profiles of age, income, house typologies, population density and household sizes.

4.2.3 HISTORY AND HERITAGE

The LSoPS also considers the history and heritage of the area, including the historical ownership of the land parcels (where known), Indigenous and European characteristics and any significant historical events.

4.2.4 KEY LINKS TO REGIONAL LOCATIONS

In this part of the LSoPS the points of interest, activity centres, transit nodes, important landforms, parkland link routes and points of integration across LSP boundaries are considered.

4.2.5 OVERVIEW OF SENSE OF PLACE INTENT

This part of the LSoPS considers relevant place outcomes, as identified in the DSP that are specific to Precinct 3, including elements such as:

- Evidence of understanding of local community values
- identification of place principles, themes and elements additional to those outlined in the DSP
- an outline of the local place vision for Precinct 3

4.3 PRINCIPLES, THEMES AND ELEMENTS & LSP RESPONSE

The information included in this part of the Local Sense of Place Statement is generally reflected in Part 1 of the LSP and provides a basis for the design and development response proposed for the Precinct. It includes:

- Demonstration of how the various principles, themes and elements set out in the DSoPS are addressed within Precinct 3
- How the LSP has been designed and implemented to protect the key sense of place elements
- How the design response contributes to the local sense of place where place elements can't be protected through development
- How the design response contributes to achieving the DSP's vision for East Wanneroo
- A description of any unique design elements, public art, materials and colours (overall project theming) for Precinct 3

Refer **Appendix 4** for full details of the **Local Sense of Place Statement**.

BURGESS DESIGN GROUP | town planning + urban design

5. LAND USE AND SUBDIVISION REQUIREMENTS

5.1 DESIGN AND LAND USE

The proposed land uses within the Precinct 3 Local Structure Plan area include low and medium density residential uses, a commercial centre, a primary school, public open space/drainage, reserves to accommodate areas of Parks & Recreation (as indicated on the DSP) and Neighbourhood Playing Fields, the latter as required under the City of Wanneroo's Community Infrastructure Plan (refer **Figure 7 – Local Structure Plan Map (with roads)**.

5.2 PUBLIC OPEN SPACE

The Local Structure Plan proposes 11 parcels of public open space; encompassing 11.9779ha of land, representing 8.49% of the gross site area of which 10.7479ha is creditable, being 10.03% of the Net Subdivisible Area (refer **Appendix 5 – Public Open Space Schedule**).

Public open space is to be provided generally in accordance with **Plan 1 – Structure Plan Map** and **Appendix 5 – Public Open Space Schedule**. In addition, **Plan 2 – Public Open Space and Schools Map** has been provided to illustrate the distribution of the various areas of public open space across the different landholdings within the LSP area to simplify its implementation.

5.2.1 DESIGN RATIONALE & FUNCTION

Public Open Space (POS) has been designed to provide for both active recreation spaces and passive nature parks.

As such, the POS distribution proposed within the LSP preserves existing vegetation, provides active play spaces to maximise accessibility and social amenity for future residents, and integrates drainage functions to adhere to water sensitive urban design principles.

CITY OF WANNEROO

Portions of the LSP area are also proposed as Parks & Recreation reserves to retain existing bushland as contemplated by the DSP. This includes the vegetation across the northern portions of Lots 29 to 34 Elliot Road and parts of Lots 66 & 67 Nicholas Road, as shown as 'Rural' under the MRS (excluded from the 'Urban Deferred' zone).

Lots 42 & 43 Elliot Road and part of Lot 62 Nicholas Road were also considered for future Parks & Recreation, being shown as 'Parklands – Subject to Confirmation' under the DSP.

Following extensive environmental surveys and in consideration of the significant quantum of bushland being retained within the Precinct (noting the gross area of green space being provided represents some 19.45% of the overall land area of the Precinct), the Local Structure Plan proposes to retain the majority of Lot 43 as Parks & Recreation reserve, with Lots 42 and 62 being primarily developed for residential purposes. The **Environmental Assessment Report** at **Appendix 2** details the environmental considerations that are likely to apply to this proposal.

Table 8 below provides a summary of the size and intended function of each area of public open space: A **Landscape Masterplan** is attached at **Appendix 6** detailing the design and function of each of the public open space areas.

Table 8: POS Classifications

POS No.	Gross Area (ha)	Deductions	Net area (ha)	Category	Function
1	0.2382	-	0.2382	Local	Nature
2	0.2339	-	0.2339	Local	Nature
3	0.6817	-	0.4946	Neighbourhood	Recreation & nature
4	0.6734	-	0.4243	Local	Recreation
5	1.3850	-	0.8595	Neighbourhood	Recreation
6	0.8030	-	0.5322	Local	Recreation
7	0.5397	-	0.5397	Local	Recreation
8	4.5003	-	4.5003	Neighbourhood	Recreation
9	0.4809	-	0.3568	Local	Recreation
10	1.7317		1.5522	Neighbourhood	Nature
11	0.7101		0.3840	Local	Recreation

Parks and Recreation Reserves

The northern Parks & Recreation Reserves have been shown on the LSP to reflect the associated 'Parklands' designation on the DSP, including the location of the southern boundary of the reservation.

The vegetation in this area is a mixture of 'very good', 'good', 'degraded' and 'completely degraded', as shown in the **Environmental Assessment Report** at **Appendix 2**.

Some of the existing vegetation located south of the identified 'Parklands' area is proposed to be cleared to facilitate efficient residential development in order to meet the density objectives of the DSP. Conversely, the 'Parklands' area at the rear of Lots 32, 33 and 34 Elliot Road is degraded or completely degraded and will be rehabilitated.

A series of pathways will be provided through this area to facilitate controlled access, as shown in the **Landscape Masterplan** attached at **Appendix 6**.

Public Open Space

The distribution of Public Open Space throughout the Precinct 3 – Elliot Road Local Structure Plan area has been carefully considered in relation to the objectives of Liveable Neighbourhoods, as outlined below:

1. To ensure that public open space of appropriate quality and quantity is provided in a timely manner to contribute towards the recreational and social needs of the community in appropriate locations
2. To integrate urban water management functions with public open space
3. To facilitate the provision of land for community facilities, such as the Neighbourhood Playing Fields, as part of land ceded for public open space
4. To provide public open space that is safe and overlooked by nearby dwellings

5. To facilitate the provision of the public open space contribution and its development as part of the subdivision process and to enhance local amenity
6. To ensure that public open space is integrated into the urban structure to produce both land use efficiency and long-term sustainability
7. To provide for public open space that best reflects local community requirements

Further, the proposed distribution of Public Open Space also meets relevant requirements such as to:

- Provide a balance between conservation and active and passive recreational uses in district, neighbourhood and local open spaces;
- Support legibility of the urban environment and the establishment of neighbourhood identity by incorporating natural and cultural features and landmarks
- Incorporate land for connected or linear open space for walking and cycling
- Provide parks for a combination of passive (informal play areas) and active (formal playing fields)
- Provide for neighbourhood parks for active (informal sports/play areas) and passive use
- Provide for local parks in a safe walking distance from all dwellings
- Take into account shared use of open space (such as the Neighbourhood Playing Fields and Primary School)
- Incorporate drainage wherever practicable using contemporary urban water management principles
- Accommodate water-sensitive urban design in public parkland areas where usability for recreation purposes has not been compromised or where conservation values are enhanced

The following is an overview of the public open spaces provided within the Local Structure Plan.

BURGESS DESIGN GROUP | town planning + urban design

POS 1, POS 2 and POS 3 abut the Parklands area, providing an opportunity to create a landscaped and active edge to the bushland, together with localised drainage. This landscaped edge and the adjacent 20m wide road corridor also provide suitable buffering to the future residential allotments for bushfire management purposes.

POS 4 is located at an edge of the Precinct and to service the residential dwellings in this area that are anticipated to be developed to a higher density given their proximity to the future District Shopping Centre in abutting Precinct 12.

POS 5 is located central to and abutting Elliot Road. This public open space area will be a focus for the first stages of development, creating an active landscaped space, incorporating localised drainage and also containing the permanent waste water pumping station.

POS 6 is located north of and opposite the Primary School. This park will provide for some minor active pursuits and serve a local park function for surrounding residential development.

POS 7 is located at the southern end of the proposed Parkland reservation on Lot 43 Elliot Road. This park will provide a local activity space for residents, together with a managed interface to the Parkland.

POS 8 is the Neighbourhood Playing Fields, provided at an area of 4.5ha to meet the requirements set out in the City of Wanneroo's Community Infrastructure Plan. The playing fields are collocated with the Primary School and also abut the Parks & Recreation reserve proposed on Lot 66. A linear public open space strip extends from the playing fields along the boundary of Lot 65 and past the Primary School. This strip, which is subject to further detailed design at the subdivision and development stage, provides an opportunity for vehicular access and parking to service the playing fields and also acts as a managed buffer to the Parkland for bushfire management purposes.

POS 9 also provides an edge to the Parkland, together with localised drainage, including that associated with abutting Benmuni Road.

BURGESS DESIGN GROUP | town planning + urban design

POS 10 serves a dual function, retaining some very good quality vegetation together with providing actives spaces for local recreation.

POS 11 provides for local recreation, drainage (as a natural low point in the Precinct) and also accommodates the temporary waste water pumping station.

5.3 RESIDENTIAL

5.3.1 DWELLING TARGET & POPULATION

The Precinct 3 – Elliot Road Local Structure Plan is expected to yield 1,856 dwellings across a total of approximately 63ha of net residential land. This provides a density of 29 dwellings per net residential hectare and 17.3 dwellings per site hectare (net subdivisible area). This satisfies the minimum density targets of 15 dwellings per urban zoned hectare set out in *Directions 2031* and 22 dwellings per site hectare set out in *Liveable Neighbourhoods (2009)*.

An average of 3 persons per household would provide for a total population of approximately 5,568 people within the Local Structure Plan area. This is generally consistent with household sizes within Wanneroo as of the 2021 Census (*Australian Bureau of Statistics*) and is the population density adopted in the **Retail Needs Assessment and Net Benefit Test** report attached herewith at **Appendix 9**.

5.3.2 DENSITY

The Local Structure Plan has been designed to adopt a site-responsive approach to the designation of residential density codes, according to the following criteria:

I. A base code of R30

II. R40 for lots:

   a. at the end of residential street block cells

   b. within 250m of public open space or Parks & Recreation reserves

   c. abutting or directly opposite the primary school

   d. with frontage to a Neighbourhood Connector or Integrator Arterial road; and/or

   e. within 500m of a public transport stop or equivalent

BURGESS DESIGN GROUP | town planning + urban design

III. R60 for lots:

a. within 250m of a public transport stop or equivalet; and/or

b. to which II applies that also:

i. have access to a laneway; and/or

ii. are over 600m² in area that are to be developed for grouped or multiple dwellings*.

**Note: Section III b ii is not intended to facilitate the re-subdivision of sites for green-title or survey-strata lots. If this is proposed, a new density code plan shall be submitted that complies with the criteria listed above.*

IV. Up to an R80 density for development on lots within the Urban Neighbourhood residential catchment of the District Shopping Centre as shown on the DSP and designated Residential R40-R80 on the LSP.

This approach, which is also being applied across other East Wanneroo local structure plans, provides flexibility to accommodate changes to the layout and lot typology of the Local Structure Plan without the need for numerous administrative changes and amendments, and allows for the consideration of residential density codes specific to the design and lot layout of subdivision applications as they are made over time.

This is particularly applicable as the District Shopping Centre development progresses within Precinct 12 and provides a catalyst for a broad range of housing typologies.

5.4 HOMESTEAD LOTS

Burgess Design Group and Satterley Property Group are leaders in developing projects which comprise fragmented landownership. This form of development requires land assembly, which involves extensive negotiations and collaboration with a multitude of landowners, normally over long period of time, to realise an opportunity to create a cohesive residential development project.

Similar to the majority of the East Wanneroo DSP area, the land tenure within Precinct 3 is generally characterised by long term ownership, with many landowners having lived on their properties for 20 to 40+ years. Often there are also considerable lifestyle-based improvements together with significant sentimental value.

BURGESS DESIGN GROUP | town planning + urban design

Often landowners seek to retain their homes and sell only their residual (or 'balance') land to a developer. In these circumstances the landowners enter into a 'Retained Land' agreement with the developer group.

In many cases, retaining their home is the deciding factor for a family to enter into a sale agreement with a developer. However, it should be acknowledged that the inclusion of Homestead Lots within a Local Structure Plan creates inefficiencies, can have an impact on streetscape, amenity and landform, and should ideally be avoided where possible.

5.4.1 HISTORICAL PRACTICE

Homestead Lots have been incidentally created throughout the Perth Metropolitan Region as areas of fragmented land are subdivided. This has allowed development to progress.

Traditionally, and in accordance with conventional subdivision/development policy, the servicing of these lots (being the connection of reticulated water, sewer, power and communications) would be required as the development front reached the location of the home being retained.

The provision of a new title for the Homestead Lot is very important to the landowner as it gives them the ability to raise funds against the property or transfer/deal on the property if needed (the latter particularly for elderly residents).

It is essential that uncertainty for landowners during the period between selling their property (based on a value for the residual land) to the developer and receiving their title is minimised. As part of the acquisition agreement, the developer agrees to pay for and facilitate connection of necessary services to the Homestead Lot, plus provide the title, at the appropriate time.

5.4.2 PLANNING AND DESIGN CONTEXT

Prior to considering a Homestead Lot, it is essential to identify how the lot will be integrated with the overall development of the area.

There are a number of key considerations, including:

1. Road access and orientation
2. Lot size
3. Improvements
4. Future development opportunities

Road access and orientation is to provide for entry and exit to the site as efficiently as possible, in most circumstances with the orientation (frontage and driveway location) as per its existing configuration.

In some cases, the driveway may connect to a road that is planned to be considerably upgraded as part of the residential development of the area (such as Elliot Road), ultimately carrying volumes that preclude direct access under planning policy. In these circumstances the existing driveway may need to be retained to service the homestead until an alternative access arrangement can be provided as part of the ongoing development of the Precinct.

Importantly, alternative access to a subdivisional road will be required upon future redevelopment of the Homestead Lot.

5.4.3 LOT SIZE

The size of the Homestead Lot should be minimised as far as possible to retain only the existing home and any necessary improvements, ideally between 1,000m^2 and 2,000m^2. It is recognised that the smaller the site the more easily it can be incorporated into the future development area.

In some circumstances, a larger lot may be required, whether due to the location of the existing dwelling or to incorporate specific landscape features. The Retained Land on Lot 31 Elliot Road is an example of a larger Homestead Lot, which is this case is due to the extensively landscaped and maintained gardens.

Where a home has a large setback to an existing street, the size of the Homestead Lot may need to be greater in order to incorporate the frontage, such as on Lot 71 Nicholas Road.

BURGESS DESIGN GROUP | town planning + urban design

There are other considerations, such as vegetation or topography that may also influence the design of the Homestead Lot (and/or its ability to be retained).

In some circumstances, the Homestead Lot will be developed at the time of the adjacent subdivision, as landowners decide to move out of the developing area due to conflicting lifestyle aspirations. It is thus important to design the Homestead Lots to be easily integrated into the surrounding residential fabric.

5.4.4 FUTURE DEVELOPMENT

As above and notwithstanding the size of the retained Homestead Lot, it is essential it be carefully integrated into the Local Structure Plan for future redevelopment. The design of Homestead Lots should reflect the dimensions of prevailing street block depths or be located on street corners.

These configurations will allow for the Homestead Lot to be easily subdivided and redeveloped at a future time, which is essential to the efficiency of the Local Structure Plan. Often the Homestead Lots are up-coded such that when redeveloped at a future time, they can provide some alternative housing forms into the developing urban area. This approach has been taken with the six Homestead Lots shown on the Local Structure Plan, each being designated as Residential R40-R80.

It is also important that a Homestead Lot is not configured in any way that would prejudice future development within the Local Structure Plan area, such as restricting the continuation of key roads or infrastructure.

The design of the Precinct 3 Local Structure Plan has been conceived in this way.

5.4.5 INFRASTRUCTURE BOND

The Homestead Lots should be titled as soon as practical after acquisition and settlement of the balance land by the developer. This would normally occur upon Local Structure Plan approval, which ensures an appropriate and integrated design outcome has been achieved and there is certainty for the developer.

For titles to be issued for the Homestead Lots ahead of the development front, the developer could pay an Infrastructure Bond to the Local Government.

This bond is to pay for the future connection of all necessary services (as required under relevant planning policy).

In the interim period, the Homestead Lot remains serviced by its existing water supply, leach drains/septic tank system and power supply.

Although the Homestead Lots proposed on Lots 10, 4, 31 & 32 Elliot Road are likely to be created as part of early stages of development and thus be serviced in the short term, the Retained Land on Lot 37 Elliot Road is likely to be serviced in the longer term. An infrastructure bond may be appropriate for the earlier titling of this Homestead Lot.

A Homestead Lot is not required to be designed to retain all of the existing service locations (such as leach drains/septic systems) within its boundaries, provided an easement is put in place by the developer on the Balance Land that is being acquired, giving access rights to the infrastructure that currently services the Homestead Lot.

Once the ultimate services are connected to the Homestead Lot this redundant infrastructure and any associated easements are removed.

5.5 MOVEMENT NETWORKS

A **Transport Impact Assessment** report has been prepared by Transcore to assess the impacts of development on the existing and proposed movement network (refer **Appendix 7**). This report found that development within the Structure Plan area is expected to generate a total of 20,230 vehicle movements per day (internal to external or external to internal) upon completion.

Planned upgrades to the surrounding road network and the design of the internal road network are sufficient to cater for the development, as set out in the proceeding sections.

5.5.1 EXISTING ROAD NETWORK

Future upgrades and extensions are proposed to the existing regional road network, such as;

- Whiteman Yanchep Highway, a new north-south highway to the east of Precinct 3, is intended to function as a primary distributor road for the north-west traffic. It is proposed to intersect with Gnangara Road, Elliot Road, Lakeview Road and Flynn Drive
- Franklin Road is proposed to be extended from Lenore Road to Flynn Drive
- The Gnangara Road – Ocean Reef Road corridor is proposed to be upgraded to a primary distributor

In addition, the existing internal road network is to be upgraded as set out in **Table 9** below, noting Lenore Road has already been widened and upgraded by the City:

TABLE 9: UPGRADES TO EXISTING ROADS			
ROAD	EXISTING WIDTH	PROPOSED WIDTH	PROPOSED CLASSIFICATION
Elliot Road	20m	45m	Integrator Arterial Road / Rapid Transit Route
Benmuni Road	20m	25m	Neighbourhood Connector A

Road widening should generally be accommodated equally on either side of the road, equidistant from the centreline. It is anticipated the widening of Benmuni Road will occur in this way.

Elliot Road has been designed with minor deviations to the road widening and alignment, both north and south of the existing road corridor, to accommodate for homestead lots which provide significant identity and sense of place to the locality. The alignment of Elliot Road has also been slightly modified from that shown on the DSP, as agreed with DPLH and City of Wanneroo planners. The DSP alignment shows Elliot Road deviating south-east across Lots 40, 41, 10, 11, 37 & 38 Elliot Road, generally lining up with Jambanis Road at the eastern extent of the LSP area.

BURGESS DESIGN GROUP | town planning + urban design

This deviation traversed the existing Church site on Lot 11 Elliot Road. The Church has significant existing infrastructure and proposals for additional future development. The proposed realignment of Elliot Road, as shown on the LSP, facilitates the retention of the Church and its associated infrastructure.

5.5.2 PROPOSED ROAD NETWORK

A legible and robust network of higher order 'Integrator' and 'Neighbourhood Connector' roads provide a consistent hierarchy and will convey traffic efficiently throughout the Local Structure Plan area. Local access streets will accommodate relatively low volumes of low-speed local traffic in a pedestrian and cyclist friendly environment within each of the residential precincts.

The main arterial roads within, or directly abutting, the LSP area are Lenore Road running north south within the western boundary and Elliot Road running east west through the middle of the LSP area. Ultimately, traffic volumes in the order of 40,000 to 46,000vpd are forecast on Lenore Road and 15,000 to 18,000vpd on Elliot Road.

Five key intersections along Lenore Road and Elliot Road within the LSP area have been analysed to determine likely future intersection requirements. The LSP shows roundabouts at three of these locations.

The proposed signalised intersection of Lenore Road and Nicholas Road will assist pedestrians and cyclists crossing Lenore Road at that location. Additional pedestrian facilities should be planned across Lenore Road and Elliott Road in the vicinity of the proposed local centre at the timing of development of that site.

5.5.3 PUBLIC TRANSPORT NETWORK

TRANSIT SERVICES

The Local Structure Plan accommodates a future 'Rapid Transit Route' running east-west through the site along Elliot Road.

BURGESS DESIGN GROUP | town planning + urban design

As detailed in the East Wanneroo DSP, a transit station is proposed to be provided to the east of the Local Structure Plan area within the District Centre located in the abutting Precinct 12. This is proposed to provide high-quality and frequent public transport access for residents to the METRONET network.

The DSP shows the 'Rapid Transit Route' containing an 'Integrator Arterial Road' for the provision of greater connectivity between the centre and suburban neighbourhood and allows for the implementation of a rapid bus system once the design review is completed by State Government.

Figure 7 – Local Structure Plan Map (with roads) shows the 'Rapid Transit Route' in an alternative alignment to the one specified in the DSP, as described previously above.

It should also be noted that the DSP shows a 'Transit Corridor' cutting across the north-eastern corner of the LSP (across Lots 34, 35 & 36 Elliot Road) in an 'underground' configuration. This was anticipated to be a railway line in tunnel for this section of the Transit Corridor, however, it is understood that the WAPC have reconsidered this proposal and potentially opted for an alternative form of transportation via dedicated rapid bus. The details of this rapid bus proposal are still evolving. The LSP incorporates additional widening (out to 45m) for Elliot Road to accommodate this service if needed.

BUS SERVICES

The closest existing bus route to the subject site is Route 467: Whitfords Station – Joondalup Station. The closest bus stops for route 467 are approximately 600m west of the LSP area along Wyatt Road, as detailed in section 3.5 of **Appendix 7**.

5.5.4 CYCLE NETWORKS

Existing bicycle facilities in the surrounding area are illustrated on the Perth Bike Maps published by the Department of Transport, as shown in Figure 7 of **Appendix 7**. That Bike Map dates back to 2016 and does not show existing facilities on Lenore Road, which has on-road bike lanes and a 2.5m shared path on the western side. There are currently no bicycle facilities on Elliot Road, Nicholas Road and Benmuni Road within the LSP area.

High-level future planning for cycling facilities is now set out in Western Australia's Long Term Cycle Network (LTCN), which identifies an aspirational blueprint to ensure State and local governments continue to work together towards the delivery of a continuous cycling network providing additional transport options, recreational opportunities and support for tourism and commercial activity. The LTCN identifies the function of a route - primary, secondary or local - rather than the form it should take.

A primary route is planned on Lenore Road on the western side of the LSP area. Elliot Road is planned as a secondary route in this area. A number of local routes are also shown in this area including Nicholas Road and Benmuni Road, refer **Appendix 7**.

An extensive network of on road cycle lanes, shared paths, and pedestrian footpaths will be installed throughout the precinct as development progresses (refer **Table 10** below).

Table 10: Typical Pedestrian and Cyclist Networks		
Road type/area	Cycling facilities	Pedestrian facilities
Integrator A	On-road cycle lanes (x2)	Pedestrian paths (x2)
Neighbourhood connector A	On-road cycle lanes (x2)	Pedestrian paths (x2)
Neighbourhood connector B	Shared path (x1)	Pedestrian path (x1)
Access street A	Shared path (x1)	Pedestrian path (x1)
Access street B	Shared path (x1)	Pedestrian path (x1)
Access street C & D	On-road (shared)	Pedestrian path (x1)
Safe Active Street	On-road (shared)	Pedestrian path (x1)

5.6 WATER MANAGEMENT

A **Local Water Management Strategy** has been prepared by Hyd2o Hydrology that details how all forms of water, including groundwater, stormwater and potable water will be managed in accordance with the Better Urban Water management guidelines – refer **Appendix 8**.

The recommended approach to water management for the structure plan area includes:

Water Efficiency

- Use of water efficient fixtures and fittings
- Use of native plantings in POS / stormwater management areas
- Maximise infiltration of stormwater at source
- Retention of Bushland and native vegetation POS areas

Water Supply

- Water Corporation IWSS for lots with rainwater tanks optional
- POS Irrigation via Superficial Aquifer and existing licences
- No long-term irrigation of conservation areas/Public Open Space

Wastewater

- Water Corporation reticulated sewerage

Ecological Protection/Water Quality

- Implement both structural and non-structural controls
- Use of soakwells at lot scale to retain 15mm on site
- Local centre to retain all stormwater on site up to 1% AEP event
- Total storage volume of 3684 m^3 and area of 1.23 ha required for biofiltration systems to treat and infiltrate 15mm events. representing approximately 0.9 % of total site area
- Local scale street scale measures to be detailed at UWMP stage in consultation the City of Wanneroo and project civil engineers

Serviceability

- Road drainage system designed so roads will be passable in the 20% AEP event
- The total area required for management of the 20% AEP event is approximately 1.86ha or 1.4% of the total site area with a total detention storage volume of approximately 6909 m^3

Flood Protection

- Provide flood paths for overland flows which exceed the capacity of piped drainage
- Establish minimum habitable floor levels at 0.3 m above the 1% AEP event flood level in local drainage network
- The total area within the site required for flood storage up to the 1% AEP event is approximately 2.53 ha or 1.9% of the total site area, with a total detention storage volume of approximately 22103 m^3
- Establish minimum habitable floor levels at 0.5m above the 1% AEP event flood level of stormwater storage areas

Fill & Subsoil Drainage

- Natural surface in excess of 9m above existing groundwater
- No subsoil required and site unaffected by potential future groundwater rise in Urbaqua(2021)
- Earthworks for the site will comprise a cut and fill operation. Some fill may be required to meet gradient requirements, level lots, and interface with existing site boundaries and infrastructure

ASS & Contamination

- No known risk of Contamination nor Acid Sulphate Soils

BURGESS DESIGN GROUP | town planning + urban design

The framework set out within the Local Water Management Strategy will be refined through the preparation of urban water management plans, at the subdivision and development stage, as development progresses.

5.7 EDUCATION FACILITIES

The Local Structure Plan incorporates one government Primary School site as shown on the **Local Structure Plan Map (with roads)** at **Figure 7**.

WAPC Operational Policy 2.4 Planning for School Sites requires one government primary school for every 1,500 lots. The Local Structure Plan area is expected to yield in the order of 1,753 lots; and thus requires 1 primary school. The site has been located to respond to the following criteria:

- The site is a minimum of 3.75ha in area, being collocated with the Neighbourhood Playing Fields and including sufficient area to incorporate a childcare facility, consistent with current policy requirements
- Central to the planned catchment
- Located on land with suitable topography/levels
- With easy access to higher order roads (to maximise accessibility by different transport modes) and lower order access streets (to disperse parking)
- To be as regular shape as possible, with due regard to the above
- To minimise any potential bushfire impacts from nearby or adjacent areas

A **School Site Indicative Development Plan** is included at **Figure 8**. This plan shows how the Primary School site may be developed within the Local Structure Plan area, including the intention for the oval facility to be shared with the abutting Neighbourhood Playing Fields.

The Primary School site and abutting Neighbourhood Playing Fields have street access on three sides. Neighbourhood Connector B roads, including Nicholas Road, provide for high level access and traffic circulation as required.

FIGURE 8. SCHOOL SITE INDICATIVE DEVELOPMENT PLAN
PRECINCT 3 - ELLIOT ROAD
EAST WANNEROO

BURGESS PO Box 6779, Perth Business Centre 6849 P (08) 9328 6411 Plan No: SAT PR3.07-10a-01 Client: SAT CITY OF WANNEROO

A Parks & Recreation reserve is proposed on Lot 66 Nicholas Road, as depicted on the DSP. A public open space reserve (POS 8) separates the bushland area from the Primary School site to mitigate bushfire risk.

5.8 NEIGHBOURHOOD CENTRE

A **Needs Assessment and Net Benefit Test** report is attached at **Appendix 9** to guide the assessment for a planned Neighbourhood Activity Centre within Precinct 3 of the East Wanneroo District Structure Plan. A summary of the report findings is below.

The Neighbourhood Activity Centre is planned to be located on the north-east corner of the intersection of Lenore and Elliot Roads.

5.8.1 DESIGNATION

The planned centre in Precinct 3 (planned centre) is designated as a:

Planned centre	A local centre is planned in Precinct 3 of the adopted EWDSP
Major development	Any planned centre represents a major development for the purposes of triggering a Needs Assessment and Net Benefit Test

5.8.2 PROPOSED ACTIVITY

The planned centre is proposed to contain:

Retail floor space	5,000 sqm NLA
Non-Retail floorspace	2,950 sqm NLA
Total Activity Centre floor space	7,950 sqm NLA

BURGESS DESIGN GROUP | town planning + urban design

5.8.3 ACTIVITY CENTRE NETWORK AND TRADE AREA POPULATION

There are 12 existing and/or planned activity centres which are expected to influence or be influenced by the planned centre. The planned centre will:

- represent a 1.7% increase to the planned total retail floor space and 5.7% increase to the total convenience floor space available to the trade area.
- operate within a trade area (including existing and proposed resident areas) which is forecast to grow from 84,000 residents by 2031 to 148,000 by 2046.

5.8.4 RETAIL SPENDING

The current and forecast resident population in the trade area are estimated to generate:

- $728M p.a. in total retail spending by 2026 including $421M p.a. in convenience-based retail spending.
- $1.9B p.a. in total retail spending by 2046 including $1.1B p.a. in convenience-based retail spending.
- An additional $676M p.a. in convenience-based retail spending generated by residents in the trade area over the next 20 years.

5.8.5 NEEDS ASSESSMENT

The Needs Assessment confirms:

- That there is demand for an additional full line supermarket in the trade area by 2026.
- There is an ultimate demand for over 12 additional full line supermarkets in the trade area by 2046.

Analysis of retail sales potential shows that the planned centre:

- Has the potential to achieve retail market shares within the immediate communities which are consistent with industry expectations.
- Does not require an unrealistic over reliance on retail sales capture from any precincts outside its immediate influence.
- Has the potential to achieve retail sales performance consistent with industry averages for a neighbourhood centre by 2031.
- Has potential for significant retail sales growth over the subsequent 15 years - despite the planned introduction of significant convenience and comparison retail activity at Gnangara District Centre and Mariginiup NC.

5.8.6 IMPACT ASSESSMENT

Analysis of the Impact Assessment shows that the planned centre:

- Is not expected to have any economic impact on the surrounding activity centre network, nor the overall activity centre hierarchy.
- Can be developed sustainably while other existing and planned centres continue to experience significant retail sales growth.

5.8.7 NET BENEFIT TEST

Analysis of the Net Benefit Test shows that the planned centre:

- Will provide the existing residents in Hocking and Pearsall and the planned residents in precinct 3, 4 and 5 with access to a wider range of daily and weekly retail goods and services, without impacting the existing choices available to the residents.
- Has the potential to create up to 259 full time equivalent (FTE) jobs including 200 in the retail sector and 59 in the non-retail sector.

- Will generate a net increase in potential retail and non-retail employment opportunities given that the planned centre is not expected to result in lost retail sales (and employment) at other centres.
- Will provide retail and non-retail employment opportunities to those otherwise underrepresented in the workforce, including:
    - Female employees.
    - Employees looking for part time work.
    - Employees aged 15-19 years.
    - Residents who travel less than 2.5 km to work.
    - Residents who travel to work without a vehicle (car as passenger, bicycle or walking).

5.8.8 STRATEGIC ALIGNMENT

Based on the findings of the assessment, the planned centre is:

- Consistent with the strategic planning for the area.
- To be a size, scale, function, and role that is consistent with and complements the overall activity centre hierarchy as defined by SPP4.2.
- Will not have an impact on any of the activity centres in the network.
- Will not have the potential to result in the loss of or change the role and function of any activity centre in the network.
- Will not have the potential to have any impact or change to the activity centre hierarchy.
- Satisfies the criteria for assessing the benefits and impacts to the community and is therefore consistent with the objectives and outcomes of SPP4.2.

5.9 INFRASTRUCTURE COORDINATION AND SERVICING

An **Infrastructure Servicing Report** has been prepared by Cossill Webley to support the Precinct 3 – Elliot Road Local Structure Plan (refer **Appendix 10**). This report confirms the site is capable of being appropriately developed and provided with all essential services and infrastructure.

The Infrastructure Servicing Report provides details on each major infrastructure type and a servicing strategy for the development of the Precinct, covering:

- Siteworks
- Roadworks
- stormwater drainage
- sewerage
- water supply and utility services.

A summary of the report is provided below.

- The investigation has confirmed the land is capable of supporting development in accordance with the proposed Local Structure Plan, with a logical progressive extension of infrastructure and base capacity.
- The existing ground conditions and past land uses will not limit the proposed development.
- Road access to the development will be provided via existing roads which bound the Precinct.
- Sewerage will be provided for the majority of the Precinct by constructing a permanent wastewater pump station on Elliot Road, supplemented by two temporary pump stations at low points on the eastern boundary, as development progresses.
- There is adequate existing water infrastructure to service the Site.

BURGESS DESIGN GROUP | town planning + urban design

- Initial power supply can be provided by connection to the existing high voltage (HV) infrastructure in Elliot and Nicholas Roads. Western Power has advised that ultimately the East Wanneroo Precinct 3 residential development will require a new distribution feeder from the Wangara Substation, to provide the required capacity.

- Telecommunications and gas are available from existing services on Lenore Road.

- The investigations for and preparation of this report are largely based on preliminary advice from the various service authorities. The information is current as of March 2025, and is subject to change as development progresses.

5.9.1 SITEWORKS AND EARTHWORKS

Siteworks and Earthworks for the Site will need to accommodate the existing topography, areas of vegetation identified for conservation, and several existing homesteads.

The primary objective of the earthworks deign is to achieve positive outcomes, which include the following:

- Reduction in total home building cost.

- Rationalisation of retaining wall layouts, consistent with the City of Wanneroo specifications.

- Terrace lots up the natural slopes to maintain natural topography.

- Grading roads to follow the existing topography where possible, while catering for proposed gravity services and meet the standards of the required approval agencies.

- Accommodating drainage swales/basins in areas of local public open space.

- Matching existing levels of existing roads and homesteads, POS, and conservation bushland in the area.

The retention of Homestead Lots will influence the earthworks strategy, and accommodating their existing levels may not necessarily suit the most efficient subdivision earthworks design. This also applies to tying into existing ground levels along neighbouring boundaries of properties. Level differences will require walls, and approval from neighbouring landowners is required to build on the common boundary.

Siteworks and earthworks will generally consist of the following:

- Demolish buildings and hardstands.
- Remove trees including grubbing out roots and stumps.
- Strip the topsoil, all organic material, roots and other unsuitable or deleterious material from the Site. The history of market gardening within the Precinct may require a deeper than average top soil strip.
- Topsoil unsuitable for re-use may be retained for use on-site as non-structural fill (eg in planted areas outside building areas and sports ovals).
- Proof compact the exposed surface to achieve the level of compaction determined by a Geotechnical Engineer. If weak areas are identified during proof compaction, or the level of compaction is not achieved, further compaction or over-excavation and backfilling with compacted, approved fill of these zones will be required.
- Where fill is required to achieve the required levels, place and compact approved free draining granular fill.

5.9.2 STORMWATER DRAINAGE

Stormwater drainage management is a major component of an overall water strategy. Water Sensitive Urban Design (WSUD) techniques are incorporated during planning, design and construction of urban development projects to achieve the desired outcomes.

An Urban Water Management Plan will be required for the site, which will provide the following:

- Defines land area requirements for conveyance of flood flows and protection of future urban development from peak flood events.
- Proposes a drainage strategy appropriate for the local conditions, and outlines potential WSUD initiatives at the inter-allotment and POS scale. The location of areas within Public Open Space (POS) for the WWPS and drainage infrastructure will need to be considered in the subdivision design and POS calculations.
- Prescribes the design criteria for water quantity and quality for each sub-catchment.
- Outlines hydrologic and hydraulic framework parameters and develops the overall drainage network concept.
- Defines an implementation plan for the drainage design strategy.

The sandy soil on Site will allow for onsite storage and dissipation of stormwater. Recharge water quality will be improved through the adoption of 'Best Management Practices' which promote the disposal of runoff via water pollution control facilities (including vegetated swales and basins, detention storages and gross pollutant traps) and the implementation of non-structural source controls (including urban design, street sweeping, community education, low fertiliser landscaping regimes, etc).

Drainage from public roads and lanes would be collected via conventional pit and pipe systems. The drainage collection and conveyance system will be designed to cater for the runoff from storms with up to a 20% annual exceedance probability (AEP) event.

A series of detention basins would be designed to store runoff for the 20%, 10% and 1% AEP events. In all cases, roads and POS would be designed to cater for the surface overflow for more severe storms with building pad levels set at least 300 millimetres above the 1% AEP flood level in roadways and 500 millimetres above the 1% AEP flood level for storage detention basins.

The dispersion of stormwater disposal throughout the site (via soakwells, swales and basins) will maximise the area of recharge down through the soil profile to the shallow aquifer, thereby maximising the potential for nutrient stripping and water quality improvements. The basins will also assist nutrient removal in conjunction with other measures such as suitable vegetation planting and the use of modified soils with high phosphorous retention capacity.

Hyd2o Hydrology has been engaged as the consulting hydrologist to prepare a **Local Water Management Strategy**, which is attached at **Appendix 8**. This includes the identification of drainage catchments and the location of proposed basins within POS areas.

5.9.3 POWER

Western Power's Network Mapping Tool confirms there is currently limited spare electricity capacity in the East Wanneroo corridor, and a high voltage feeder to the Wangara substation to the west will ultimately be required to increase capacity to service the Site. Based on the proposed zoning and density of development within the LSP, the Site is expected to require approximately 7.9MVA.

There are existing high voltage overhead power lines in Elliot Road, Nicholas Road and Benmuni Road. The lines on Elliot Road and Nicholas Road have been undergrounded under Lenore Road on the western boundary. The remaining overhead lines on Elliot Road and Nicholas Road will require future undergrounding.

5.9.4 TELECOMMUNICATIONS

The Site is within NBN's fixed line footprint, and can be serviced with optic fibre via a headworks extension from their existing network.

BURGESS DESIGN GROUP | town planning + urban design

There are existing NBN pit and pipe services within Lenore Road, Nicholas Road, Elliot Road, and Benmuni Road that can serve as connections. Some lot connections will require removal by NBN to allow for subdivision.

The current design practice for road reserves, pavement and verge provisions will make adequate allowance for services including broadband in accordance with the agreed Utilities Service Providers handbook. There will be some local land requirements for telecommunications equipment sites which will be accommodated at detailed subdivision stage.

5.9.5 GAS

There are existing DN160, DN110 and DN63 high pressure steel gas mains located in various segments of Lenore Road adjacent to the Precinct. The DN160 stub at the intersection of Elliot Road and Lenore Road likely can be extended to service the development. Confirmation of gas capacity from ATCO will be required.

5.9.6 SEWER

The Water Corporation has provided advice regarding provision of Wastewater to the Site confirming a permanent wastewater pump station (WWPS) is required adjacent to Elliot Road at the low point, known as Jandabup Pump Station S. This pump station is part of the Jandabup Sewer District Plan. This permanent WWPS will service a significant portion of Precinct 3 and in the ultimate sense will likely discharge via a pressure main and gravity sewer to the south of Ocean Reef Road, once the area is more fully developed. The area that can be served by the Jandabup Pump Station S comprises approximately half of the LSP area in the north-west.

The Water Corporation has indicated that Jandabup WWPS S can discharge into the existing DN305 sewer near the intersection of Prindiville Drive and Hartman Drive south of the development, south of Ocean Reef Road. The alignment of the pressure main is yet to be determined, and will be progressed as development occurs. It is understood the permanent Jandabup WWPS S will be funded by the Water Corporation, although it is not currently on Water Corporation's Capital Investment Program.

The remainder of the site does not fall into the catchment for Jandabup WWPS S and in the ultimate sense is reliant on downstream gravity sewer being constructed by others. The timing of this downstream infrastructure is unknown, and likely to be after development of Precinct 3 has occurred. In this scenario two temporary WWPS will be required in order to serve the balance of the LSP area. The most efficient locations for the WWPS is in the north-east and south-east corners at natural low points as noted below. The discharge for these temporary WWPS is dependent on available sewer infrastructure at the time. The temporary WWPS and pressure mains are likely to be at the Developer's cost.

5.9.7 WATER

The Site has existing water infrastructure available for connection. There is a 610mm steel distribution pipe in the western verge of Lenore Road and a 300mm distribution main in Benmuni Road. In addition, there is a a 100mm main in Nicholas Road.

The Water Corporation has advised that the initial frontal stages of Precinct 3 can be serviced via an extension of reticulation mains from Lenore Road. However, future areas and some areas of elevated land will need to be serviced by extension off the high-level mains. The extent of these areas is not yet confirmed and The Water Corporation will confirm this at a later stage of the development process.

5.9.8 ROADS

Lenore Road forms the western boundary of the Precinct and has direct connection to the Regional Road, Ocean Reef Road (the future Ocean Reef Upper Swan Highway) to the south. Lenore Road has recently been upgraded to four lanes. It has been upgraded to an urban standard from the southern boundary of the Site to the Lenore Road/Elliot Road round-a-bout with kerbs, footpaths, drainage and line markings.

North of the round-a-bout, Lenore Road is constructed to a lower standard, with line markings, but without kerbs, footpaths or drainage.

It is expected that the existing roundabout at the Lenore Road/Elliot Road intersection will ultimately need to be upgraded to accommodate the wider road reserve on Elliot Road.

Benmuni Road on the eastern boundary is a paved two-lane bidirectional road constructed to a rural standard, and is currently classified as a 'Local Distributor'. Benmuni Road will need to be upgraded to a 'Neighbourhood Connector Type A' boulevard road, with a median strip, kerbs, footpaths, drainage and line markings. Round-a-bouts are expected to be required at the Benmuni Road, Ashley St and Nicholas Road intersections.

5.10 TRANSPORT NOISE ASSESSMENT

A **Transport Noise Assessment** reports is attached at **Appendix 11**.

The report confirms, with reference to the predicted noise levels, that it is evident the outdoor noise target will be exceeded on some lots with the LSP area.

Given the early stages of the Local Structure Plan, the noise mitigation is indicative only and would be further refined in detailed design. Outlined below are recommendations for road traffic noise to comply with SPP 5.4:

- Where lots are separated from Lenore Road by a local road and will face Lenore Road (e.g. lots north of the Neighbourhood Centre), Quiet House Packages as per the Policy Guidelines can be adopted. The reason this can be appropriate is the outdoor living areas (OLAs) to these dwellings will naturally be located on the side opposite the road corridor. Noise walls can also be considered in this scenario to reduce the Quiet House Package. For instance, where lots are within Exposure C, a noise wall may reduce this to Exposure B or A, depending on height.

- Where dwellings will be side on to the corridor and separated by a local road, Quiet House Packages will again be required. In this case, noise walls can also be provided to reduce the noise levels and also provide more freedom to the location of the OLA. Where noise walls are not provided as

BURGESS DESIGN GROUP | town planning + urban design

part of subdivision, either one would need to be provided by the lot owner on their lot boundary or their OLA is to be located on the east side of the dwelling, so that it is shielded from Lenore Road.

- Where dwellings immediately adjoin the corridor, a minimum 2.4-metre high noise wall is to be provided along with Quiet House Packages.

These elements will be considered as the design progresses and prior to subdivision design, along with noise monitoring to calibrate the noise model and predicting to possible double storey dwellings. However, the analysis shows that compliance can be achieved with SPP 5.4. A preliminary noise mitigation plan is provided at Figure 5-1 of **Appendix 11**.

5.11 STAGING

An **Indicative Early Staging Plan** is included at **Figure 9**. This plan shows the proposed initial development staging for the Local Structure Plan area.

Given Precinct 3 abuts established residential housing to the west, the available road connections through or abutting the Local Structure Plan area, such as Elliot Road, Lenore Road, Nicholas Road and Benmuni Road, facilitate an orderly and logical extension of existing development.

The first stage of development is anticipated to occur on Elliot Road centrally within the Precinct generally within the vicinity of the existing drainage area. This low point within the Precinct is the location of the first wastewater pumping station, it will contain future drainage and it includes a proposed recreation area. This location is also situated at the intersection of Elliot Road and the north-south Neighbourhood Connector road, providing ideal connectivity and access as future stages are developed.

It is anticipated that a total of more than 20 stages of development will be required to deliver the overall Local Structure Plan, spanning an estimated 7 to 10 years.

BURGESS DESIGN GROUP | town planning + urban design

The **Indicative Early Staging Plan** at **Figure 9** shows the intended location of the initial six stages of development based on servicing and landownership. Given the fragmented land ownership that characterises this area, the location of future stages will be considered as land assembly and development progresses

The timing of development will be guided by the planning approval processes, the ability to secure landholdings through ongoing acquisition and market conditions. It is anticipated development of the initial stages will commence as soon as possible following Local Structure Plan, subdivision and engineering approvals. Subsequent stages will then follow based on market demand.

Development will be progressed in a manner that minimises impacts on residents.

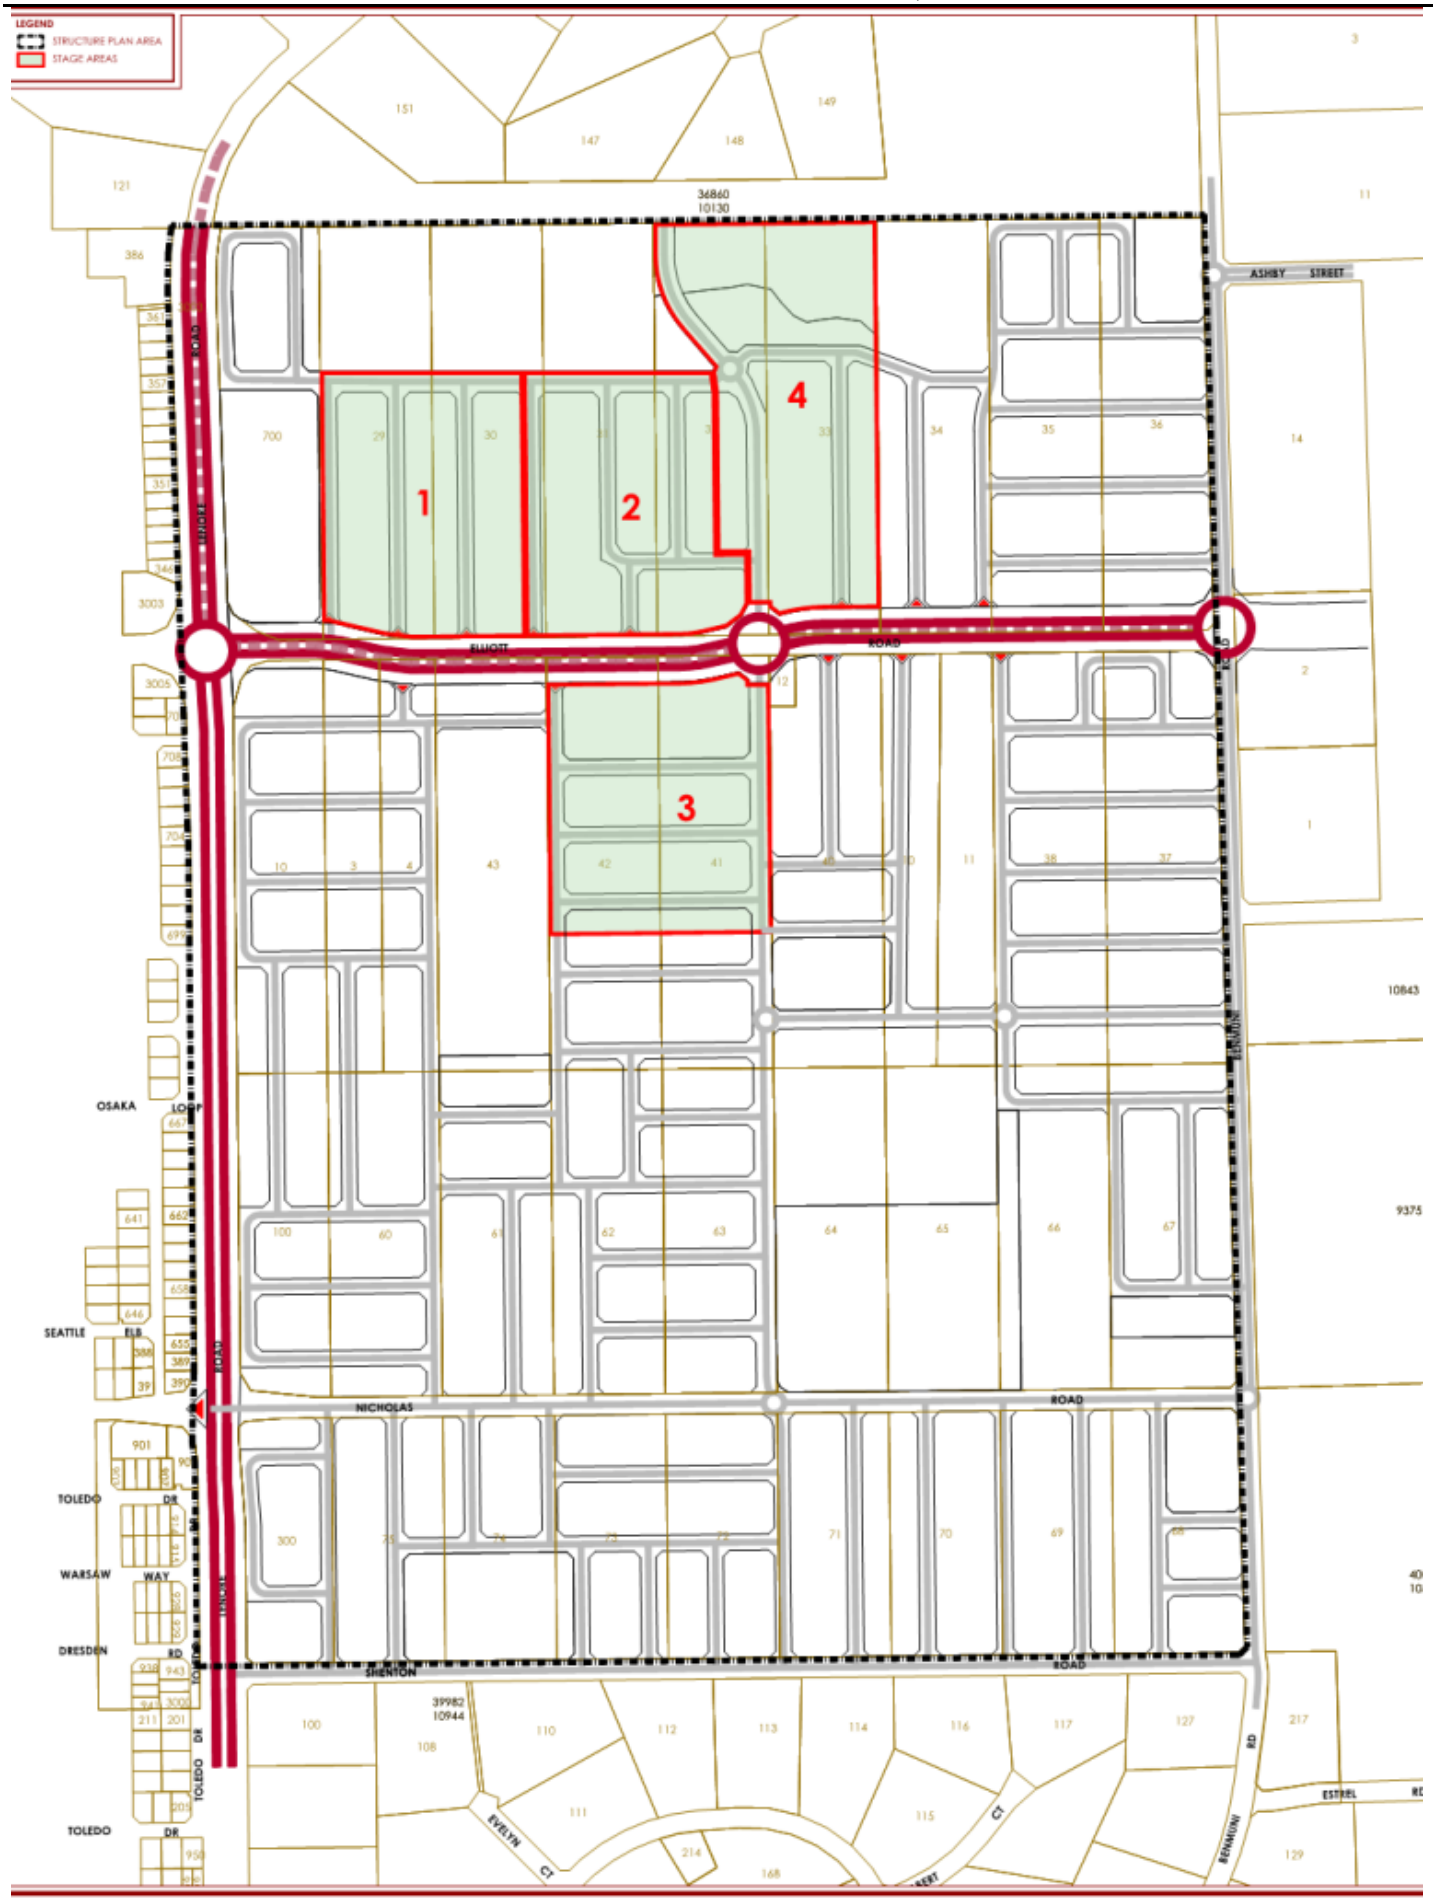

FIGURE 9. INDICATIVE EARLY STAGING PLAN
PRECINCT 3 - ELLIOT ROAD
EAST WANNEROO

5.12 DEVELOPER CONTRIBUTION ARRANGEMENTS

The City of Wanneroo and WAPC have commenced preparation of a District Developer Contribution Plan (DCP) for the East Wanneroo DSP Area, inclusive of Precinct 3.

The Draft District DCP was initially intended to be released for public comment in two parts, as follows:

- Part 1, being Amendment No. 214 to District Planning Scheme No. 2 and released for public comment on 20 March 2025 (closing 19 May 2025), relating to infrastructure and land acquisition for regional and district-level infrastructure items, excluding drainage and water management infrastructure requirements; and
- Part 2, to be released in mid-late 2025, relating to the district-level drainage and water management infrastructure requirements.

DPLH planning officers have recently advised that the drainage and water management infrastructure network may be designed and implemented by the Water Corporation as a 'groundwater management scheme' under a separate (non-DCP) mechanism. At the time of submitting this LSP, this was still unresolved.

With the proponent having assembled significant holdings within Precinct 3, the need for a Local DCP has not yet been determined. Discussions with approval agencies on this element of infrastructure provision will occur during the assessment process.

BURGESS DESIGN GROUP | town planning + urban design

5.13 OTHER REQUIREMENTS

TABLE 10: OTHER REQUIREMENTS				
APPENDIX NO.	DOCUMENT TITLE	APPROVAL REQUIRED	APPROVAL AGENCY	APPROVAL STATUS

6. CONCLUSION

This Local Structure Plan for Precinct 3 – Elliot Road has been prepared in accordance with the planning framework adopted by the City of Wanneroo and the Western Australian Planning Commission for the East Wanneroo growth corridor and reflects the advice received during consultation with various approval agencies.

The Local Structure Plan provides for development of an appropriate urban form in accordance with the outcomes of a comprehensive technical analysis comprising:

- Town planning & urban design
- Civil engineering design and infrastructure servicing
- Transport impact assessment
- Environmental assessment and management
- Local water management strategy
- Bushfire management plan
- Transport noise assessment
- Landscape Masterplan
- Retail Needs Assessment and Net Benefit Test

This Local Structure Plan is thus considered to provide a robust and well considered framework to guide the ongoing development of Precinct 3 – Elliot Road.

The Local Structure Plan has been prepared in accordance with the WA Planning Manual *Guidance for Structure Plans* (August 2023), City of Wanneroo Local Planning Policy 5.3 (LPP 5.3) and generally follows the guidance provided by the East Wanneroo District Structure Plan.

The Local Structure Plan is a key component of the East Wanneroo growth corridor, providing essential major infrastructure (such as the Waste Water Pumping Station) to support development both within and adjacent to Precinct 3. It also represents a logical extension of the existing urban development west of Lenore Road and is located approximately 2 kilometres south of the Wanneroo Town Centre.

BURGESS DESIGN GROUP | town planning + urban design

The Local Structure Plan has been prepared in close consultation with the Department of Planning, Lands and Heritage, City of Wanneroo, Department of Education, Water Corporation and other key approval agencies.

Proposals have also been informed from meetings with long term local residents who have provided their local area knowledge and context, telling stories of historical use and enjoyment of the land and the Wanneroo area generally.

The proposals contained herein have been carefully considered to reflect existing sense of place, respect heritage, and embrace environmental assets to create a residential community with high amenity.

The Local Structure Plan has been carefully designed to generally reflect the guidance of the East Wanneroo District Structure Plan, including protecting those areas shown as 'Bushforever' under the Metropolitan Region Scheme, including a Primary School and Neighbourhood Centre and providing for the upgrading of Elliot Road into an Integrator Arterial Road/Rapid Transit Route. The Local Structure Plan also incorporates the Neighbourhood Playing Fields required under the City of Wanneroo Community Facilities Plan.

Development is proposed with regularly shaped north-south and east-west street blocks to maximise solar efficiency, with the layout respecting existing property and ownership boundaries where possible.

Varying residential densities have been shown in accordance with the intent of the DSP (particularly within proximity to the future District Centre in Precinct 12) and performance criteria included to encourage varying housing typologies.

Public open space has been provided to meet local needs and to also protect local environmental features (primary bushland). The Local Structure Plan also interfaces appropriately with Shenton Road at its southern boundary.

Importantly, approval of the Local Structure Plan for Precinct 3 presents an opportunity for the expedited progression of residential development within the East Wanneroo urban corridor due to several favourable factors:

BURGESS DESIGN GROUP | town planning + urban design

Strategic Alignment

The whole of Precinct 3 is identified within the East Wanneroo District Structure Plan (DSP) as a short-term 'Stage 1 2021 - 2031' development area, supporting early activation and streamlined approval pathways. This is particularly important given potential delays to Stage 2 areas due to ongoing refinement of the groundwater management scheme.

Servicing Readiness

The precinct benefits from its proximity to existing infrastructure, allowing for the straightforward extension of services and reducing lead times for delivery.

Affordable Housing Outcomes

The Local Structure Plan facilitates the timely provision of affordable and accessible residential lots, aligning with broader government and community housing objectives.

Non-Contingent Delivery

Unlike other Precincts within the East Wanneroo District Structure Plan area, Precinct 3 is not reliant on unresolved matters, such as the groundwater management scheme, enabling its progression as a stand-alone development opportunity.

These factors collectively support a prioritised assessment and approval process for the LSP.

Approval of this carefully resolved Local Structure Plan in one of East Wanneroo's least complex Stage 1 precincts is now sought.

Executive Summary

The East Wanneroo District Structure Plan (DSP) was prepared by the Western Australian Planning Commission (WAPC) to guide the progressive urbanisation of East Wanneroo, with the DSP extending over approximately 8,300 ha, and divided into 28 precincts (Appendix 1).

Satterley Property Group (Satterley) is progressing structure planning within Precinct 3 (the site), which is located in the southwestern portion of the DSP area and extends over approximately 135 ha (Figure 1). This precinct is proposed to be developed as a suburban neighbourhood and is identified to form part of the DSP Stage 1 development area.

The landholdings within Precinct 3 are currently zoned Urban Deferred and Rural under the Metropolitan Region Scheme (MRS) and Rural under the City of Wanneroo District Planning Scheme No 2 (DPLH, 2025a).

A Local Structure Plan (LSP) has been prepared by Burgess Design Group which presents the development layout for the landholdings within Precinct 3 and addresses the requirements of the East Wanneroo DSP (Appendix 2).

Environmental factors which have been identified to be relevant to the environmental impact assessment of the LSP include:

- Terrestrial Environmental Quality
- Inland Waters
- Flora and Vegetation
- Terrestrial Fauna
- Social Surroundings.

Other environmental matters relevant to the proposal include:

- Bushfire.

Key Environmental Values of the Site

Desktop review and site surveys have identified that the site has the following key environmental values:

Terrestrial Environmental Quality

- Topography at the site ranges between 52 metres Australian Height Datum (m AHD) in the northeastern corner to 84 mAHD to the southwestern corner of the site.
- Soils within the site are mapped as comprising Sand derived from Tamala Limestone (Unit: S7).
- Soils at the site are predominantly identified as posing no known Acid Sulfate Soils (ASS) risk. A small area within the north eastern corner of the site is mapped as overlapping a moderate to high ASS risk area.
- The site is mapped by the City of Wanneroo as having a Low cave risk.
- No known contaminated sites are located within the site or in the surrounding area.
- Precinct 3 is a rural area which is used for purposes including rural lifestyle living, market gardening, equestrian activities, etc. There is potential that soil and/or groundwater quality could be impacted by current and historical land uses.
- Development of the site can be managed to ensure potential contamination is appropriately assessed and remediated, if required, prior to development. Potential dust generation can be managed through the preparation and implementation of Construction Environmental Management Plan or similar, which will include best practice construction techniques and management practices.

Inland Waters

- Regional mapping by the Department of Water and Environmental Regulation (DWER) indicates that the maximum groundwater level in this location is ranges from approximately 40 to 42 mAHD, with superficial aquifer groundwater flow direction being westerly towards the coast (DWER, 2024a).
- Based on topographic elevations this indicates that depth to groundwater varies from approximately 10m below ground level (BGL) to 44 mBGL (DWER, 2024a).
- There are no Public Drinking Water Source Areas (PDWSAs) located within the site.
- There are no surface water features present within the site.
- There are no geomorphic wetlands mapped within the site, with the closest wetland being located approximately 280 m east of the site.
- In comparison to the current rural land uses, implementation of the LSP to facilitate future urban development will result in the following predicted outcomes for inland waters:
    - The existing conductions which are conducive the infiltration through the sandy subsurface profile, together with a large separation distance to groundwater will remain
    - Reduction in nutrient inputs and groundwater abstraction across the site
    - Avoidance of impacts to groundwater quality
    - Stormwater can be managed and infiltrated onsite and can operate independently of other surrounding East Wanneroo development precincts.

Flora and Vegetation

- The site is located within the mapped extent of vegetation association's Spearwood 6 and Bassendean 949, and Karrakatta Complex- Central and South. The site contains approximately 32.9 ha of native vegetation.
- The detailed flora and vegetation survey undertaken in spring 2024 by Ecoscape (2025) for the site identified two vegetation types:
    - BaLOF: *Banksia attenuata*, *Allocasuarina fraseriana* and *Banksia menziesii* low open forest, occupying 14.8%
    - EmmLW: *Eucalyptus marginata* subsp. *marginata*, *Banksia prionotes* and *Allocasuarina fraseriana* low woodland, occupying 9.6%
- The condition of the vegetation ranged from Completely Degraded to Very Good condition, with the majority of native vegetation in Good or Very Good condition.
- No threatened flora species listed under the *Biodiversity Conservation Act 2016* (BC Act) and/or under the *Environmental Protection and Biodiversity Conservation Act 1999* (EPBC Act) were recorded during the field survey.
- One Priority 2 flora, *Poranthera moorokatta*, was recorded during the field survey.
- The floristic community type (FCT) analysis indicated that both vegetation types are most likely FCT 28 - Spearwood *Banksia attenuata* or *B. attenuata*-Eucalyptus woodlands.
- One federally listed Threatened Ecological Community (TEC), the Banksia Woodlands of the Swan Coastal Plain ecological community (Banksia WL SCP ecological community) was mapped within site, totalling 17.9 ha (13.3%).
- The LSP proposes to retain 13.0 ha (39.5%) of native vegetation within Parks and Recreation reserve, which comprises 5.8 ha of the EmmLW vegetation unit and 7.2 ha of the BaLOF vegetation unit. The

portion of this vegetation which is representative of the Banksia WL SCP ecological community is 9.4 ha (52.2%).

- Areas of retained vegetation in identified Parks and Recreation reserve will be subject to vegetation management, including weed control and targeted revegetation. The details of these works will be outlined within a Conservation Area Management Plan, or similar, proposed to be prepared at subdivision stage
- Based on the extent of clearing of Banksia WL SCP vegetation onsite, development proposals would be referred to the Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW) under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act). The EPBC Act referral review and assessment process will allow for further assessment of impacts to Banksia WL SCP vegetation and for environmental offsets to be provide, where required.

Fauna and Habitat

- The fauna survey undertaken in February 2025 by Ecoscape (2025) recorded the following conservation listed species:
    - Carnaby's Cockatoo (*Zanda latirostris;* Endangered under the BC Act and EPBC Act)
    - Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso;* Vulnerable under the BC Act and EPBC Act)
    - Quenda (*Isoodon fusciventer;* Priority 4 as listed by the DBCA).
- One fauna habitat occurs within the survey area, described as Banksia Woodland (occupying 24.4% or 32.9 ha) with the remainder not native vegetation or cleared for rural/rural residential land uses.
- The Banksia Woodland habitat type is high-quality foraging habitat for Carnaby's Cockatoos and moderate quality foraging habitat for Forest Red-tailed Black Cockatoos, according to the Bamford scale, and high quality habitat for both species according to the Commonwealth Black Cockatoo referral guidelines habitat scoring tool.
- 95 Black Cockatoo habitat trees were recorded to have suitable diameters (>500 mm), of which 84 were Jarah (*Eucalyptus marginata*), 5 were Tuart (*Eucalyptus gomphocephala*), 7 were dead and 2 were other.
- No trees were identified within the site as having hollows with active nests or showing previous use as a Black Cockatoo nest.
- One Jarrah was recorded within the eastern extent of Lot 40 as having potentially suitable hollows without evidence of use.
- 30 trees were classified as trees with large hollows that weren't suitable for Black Cockatoos and 64 as trees currently without large hollows.
- No known roost locations are registered within the site, with the closest recorded roost being approximately 530 m east of the site.
- The LSP proposed to retain approximately 13.0 ha (39.5%) of Black Cockatoo habitat within Parks and Recreation, which comprise of:
    - high value Carnaby's Cockatoo foraging habitat
    - moderate value Forest Red-tailed Black Cockatoo foraging habitat
    - 38 Black Cockatoo habitat trees with suitable diameter.
- Areas of retained fauna and Black Cockatoo habitat in identified Parks and Recreation reserve, will be subject to vegetation management including weed control and targeted revegetation. The details of these works will be outlined within a Conservation Area Management Plan, or similar, proposed to be prepared at subdivision stage.

- A Vegetation and Fauna Management Plan will be prepared and implemented at subdivision stage to prevent damage to fauna habitats being retained, and ensure fauna is appropriately trapped and relocate. It will also include protocols for dealing with displaced/injured animals during clearing and subdivisional works.
- Future development proposals proposing to clear Black Cockatoo habitat will require referral under the Commonwealth EBPC Act. The EPBC Act referral and assessment process will require further evaluation of impacts to Black Cockatoo and for environmental offsets to be provided, where required.

Social Surroundings

- There are no known registered Aboriginal cultural heritage sites or other heritage places within or in proximity to the site.
- There are no known European heritage sites within the site.
- The Department of Mines, Industry, Regulation and Safety (DMIRS) GeoView database does not indicate the presence of any SPP 2.4 Basic Raw Materials extraction sites or exclusions areas within the landholdings.
- The site is not mapped within any strategic freight and/or major traffic routes as identified by State Planning Policy 5.4 Road and Rail Noise.
- Market gardening and other intensive primary industry activities exist with the site and surrounding areas. The interface between these land uses and future development need to take into consideration how these land uses are separated.
- Preparation and implementation of a Construction Environmental Management Plan or similar for future subdivisional works, which will include key obligations under the *Aboriginal Heritage Act 1972* (AH Act) regarding potential finds of cultural significance, and dust management requirements to prevent loss of surface soils and soil stabilisation requirements.

Local Structure Plan

A Local Structure Plan has been prepared for Precinct 3 (Appendix 1). The Local Structure Plan will inform future subdivision plans through detailed engineering and planning design phases, as the environmental and planning approvals processes progress. Key features of the Local Structure Plan include:

- Retention of 13.0 ha of vegetation within Parks and Recreation reserves
- Development of 19.9 ha of land within Urban Development and Public Open Space areas
- Retention of Banksia Woodlands TEC
- Retention of Black Cockatoo foraging habitat and habitat trees.

Future Actions

To ensure the detailed project design and implementation achieves appropriate environmental outcomes, the following reports and management plans will be prepared at future subdivision and/or development stages:

- Urban Water Management Plan(s)
- Bushfire Management Plan(s)
- Conservation Area Management Plan(s)
- Vegetation and Fauna Management Plan(s)
- Construction Environmental Management Plan
- ASS Assessment and Dewatering Management Plan, if required

1 Introduction

1.1 Background

The East Wanneroo District Structure Plan (DSP) was prepared by the Western Australian Planning Commission (WAPC) to guide the progressive urbanisation of East Wanneroo, with the DSP extending over approximately 8,300 ha, and divided into 28 precincts (Appendix 1).

Satterley Property Group (Satterley) is progressing structure planning within Precinct 3 (the site), which is located in the southwestern portion of the DSP area and extends over approximately 135 ha (Figure 1). Details regarding the landholdings within this precinct are provided in Table 1-1. This precinct is proposed to be developed as a suburban neighbourhood and is identified to form part of the DSP Stage 1 development area.

The landholdings within Precinct 3 are currently zoned Urban Deferred and Rural under the Metropolitan Region Scheme (MRS) and Rural under the City of Wanneroo District Planning Scheme No 2 (DPLH, 2025a).

A Local Structure Plan (LSP) has been prepared by Burgess Design Group which presents the development layout for the landholdings within Precinct 3 and addresses the requirements of the East Wanneroo DSP (Appendix 2).

Table 1-1: Lot identification details

Lot Details	Certificate of Title	Address	Area (ha) [approximate]
Lot 700 Elliott Road	2779/365	171 Elliott Road, Wanneroo	3.828
Lot 29 Elliott Road	1174/500	179 Elliott Road, Wanneroo	4.371
Lot 30 Elliott Road	36/98A	191 Elliott Road, Wanneroo	4.371
Lot 31 Elliott Road	36/99A, 1652/776	207 Elliott Road, Wanneroo	4.371
Lot 32 Elliott Road	1164/832	215 Elliott Road, Wanneroo	4.371
Lot 33 Elliott Road	1168/406	223 Elliott Road, Wanneroo	4.371
Lot 34 Elliott Road	1464/818	239 Elliott Road, Wanneroo	4.371
Lot 35 Elliott Road	1274/190	249 Elliott Road, Wanneroo	4.371
Lot 36 Elliott Road	1274/191	259 Elliott Road, Wanneroo	4.171
Lot 37 Benmuni Road	1158/744	98 Benmuni Road, Wanneroo	4.504
Lot 38 Elliott Road	1934/287	248 Elliott Road, Wanneroo	4.371
Lot 11 Elliott Road	1438/245	238 Elliott Road, Wanneroo	2.185
Lot 10 Elliott Road	1438/244	232 Elliott Road, Wanneroo	2.185
Lot 40 Elliott Road	1335/979	232 Elliott Road, Wanneroo	4.246
Lot 12 Elliott Road	2619/498	224 Elliott Road, Wanneroo	0.125
Lot 41 Elliott Road	2/41A	220 Elliott Road, Wanneroo	4.371
Lot 42 Elliott Road	1277/946	220 Elliott Road, Wanneroo	4.371

1.2 Purpose and scope of this report

This Environmental Assessment Report (EAR) was prepared to accompany the LSP documentation package and address:

- the environmental values of the site
- potential environmental impacts associated with the proposed development
- the design, management and mitigation strategies proposed to address these impacts.

2 Planning and Environmental Assessment Context

2.1 East Wanneroo District Structure Plan

In response to the *North-West Sub-Regional Planning Framework 2018*, the East Wanneroo DSP was developed to guide the progressive urbanisation of the East Wanneroo area (WAPC 2021). The DSP was finalised in July 2021 and approved by the Minister for Planning in August 2021.

The DSP area includes a mix of mainly rural land uses such as market gardens, equestrian activities and rural lifestyle properties surrounding regional parks, state forests and wetlands, many of which have significant environmental values (WAPC, 2021a). Balanced with the elements required to create functional and attractive neighbourhoods that are serviced by high schools, activity centres and future employment opportunities, the DSP seeks to protect the natural, historical and cultural values within the East Wanneroo area (WAPC, 2021a).

The DSP identifies that Precinct 3 is to contain the following land uses:

- Suburban neighbourhood
- Parklands
- Parklands (subject to confirmation)
- Parkland link
- Centre
- Transport corridor
- Service corridor

With regard to the areas designated as Parklands within the DSP, these include the following (WAPC, 2021a):

- Parks and Recreation reserves under the MRS
- Local reserves vested within the City of Wanneroo
- Conservation Category Wetlands.

In addition to the existing reserves listed above, the DSP proposes the creation of new Parks and Recreation reserves from the following two categories (WAPC, 2021a):

1. **New Parks and Recreation reserves**: As the responsible authority the WAPC will prepare and initiate the MRS amendments to create these new reserves
2. **Potential Parks and Recreation reserves subject to confirmation**: Proponents undertaking LSPs for any precincts containing these potential reserves will be responsible for carrying out detailed flora and fauna surveys to confirm the appropriate configuration of these new reserves.

The DSP has identified both of the above categories within Precinct 3, as well as one portion of Bush Forever Site 327 (Lot 66 and Part Lot 67 Nicholas Road) which has been identified as suitable for a negotiated planning outcome in accordance with WAPCs (2008) State Planning Policy (SPP) 2.8 – Bushland Policy for the Perth Metropolitan Region.

2.2 Zonings and Reserves

2.2.1 Metropolitan Region Scheme

As a first step towards the urbanisation of East Wanneroo, the WAPC initiated MRS amendment 1308/41 to rezone 2,099.80 ha in the East Wanneroo DSP area from Rural to Urban Deferred. As part of this MRS

amendment, the majority of Precinct 3 was zoned Urban Deferred under the Metropolitan Region Scheme (MRS) with some vegetated areas remaining within the Rural zone. The areas zoned Rural align with areas designated as Parklands and Parklands (subject to confirmation) under the DSP.

The WAPC will consider lifting of urban deferment for Precinct 3 in line with their Lifting of Urban Deferment Guidelines and the DSP which requires preparation of a LSP, confirmation that water and wastewater services can be provided and any other requirements specific to Precinct 3 (as set out in the DSP).

2.2.2 City of Wanneroo District Planning Scheme No. 2

Under the City of Wanneroo District Planning Scheme No. 2 (DPS 2) the site is zoned Rural, and it is expected that a concurrent amendment to rezone Precinct 3 under the City's DPS 2 will take place.

2.3 Land Use Planning Process

The following sets out the land use planning process that will be applied to facilitate future urban development:

- Submit request to lift urban deferment and rezone the site to Urban
- Reserve Part Lots 29, 30, 31, 32, 33, 34, 43, 66 and 67 to Parks and Recreation under the MRS to ensure the most significant environmental values of the site are conserved and retained for the long term.
- Concurrent LPS amendment to rezone the land from Rural to Residential Development under DPS 2.
- LSP to be prepared and approved for Precinct 3 for the urban area.
- Subdivision and development, including addressing any relevant subdivision conditions (e.g. preparation of management plans as conditions of subdivision).

2.4 Precinct 3 Local Structure Plan

The proposed LSP has been developed for Precinct 3 and comprises the following attributes:

- Suburban neighbourhood residential
- Public Open Space
- Parklands Reserve
- Childcare centre
- Primary School
- Group Dwelling.

2.5 Environmental Assessment

2.5.1 State legislation

The *Planning and Development Act 2005* (PD Act) requires all proposed schemes and scheme amendments to be referred to the Environmental Protection Authority (EPA) by the Responsible Authority (in this instance the WAPC) for the scheme. Following referral of a scheme amendment, and in accordance with Section 48A of the *Environmental Protection Act 1986* (EP Act), the EPA will determine whether the referred scheme amendment:

- should not be assessed (with advice and recommendations potentially provided)
- should be assessed (i.e. environmental review of the scheme with instructions issued by the EPA concerning the scope and content of the environmental review)
- is by its nature incapable of being made environmentally acceptable.

MRS amendment 1308/41 was referred to the EPA for its consideration and in February 2016, the EPA determined that the scheme amendment should not be assessed under Part IV of the EP Act.

2.5.2 Federal legislation

Any proposed action which is likely to result in significant impacts to Matters of National Environmental Significance (MNES) listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is required to be referred to the Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW) to determine whether it requires assessment under the EPBC Act.

The timing of EPBC Act referrals is not directly linked to the state planning processes. In an urban development context, EPBC Act referrals are typically undertaken once detailed design been undertaken and the development layout has been determined (for example, at the LSP stage).

2.6 Associated Technical Reports

The following technical reports have been prepared to support the LSP. Key information from these documents is referenced in this EAR where relevant:

- Local Water Management Strategy (Hyd2o, 2025)
- Bushfire Management Plan (Emerge Associates, 2025)

3 Terrestrial Environmental Quality

3.1 Key Policies and Guidance

Relevant policy and guidance documents for terrestrial environmental quality, which have been used to assess potential impacts, include:

- Environmental Factor Guideline – Terrestrial Environmental Quality (EPA, 2016e)
- Acid Sulphate Soils Planning Guidelines (WAPC, 2008)
- Managing Urban Development in Acid Sulfate Soil Areas (DER, 2015a)
- Identification and Investigation of Acid Sulfate Soils and Acidic Landscapes (DER, 2015b)
- Treatment and Management of Soil and Water in Acid Sulfate Soil Landscapes (DER, 2015c)
- Identification, Reporting and Classification of Contaminated Sites in Western Australia (DWER, 2025)
- Assessment and Management of Contaminated Sites (DWER, 2021).

3.2 Receiving Environment

3.2.1 Topography

Topography at the site ranges between 52 metres Australian Height Datum (mAHD) in the northeastern corner to 84 mAHD to the southwestern corner of the site (Landgate, 2024b) (Figure 3).

3.2.2 Geology and Soils

Soils within the site are mapped as comprising Sand derived from Tamala Limestone (Unit: S7), which is described as 'Sand - pale and olive yellow, medium to coarse-grained, sub-angular quartz with a trace of feldspar, moderately sorted, of residual origin' (Gozzard, 1982) (Figure 3). A small portion of the site (<0.1% of the site area) is mapped as Peaty Clay (Unit: Cps) which is described as 'dark grey and black soft variable organic content some quartz sand in places of lacustrine origin' (Gozzard, 1982).

The Department of Primary Industries and Regional Development (DPIRD) soil landscape mapping identifies that the site comprises the Karrakatta Sand Yellow Phase (DPIRD, 2024; Landgate, 2024a). This system is described in Table 3-1. Table 3-2 lists the land degradation risk categories for this land system mapping unit.

Table 3-1: Land Systems

Mapping Units	Land System	Description
211Sp__Ky	Karrakatta Sand Yellow phase	Low hilly to gently undulating terrain. Yellow sand over limestone at 1-2 m. Banksia spp. woodland with scattered emergent *Eucalyptus gomphocephala* and *Eucalyptus marginata* and a dense shrub layer

Source: DPIRD, 2024; Landgate, 2024

Table 3-2: Land degradation risk categories

Land Degradation Risk Category	211Sp__Ky
Water Erosion	<3% of map unit has a very high to extreme hazard
Wind Erosion	>70% of map unit has a high to extreme hazard
Flood Hazard	<3% of the map unit has a moderate to high hazard
Salinity Risk	<3% of map unit has a moderate hazard
Waterlogging and Inundation	<3% of map unit has a moderate to very high risk

Source: DPIRD, 2024

Soils at the site are predominantly identified as posing no known Acid Sulfate Soils (ASS) risk. A small area within the north eastern corner if the site (Unit Cps) is mapped as overlapping a moderate to high ASS risk area (Landgate, 2024b) (Figure 3).

The site is mapped by the City of Wanneroo as having a Low cave risk (CoW, 2025).

3.2.3 Land Use

Precinct 3 is a rural area which is used for purposes including rural lifestyle living, market gardening, equestrian activities, place of worship, as well as containing areas of native vegetation (Figure 2). The site is not connected to the Water Corporation sewer network and instead, the existing premises are serviced by septic tanks or Alternative Treatment Units.

Surrounding land uses include:

- Hocking residential area to the west
- Benmuni Park Parks and Recreation reserve to the immediate north
- Rural residential landholdings to the north (beyond the Parks and Recreation reserve) and to the south
- Rural landholdings to the north east
- Nanovich Park Parks and Recreation reserve to the south east.

Review of historical aerial photography (Landgate, 2025b) indicates the following general historical land uses across the site:

- Subdivision of individual lots and clearing of portions of the site commenced prior to 1965. Market gardening and orchard establishment has also commenced on a number of lots.
- Further vegetation clearing and development of the site for predominantly agricultural purposes (including market gardening and potentially poultry farming) continued between 1965 and 2000s, with these land uses continuing to present time on many of the lots.
- The St Mark and St George Coptic Orthodox Church was constructed on Lot 11 Elliot Road in the mid-2000s.

3.2.4 Potential Contamination

A search of the Department of Water and Environmental Regulation (DWER) contaminated sites database did not identify the presence of known contaminated sites within or immediately surrounding Precinct 3 (DWER, 2024b).

The DWER guidance for assessment and management of contaminated sites (DWER, 2021) identifies the land uses which have the potential to result in contamination of the soil or underlying groundwater. Examples of land uses which may be relevant to the site include:

- Asbestos products, manufacture, use or disposal
- Fertiliser manufacture or storage
- Intensive agriculture
- Market gardens, orchards, poly tunnels, plant nurseries and viticulture.

Based on the above, there is potential that soil and/or groundwater quality could be impacted by current and historical land uses.

3.3 Potential Impact Identification and Assessment

3.3.1 Potential Contamination

It is possible that soil or groundwater contamination may have been impacted by current or historical land uses undertaken onsite.

Initial investigations relating to potential contamination have commenced on a number of lots across the site with preliminary findings indicating common rural lot conditions are present including evidence of surface rubbish in some locations, localised surface potential Asbestos Containing Material (ACM) presence in some locations and minor concentrations of pesticides being detected in some soils.

Further investigations are proposed in accordance with the DWER Contaminated Sites Guideline for 'Assessment and management of contaminated sites' (DWER, 2021) at the subdivision stage of the project.

Future site contractors will also be provided with an unexpected finds procedure which will guide notification and management requirements should any areas or sources of potential contamination be identified during the site works program that have not been previously uncovered.

3.3.2 Acid Sulfate Soils

As noted above, the site is not mapped as posing an ASS risk. There is a small area of moderate to high risk ASS mapped generally north of the site, with a small intrusion into Lots 35 and 36 Elliot Road. Table 3-3 outlines the ASS investigation trigger criteria as provided by DWER (DER, 2015b).

Table 3-3: ASS Investigation Trigger Criteria Assessment

Criteria	Comment
Acid sulfate soil disturbing subdivision or development that is subject to conditional approval requiring the investigation and management of acid sulfate soils	No subdivision or development approvals have been granted for Precinct 3 at this time.
Soil or sediment disturbance of 100 m3 or more in an area depicted on an ASS risk map as Class I 'high to moderate risk of ASS occurring within 3 m of natural soil surface' (e.g., construction of roads, foundations, installation of underground infrastructure, drainage works, land forming works, dams and aquaculture ponds or sand or gravel extraction)	Unlikely to occur. To be confirmed once engineering designs for this portion of the site are available.
Soil or sediment disturbance of 100 m3 or more with excavation from below the natural water table in an area depicted on an ASS risk map as Class II 'moderate to low risk of ASS occurring within 3m of natural soil surface but high to moderate risk of ASS beyond 3 m of natural soil surface'	Not Class II areas are present onsite.
Lowering of the water table, whether temporary or permanent (e.g., for groundwater abstraction, dewatering, installation of new drainage, modification to existing drainage), in areas depicted in an ASS risk map as Class I 'high to moderate risk of AASS or PASS occurrence' or Class II 'moderate to low risk of AASS or PASS occurrence within 3m of natural soil surface'	Unlikely to occur given separation distance to groundwater in the Class I area is approximately 9m below ground level.
Any dredging operations	No dredging is proposed.
Extractive industry works (e.g., mineral sand mining) in any of the areas listed in Table 1*	No extractive industries works are proposed.
Flood mitigation works, including construction of levees and flood gates, in any of the areas listed in Table 1*	No flood mitigation works are required.

*Source: DER (2015b); *refer to Table 1 in DER (2015b)*

Based on the above, it is unlikely that assessment of ASS will be required for the site.

3.4 Impact Mitigation

The proposed development will manage impacts to terrestrial environmental quality in accordance with the mitigation hierarchy (Table 3-4).

Table 3-4: Terrestrial Environmental Quality Mitigation Hierarchy

Mitigation Hierarchy	Assessment and Proposed Actions
Impact	
Terrestrial Environmental Quality	• Intercepting areas of potential contamination • Potential disturbance to ASS • Potential loss of surface soil through wind erosion
Mitigation Hierarchy	
Avoidance	• Areas of high to moderate risk ASS are limited in size and are not likely to require dewatering or disturbance of >100m^3 of soil.
Minimisation	• Preliminary Site Investigation (PSI) for potential contamination is to be undertaken in accordance with DWER guidance for the site prior to subdivision works commencing. Depending on the results of this investigation and Detailed Site Investigation and remediation works may be undertaken, if required. • An ASS assessment will be undertaken prior to subdivision works commencing if the following is to occur within the mapped Class I area on site: ▪ Soil or sediment disturbance of 100m^3 or more ▪ Lowering of the water table, whether temporary or permanent. • An unexpected finds procedure will be provided to site contractors in the case of potential contamination being identified. • A Construction Environmental Management Plan will be prepared for the site. This will contain, amongst other items, unexpected finds protocol for potential contaminants, dust management requirements to prevent loss of surface soils and soil stabilisation requirements.

3.5 Predicted Outcome

Development of the site can be managed to ensure potential contamination is appropriately assessed and remediated, if required, prior to development. Potential dust generation can be managed through the preparation and implementation of Construction Environmental Management Plan, which will include standard construction techniques and management practices.

The risk of ASS presence/disturbance has been identified to be low.

4 Inland Waters

4.1 Key Policies and Guidance

Relevant policy and guidance documents for inland waters, which have informed site-specific investigations and/or have been used to assess potential impacts, include:

- Environmental Factor Guideline – Inland Waters (EPA, 2018)
- State Planning Policy 2.9 Water Resources (WAPC, 2006) and Draft State Planning Policy 2.9 Planning for Water (DPLH, 2021)
- Better Urban Water Management (WAPC, 2008a)
- Stormwater Management Manual for Western Australia (DWER, 2004)
- Interim: Developing a local water management strategy (DoW, 2008)
- City of Wanneroo local planning policies including:
  - Local Planning Policy 4.4 - Urban Water Management
  - Local Planning Policy 5.3 - East Wanneroo

4.2 Receiving Environment

4.2.1 Groundwater

The site is underlain by the Superficial Swan Aquifer, the confined Leederville aquifer and the confined Yarragadee North aquifer (DWER, 2024b).

Regional mapping by the DWER indicates that the maximum groundwater level in this location ranges from approximately 40 to 42 mAHD (Figure 4), with superficial aquifer groundwater flow direction being westerly towards the coast (DWER, 2024a). Based on topographic elevations this indicates that depth to groundwater varies from approximately 10 m below ground level (BGL) to 44 mBGL (DWER, 2024a).

Groundwater monitoring at the site undertaken between September 2022 and November 2023 by consultant hydrologists Hyd2o indicated that minimum groundwater levels for the site bores were recorded mainly in March 2022 and ranged from 40.78 mAHD to 41.40 mAHD. Maximum groundwater levels were recorded mainly in October 2022 ranging from 41.23 mAHD to 42.13 mAHD (Hyd2o, 2025).

Groundwater availability is currently limited within this area, with the Lake Gnangara subareas of the Perth Superficial Swan aquifer, the Wanneroo confirmed subarea of the Perth Leederville aquifer, and the Wanneroo confined subarea of the Perth-Yarragadee North aquifer all identified to be fully allocated (DWER, 2025)

The following groundwater licences are held for properties within the site (Table 4-1):

Table 4-1: Current Groundwater Licences

Lot Number	Licence Number	Licence Volume
Lot 700 Elliot Road	53795	35,000 kL/year
Lot 29 Elliot Road	96251	12,950 kL/year
Lot 32 Elliot Road	180006	163,150 kL/year
Lot 33 Elliot Road	169281	42,008 kL/year
Lot 34 Elliot Road	76456	4,150 kL/year
Lot 37 Benmuni Road	207394	60,000 kL/year

Lot Number	Licence Number	Licence Volume
Lot 38 Elliot Road	203361	57,650 kL/year
Lot 11 Elliot Road	153256	9,815 kL/year
Lot 10 Elliot Road	107897	10,270 kL/year
Lot 60 Nicholas Road	98646	48,650 kL/year
Lot 61 Nicholas Road	152615	43,400 kL/year
Lot 62 Nicholas Road	66050	5,000 kL/year
Lot 63 Nicholas Road	76617	49,950 kL/year
Lot 65 Nicholas Road	71195	48,000 kL/year
Lot 70 Nicholas Road	168640	6,420 kL/year
Lot 72 Nicholas Road	95232	5,150 kL/year
Lot 73 Nicholas Road	63494	12,575 kL/year

There are no Public Drinking Water Source Areas (PDWSA) located within the site, with the Priority 3 Perth Coastal and Gwelup Underground Water Pollution Control Area located approximately 1.5km west of the site (DWER, 2024a).

4.2.2 Surface water

There are no surface water features present within the site (Landgate, 2024b).

No external surface water catchments drain into the site. All rainfall and surface runoff currently infiltrates through the sandy subsurface profile. Even in major events any diffuse overland flow which may occur in localised areas would be infiltrated on site (Hyd2o, 2025).

4.2.3 Geomorphic Wetlands

There are no geomorphic wetlands mapped within site (Landgate, 2024b), with the closest wetland located approximately 280m to the east of the site (UFI 8105) (Landgate, 2024b).

4.3 Potential Impact Identification and Assessment

The following potential impacts and management actions are identified in relation to inland waters.

4.3.1 Groundwater

Based on the site's large depth to groundwater, development will not require installation of infrastructure to control groundwater levels, and dewatering is unlikely to be required for service installation.

Groundwater quality will be protected through the drainage system design and associated controls as discussed in Section 4.3.2. The development will be connected to the Water Corporation reticulated sewer network which will replace the use of septic tanks onsite which currently occurs.

The proposed change of land use to residential development as well as the removal of market gardens and other horticultural land uses will result in a reduction of nutrient input to the site as discussed in Section 4.3.3.

Although groundwater availability is currently limited in this location, acquisition of groundwater licences will occur as part of the purchase of properties for development ensuring that the water requirements for future Public Open Space areas can be met.

4.3.2 Stormwater drainage design and management

Stormwater management is proposed to be undertaken consistent with DWER water sensitive design practices, via a combination of lot soakwells and street scale infiltration, and biofiltration areas and multiple

use flood storage areas within POS to capture and infiltrate all events on site up to the 1% AEP event (Hyd2o, 2025).

The overall key components of stormwater management of the site are as follows (Hyd2o, 2025):

- Land use types and densities to considerably reduce nutrient application and export relative to existing land use.
- Lots to have soakwells/on-site systems to provide 15mm infiltration of stormwater at source.
- Road runoff to be conveyed using piped drainage, with bottomless manholes used (subject to CoW approval) to reduce bottom end infrastructure requirements.
- Treatment of road runoff within each catchment via specified biofiltration areas for water quality, with POS areas designed to be occasionally inundated for flood management in major events.

Water quality treatment for small events (15mm) is proposed to include the following 9Hyd2o, 2025):

- Non-Structural Controls
  - Planning: Lot product and sizing, POS and storage locations and configuration
  - Landscape: Native plantings and bushland retention, WSUD integration
  - Maintenance: Storage areas, street sweeping manhole education
  - Monitoring: Post development program and performance review
- Structural Controls
  - Catchment Scale Infrastructure: Bioretention areas
  - Local Scale Infrastructure: Soakwells at lot scale, bottomless manholes with roads

Bioretention areas will be sized to retain treat and infiltrate 15mm in accordance with agency requirements. Biofiltration systems will be designed consistent with the Adoption Guidelines for Stormwater Biofiltration Systems (CRC for Water Sensitive Cities, 2015).

With respect to disease vector and nuisance insect management, modelling shows stormwater management areas will have a maximum duration for standing water following small events (<15mm) of less than 6 hours, well within WAPC (2008) requirement of 96 hours (Hyd2o, 2025).

Given the sandy soils and high clearance to groundwater that stormwater can be managed and infiltrated onsite up to the 1% AEP event, and operate fully independently of other precincts and without any cross boundary transfers in or out of the precinct being required (Hyd20, 2025).

4.3.3 Nutrient input and export pre and post development

The UNDO (Urban Nutrient Decision Outcomes) model is a conceptual decision support tool developed by DWER that evaluates nutrient reduction decisions for urban developments on the Swan Coastal Plain. This model has been used to assess nutrient impacts associated with the propsed development (Hyd2o, 2025).

The modelling results indicate a post-development reduction in nutrient export from the site of 60% Total Nitrogen and 59% Total Phosphorus annually compared to modelled pre-development levels is predicted. It is noted that the pre-development nutrient export calculations consider soil types, groundwater gradients, and depth to groundwater. They do not however consider the impact of horticultural use which UNDO doesn't include. As such estimates for the existing land use are therefore likely to be considerably underestimated, therefore the percentage reduction is likely to be higher than noted above (Hyd2o, 2025).

4.3.4 Surface Water and Wetlands

Given that there are no wetlands or surface water features within the site or in close proximity, impacts in relation to this matter is not considered likely.

4.4 Impact Mitigation

The proposed development will manage impacts to inland waters in accordance with the mitigation hierarchy (Table 4-2).

Table 4-2: Inland Waters Mitigation Hierarchy

Mitigation Hierarchy	Assessment and Proposed Actions
Potential Impact	
Inland Waters	• Potential for abstraction of groundwater to result in altered groundwater levels • Potential for stormwater drainage system to allow contaminants to enter groundwater
Mitigation Hierarchy	
Avoidance	• The existing conduction which are conducive the infiltration through the sandy subsurface profile, together with a large separation distance to groundwater will remain • Connection to Water Corporation reticulated sewer network to replace existing septic tanks • Land use types and densities to considerably reduce nutrient application and export relative to existing land use • No wetlands or surface water features are within or in close proximity to the site • With respect to disease vector and nuisance insect management, modelling shows stormwater management areas will have a maximum duration for standing water following small events (<15mm) of less than 6 hours, well within WAPC (2008) requirement of 96 hours. • Stormwater can be managed and infiltrated onsite and can operate independently of other surrounding East Wanneroo development precincts.
Minimisation	• Lots to have soakwells/on-site systems to provide 15mm infiltration of stormwater at source. • Road runoff to be conveyed using piped drainage, with bottomless manholes used (subject to CoW approval) to reduce bottom end infrastructure requirements. • Treatment of road runoff within each catchment via specified biofiltration areas for water quality, with POS areas designed to be occasionally inundated for flood management in major events. Biofiltration systems will be designed consistent with the Adoption Guidelines for Stormwater Biofiltration Systems (CRC for Water Sensitive Cities, 2015). • Non-Structural Controls to be applied in relation to water quality treatment include: ▪ Planning: Lot product and sizing, POS and storage locations and configuration ▪ Landscape: Native plantings and bushland retention, WSUD integration ▪ Maintenance: Storage areas, street sweeping manhole education ▪ Monitoring: Post development program and performance review • Structural Controls to be applied in relation to water quality treatment include: ▪ Catchment Scale Infrastructure: Bioretention areas ▪ Local Scale Infrastructure: Soakwells at lot scale, bottomless manholes with roads

4.5 Predicted Outcome

Implementation of the LSP to facilitate future urban development will result in the following predicted outcomes for inland waters:

- The existing conductions which are conducive the infiltration through the sandy subsurface profile, together with a large separation distance to groundwater will remain
- Reduction in nutrient inputs and groundwater abstraction across the site
- Avoidance of impacts to groundwater quality

- Stormwater can be managed and infiltrated onsite and can operate independently of other surrounding East Wanneroo development precincts.

5 Flora and Vegetation

5.1 Key Policies and Guidance

Relevant policy and guidance documents for vegetation and flora, which have informed site-specific investigations and/or have been used to assess potential impacts, include:

- Environmental Factor Guideline – Flora and Vegetation (EPA ,2016a)
- EPA Guidance Statement No. 33 – Environmental Guidance for Planning and Development (EPA, 2008)
- Environmental Factor Guideline – Flora and Vegetation (EPA ,2016a)
- Technical Guidance – Flora and Vegetation Surveys for Environmental Impact Assessment (EPA, 2016b)
- State Planning Policy 2.8 Bushland Policy for the Perth Metropolitan Region (WAPC, 2010)
- State Planning Policy 3.7 Planning in Bushfire Prone Areas (WAPC, 2015)
- City of Wanneroo local planning policies including:
  - Local Planning Policy 1.1 - Conservation Reserves
  - Local Planning Policy 4.8 - Tree Preservation Policy
  - Local Planning Policy 5.3 - East Wanneroo
  - City of Wanneroo- Local Biodiversity Plan 2018/19-2023/24 (CoW, 2018)

5.2 Receiving Environment

5.2.1 IBRA Region

The Interim Biogeographic Regionalisation for Australia (IBRA) defines 89 regions based on climate, geology, landforms and characteristic vegetation and fauna (DCCEEW, 2022). The site lies within the Swan Coastal Plain (SWA) IBRA region and, at a finer scale, within the Perth subregion (SWA2).

5.2.1.1 Vegetation Associations

Broad scale mapping of pre-European vegetation within the Perth region was undertaken by Beard (1976) which recorded major categories of plants. Shepherd et al. (2002) reassessed and digitised Beard's mapping Based on this mapping there are a total of 819 vegetation associations mapped across the state.

The site is mapped containing the following broad vegetation association (Landgate, 2024b):

- Spearwood_6: Jarrah, marri and wandoo *Eucalyptus marginata, Corymbia calophylla, E. wandoo*
- Bassendean_949: Other acacia, banksia, peppermint, cypress pine, casuarina, York gum *Acacia* spp., *Banksia* spp., *Agonis flexuosa, Callitris* spp., *Allocasuarina* spp., *Eucalyptus loxophleba*.

The status of Spearwood_6 vegetation association at the state, regional and local level is presented in

Table 5-1. The remnant native vegetation of the Spearwood_6 association within the Swan Coastal Plain bioregion is approximately 23.7%, with approximately 21.9% remaining within the City of Wanneroo.

Table 5-1: Spearwood 6 - Vegetation Statistics

Area	Pre-European extent	Current Extent	% Remaining
Western Australia	56,343 ha	13,36 2ha	23.72 %
Swan Coastal Plain (SCP)	56,343 ha	13,362 ha	23.72 %
SCP sub-region - Perth	56,343 ha	13,362 ha	23.72 %
City of Wanneroo	12,662 ha	2,777 ha	21.94 %

Source: GoWA, 2019a

The status of Bassendean_949 vegetation association at the state, regional and local level is presented in Table 5-2 The remnant native vegetation of the Bassendean_949 association within the Swan Coastal Plain bioregion is approximately 57.3%, with approximately 46.3% remaining within the City of Wanneroo.

Table 5-2 Bassendean 949 Vegetation Statistics

Area	Pre-European extent	Current Extent	% Remaining
Western Australia	218,194 ha	123,104 ha	56.4 %
Swan Coastal Plain (SCP)	209,983 ha	120,288 ha	57.3 %
SCP sub-region - Perth	184,476 ha	104,129 ha	56.5 %
City of Wanneroo	37,138 ha	17,196 ha	46.3 %

Source: GoWA, 2019a

5.2.1.2 Vegetation Complexes

Vegetation at the site is identified to be part of the Karrakatta Complex-Central and South which is described as "Predominantly open forest of *Eucalyptus gomphocephala* (Tuart) - *Eucalyptus marginata* (Jarrah) - *Corymbia calophylla* (Marri) and woodland of *Eucalyptus marginata* (Jarrah) - *Banksia* species. *Agonis flexuosa* (Peppermint) is co-dominant south of the Capel River" (Heddle et al., 1980).

Approximately 23.5% of the original extent of the Karrakatta Complex-Central and South remains within the Swan Coastal Plain bioregion with approximately 12.9% remaining within the City of Wanneroo (Table 5-3).

Table 5-3 Karrakatta Complex-Central and South

Area	Pre-European Extent (ha)	Current Extent (ha)	% Remaining
Swan Coastal Plain	53,081 ha	12,467 ha	23.5 %
Perth Metropolitan Region	34,597 ha	4,292 ha	12.4 %
City of Wanneroo	10,539 ha	1,359 ha	12.9 %

Source: GoWA, 2019b

The National Objectives and Targets for Biodiversity Conservation 2001-2005 recognises that retention of 30% or more of the pre-clearing extent of each ecological community is necessary if Australia's biological diversity is to be protected (ANECC, 2000). However, State Planning Policy 2.8 – Bushland policy for the Perth Metropolitan Region (WAPC, 2010) and EPA Guidance Statement 33 (EPA, 2008) recognises the Perth Metropolitan Region as a 'constrained area' and establishes a target of 10% retention for vegetation complexes. The Karrakatta Complex – Central and South has greater than 10% remaining within the Swan Coastal Plain, Perth Metropolitan Region and the City of Wanneroo.

5.2.2 Flora and Vegetation Surveys

Flora and vegetation surveys extending over the site include:

- Preliminary Vegetation Assessment in December 2017 to provide reconnaissance survey level information to inform the DSP. This was undertaken by Emerge Associates (2018).
- Detailed Flora and Vegetation Survey with field work undertaken during spring 2022 by PGV Environmental (2023) of targeted sites over eight lots within Precinct 3 (Lots 3, 11, 29, 30, 40, 42 and 43 Elliott Road and Lot 62 Nicholas Road, Wanneroo).
- Detailed Flora and Vegetation Survey with field work undertaken during spring 2024 by Ecoscape for the entire Precinct 3 area (Ecoscape, 2025).

Key information regarding these surveys is summarised below.

5.2.2.1 Preliminary Vegetation Assessment (2017)

This survey was undertaken to collate available desktop information regarding the flora and vegetation characteristics of the DSP area, with targeted field work undertaken to generally verify the results, where possible. The survey included undertaking targeted investigations to identify vegetation potentially representative of Floristic Community Type 20a which is listed as a Threatened Ecological Community (TEC) under the *Biodiversity Conservation Act 2016* (BC Act) (Emerge Associates, 2018).

Field work for the survey was undertaken between 5-8 December 2017. This included rapid assessment at selected field survey locations. Locations in proximity to Precinct 3 include sites 47, 48, 49, 52 and 53 as shown on Plate 5-1. It is noted that where a sample point was located within public land the botanist could access the vegetation, whereas for sample points in private land the survey was completed from the road reserve (Emerge Associates, 2018).

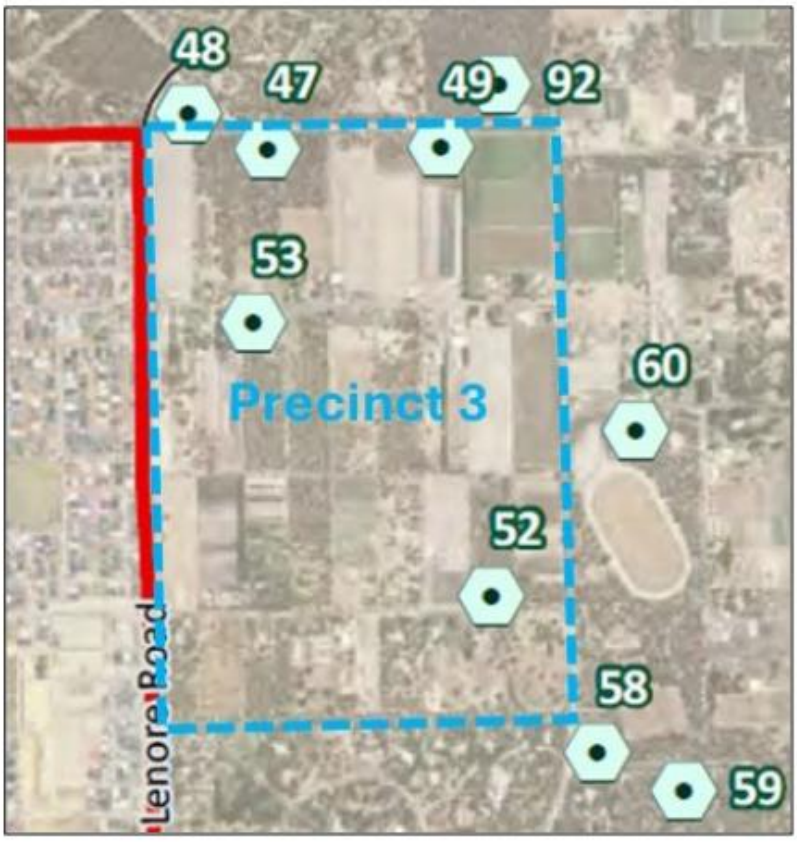

Plate 5-1: Preliminary Vegetation Assessment Survey Locations in Proximity to Precinct 3

Source: Emerge Associates, 2018

5.2.2.2 Detailed Flora and Vegetation Survey (2022)

This survey involved a desktop review, field survey utilising quadrats and a site walkover to record vegetation and flora details, data analysis including floristic community type analysis, and reporting. The field work was undertaken on 26 and 30 September, and 25 October 2022. Landholdings which formed part of this survey included:

- Lots 3, 11, 29, 30, 40, 42 and 43 Elliott Road
- Lot 62 Nicholas Road

Lot locations are highlighted on Plate 5-2. A copy of the PGV Environmental report is provided in Appendix 3.

Plate 5-2: Flora and Vegetation Survey Areas (2022)

Source: PGV Environmental, 2023

5.2.2.3 Detailed Flora and Vegetation Survey (2024)

The field survey was undertaken between 17 to 19 September 2024 which is within the optimal period for a primary survey within the bioregion (EPA, 2016). The survey involved (Ecoscape, 2025):

- Desktop analysis
- Establishment of at least 3 quadrats per vegetation type where there was sufficient extent to do so
- Targeted searches for threatened and Priority flora identified during the desktop analysis
- Recording of introduced species
- Assessment of vegetation type and vegetation condition
- Floristic analysis to identify Floristic Community Types (FCTs)
- Assessment of vegetation potentially representative of the Banksia Woodlands of the Swan Coastal Plain Threatened Ecological Community (TEC)

A copy of the Ecoscape (2025) biological assessment report for Precinct 3 is provided in Appendix 4..

5.2.3 Vegetation Type

5.2.3.1 Preliminary Vegetation Assessment (2017)

Vegetation type within the East Wanneroo DPS area were identified to broadly comprise banksia and eucalypt woodland communities (Emerge Associates, 2018). Data from the Emerge Associates survey points in proximity to Precinct 3 are summarised on Table 5-4.

Table 5-4: Preliminary Vegetation Assessment Sampling Data

Site ID	Dominant Species	Provisional FCT	Condition
47	Bm, Bi, Af, Ba, Dt, Ah, Js, Cm	?20a	Very Good
48	Em, Af, Bm, Ba, Xspp, Ah, Hh, Mp, Dr, Cf, Hr, Hpu, Dd, Sl, Mp, Dfl, An	?20a	Excellent
49	No data provided	No data provided	No data provided
52	Af, Bm, Ba, Xp, Dt, Dn, Js, Em, Sr, Mp, Ap, Db, Hh	?20a	Very Good
53	Em, Af, Ba, Bm, Xp, Ah, Xspp, Dd, Mp, Sl	?20a	Very Good

Xsp=Xanthorrhoea spp

5.2.3.2 Detailed Flora and Vegetation Survey (2022)

The 2022 Detailed Flora and Vegetation Survey (Appendix 3) identified 4 vegetation types to be present onsite, with descriptions provided in Table 5-5. The vegetation type mapping from this survey is provided on Plate 5-3.

It was noted that the vegetation types are similar structurally, with all four types being Low Open Woodlands, differing slightly with the dominant tree species. The understorey composition was also similar between the three vegetation types that were in Very Good condition (PGV Environmental, 2023).

Table 5-5: Vegetation Types (2022)

Type	Description
BaBmAf *Banksia attenuata/B. menziesii/ Allocasuarina fraseriana* Low Open Woodland over *Hibbertia hypericoides* Open Low Heath	Recorded in two separate locations on the site. *Banksia attenuata, B. menziesii* and *Allocasuarina fraseriana* co-dominated the tree canopy and averaged 5m high. Common understorey species included *Hibbertia hypericoides, Eremaea pauciflora, Xanthorrhoea preissii, Calytrix fraseri, Mesomelaena pseudostygia* and *Desmocladus flexuosus.* The soil type is dark grey-brown sand. Quadrats EW 1 and 3 are representative of this vegetation type.
EmAfBaBm *Eucalyptus marginata/ Allocasuarina fraseriana/Banksia menziesii/B. attenuata* Low Open Woodland over *Calytrix fraseri/ Xanthorrhoea preissii/Hibbertia hypericoides/Mesomelaena pseudostygia* Open Low Heath	Recorded in two separate locations on the site. Jarrah (*Eucalyptus marginata*) was common in this vegetation type but was mostly absent from the others. *Banksia attenuata, B. menziesii* and *Allocasuarina fraseriana* were also common with *B. prionotes* present in some areas. Common understorey species included *Calytrix fraseri, Xanthorrhoea preissii, Hibbertia hypericoides, Mesomelaena pseudostygia* and *Trachymene pilosa*. The soil type is dark orange-brown sand. Quadrats EW 2 and 6 are representative of this vegetation type.
AfBaBm *Allocasuarina fraseriana/Banksia attenuata/ B. menziesii* Low Open Woodland over *Calytrix fraseri/ Hibbertia hypericoides/Lyginia barbata/Mesomelaena pseudostygia* Closed Low Heath	Recorded through the central part of the site on three lots and very similar to the BaBmAf except that *Allocasuarina fraseriana* (Sheoak) is usually taller. Common understorey species included *Calytrix fraseri, Hibbertia hypericoides, Lyginia barbata, Mesomelaena pseudostygia* and *Eremaea pauciflora.* The soil type is orange-brown sand. Quadrats EW 4 and 5 are representative of this vegetation type.
Af *Allocasuarina fraseriana* Low Open Woodland over weeds	One small area of this vegetation type was recorded at the southern end of Lot 62. *Allocasuarina fraseriana* trees were up to 6m high with only a few *Banksia attenuata* trees. The understorey was mainly Perennial Veldtgrass (*Ehrharta calycina*). The soil type is light orange-brown sand. No quadrat was sampled in this small Degraded area.

Source: PGV Environmental, 2023

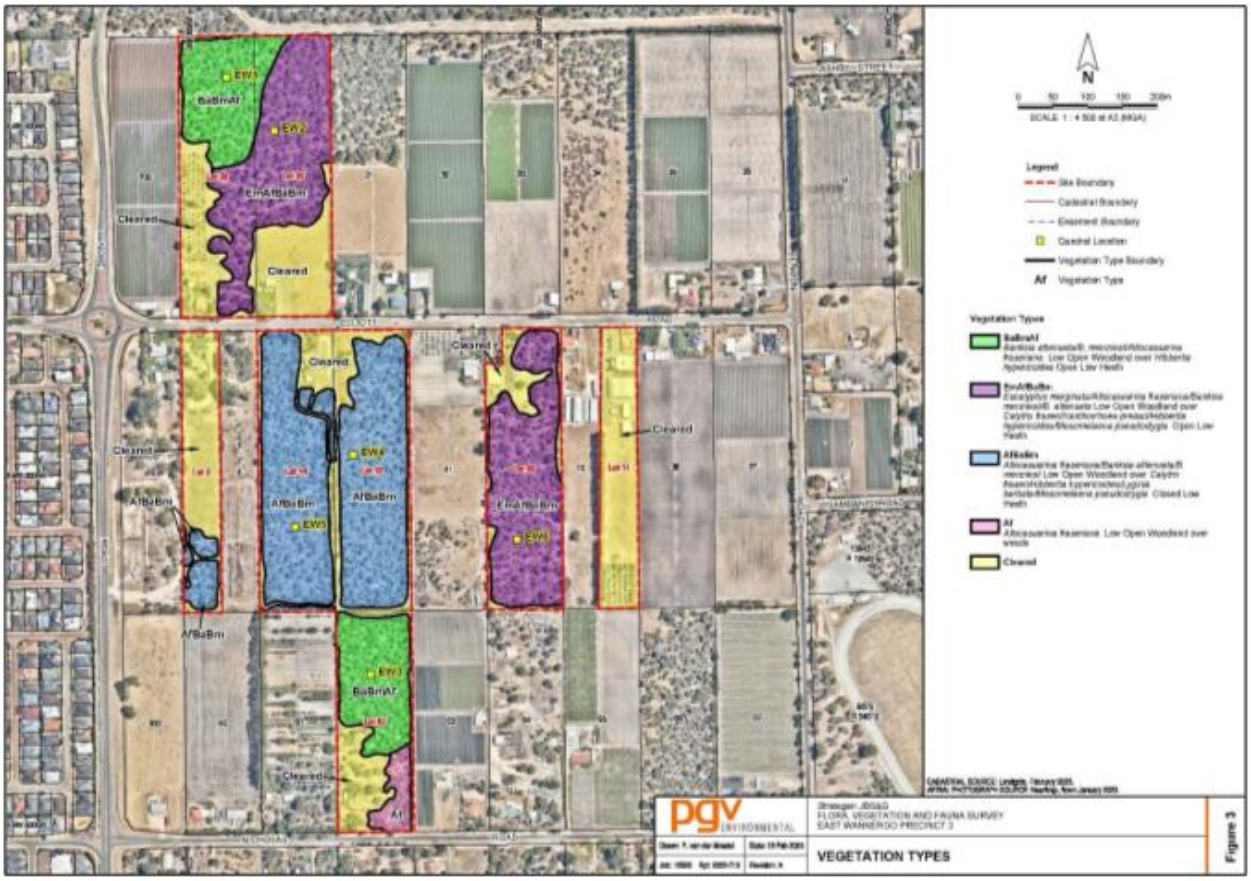

Plate 5-3: Vegetation Units (2022)

Source: PGV Environmental, 2023

5.2.3.3 Detailed Flora and Vegetation Survey (2024)

Two vegetation types were recorded from within the survey area during the 2024 Detailed Flora and Vegetation Survey based on a combination of structural vegetation type as identified in the field, floristic analysis and desktop review (Ecoscape, 2025). The vegetation type descriptions are provided in Table 5-6 with mapping provided on Figure 5.

Table 5-6: Vegetation Types (2024)

Mapping Unit	Description	Area (ha) and extent (%)
BaLOF	*Banksia attenuata, Allocasuarina fraseriana* and *Banksia menziesii* low open forest over *Eremaea pauciflora* var. *pauciflora, Xanthorrhoea brunonis* and *Daviesia divaricata* subsp. *divaricata* mid open shrubland over *Mesomelaena pseudostygia* and *Hibbertia hypericoides* subsp. *hypericoides* low open sedgeland/shrubland on a low undulating sandy plain	19.9 ha (14.8%)
EmmLW	*Eucalyptus marginata* subsp. *marginata, Banksia prionotes* and *Allocasuarina fraseriana* low woodland over *Xanthorrhoea brunonis* and *Daviesia nudiflora* subsp. *nudiflora* mid sparse shrubland over *Hibbertia hypericoides* subsp. *hypericoides* and *Mesomelaena pseudostygia* low sparse shrubland/sedgeland on a low undulating sandy plain	13.0 ha (9.6%)
Not native vegetation/ cleared	Not native vegetation/ cleared	102.0 ha (75.6%)
Total		134.9 ha

The Ecoscape assessment identified 2 vegetation types compared to the 4 mapped by PGV Environmental. This was based on the conclusion that the vegetation was highly similar with slightly different dominant species, but these did not warrant separation.

5.2.4 Vegetation Condition

Vegetation condition within all three surveys was assessed against the Keighery (1994) scale with the vegetation condition description provided as follows (Table 5-7).

Table 5-7: Vegetation Condition Categories

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance or damage caused by human activities since European settlement.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species. Damage to trees caused by fire, the presence of non-aggressive weeds and occasional vehicle tracks.
Very Good	Vegetation structure altered, obvious signs of disturbance. Disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds at high density, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees and shrubs.

Source: EPA, 2016

5.2.4.1 Preliminary Vegetation Assessment (2017)

Observation made by Emerge Associates (2018) relating to vegetation at targeted locations within this precinct was that condition ranged from Very Good to Excellent (Table 5-4).

5.2.4.2 Detailed Flora and Vegetation Survey (2022)

PGV Environmental (2023) identified vegetation within the survey area to range in condition from Very Good to Completely Degraded, with numerous portions of the survey area being cleared. The PGV Environmental vegetation condition mapping is provided on Plate 5-4.

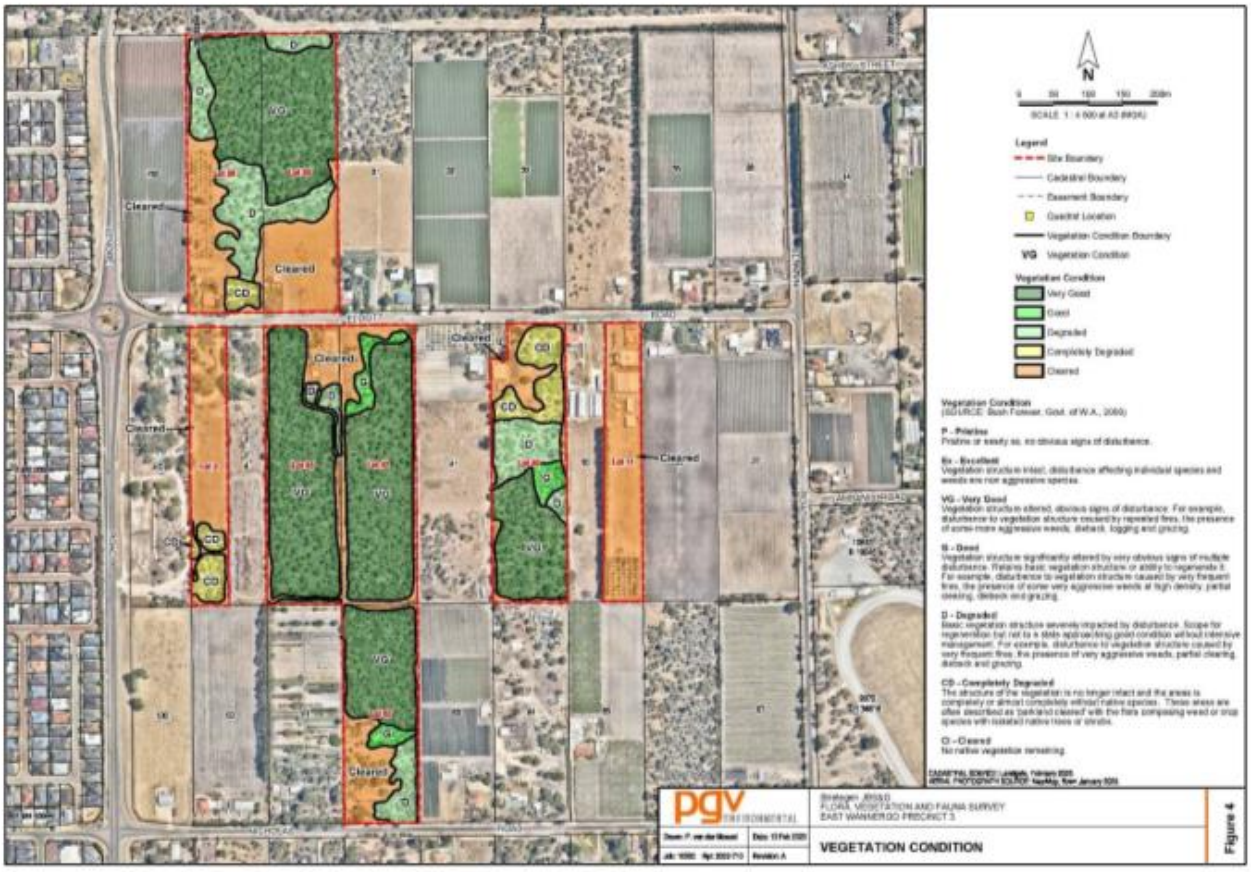

Plate 5-4: Vegetation Condition (2022)

Source: PGV Environmental, 2023

5.2.4.3 Detailed Flora and Vegetation Survey (2024)

The vegetation condition within the survey area was assessed by Ecoscape to range from Completely Degraded to Very Good. The main factors affecting vegetation condition were clearing associated with rural/rural residential land uses and the presence and abundance of weeds. Degraded and Completely Degraded areas mostly occurred adjacent to market gardens, cleared areas or rural dwellings. Cleared areas were also present across the site (Ecoscape, 2025). The mapped vegetation condition extents are presented on Table 5-8.

Table 5-8: Vegetation Condition (2024)

Vegetation Condition	Area (ha)	Extent (%)
Very Good	11.0 ha	8.2%
Good	10.4 ha	7.7%
Degraded	9.1 ha	6.7%
Completely Degraded	2.4 ha	1.8%
Not native vegetation/cleared	102.0 ha	75.6 %
Total	134.9 ha	100%

5.2.5 Floristic Community Types

Desktop review has identified the following Floristic Community Types representing Threatened Ecological Communities (TECs) and Priority Ecological Communities (PECs) as having the potential to occur within the site (Ecoscape, 2025) (Table 5-9).

Table 5-9: FCT Desktop Review Results

Ecological Community	Cth Status	WA Status	Likelihood of occurrence
Assemblages of plants and invertebrate animals of tumulus (organic mound) springs of the Swan Coastal Plain Equivalent to: • Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain)	EN	BCA - CR	Known to occur in 10km buffer area to the site
Banksia Woodlands of the Swan Coastal Plain (Banksia WL SCP) ecological community Incorporates: • *Banksia attenuata* woodlands over species rich dense shrublands (SCP20a as originally described in Gibson *et al.* 1994) • Low lying *Banksia attenuata* woodlands or shrublands (SCP21c) • Swan Coastal Plain *Banksia attenuata - Banksia menziesii* woodlands (SCP23b) • *Banksia ilicifolia* woodlands, southern Swan Coastal Plain (SCP22)	EN	P3 – PEC BCA – CR P3 – PEC P3 – PEC P3 -PEC	Likely
Callitris preissii (or *Melaleuca lanceolata*) forests and woodlands of the Swan Coastal Plain (SCP30a as originally described in Gibson et al. 1994)		BCA - CR	
Coastal shrublands on shallow sands (SCP29a)		P3 - PEC	
Empodisma peatlands of southwestern Australia	EN		May
Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion	CR		Likely to occur in 10km buffer area to the site
Northern Spearwood shrublands and woodlands (SCP24)		P3 – PEC	
Southern *Eucalyptus gomphocephala-Agonis flexuosa* woodlands (SCP25)		P3 – PEC	
Tuart (*Eucalyptus gomphocephala*) Woodlands and Forests of the Swan Coastal Plain ecological community Equivalent to: • Tuart (*Eucalyptus gomphocephala*) woodlands of the Swan Coastal Plain	CR	P3 - PEC	Likely

Source: Ecoscape, 2025

Abbreviations:

- *BCA – Biodiversity Conservation Act 2016*
- *CR – Critically Endangered*
- *EN – Endangered*
- *P3-PEC – Priority Ecological Community (Level P3)*

5.2.5.1 Preliminary Vegetation Assessment (2017)

The preliminary vegetation assessment noted that Floristic Community Type (FCT) 20a is a Banksia Woodland community and is considered 'likely' to 'potentially' to occur within the with East Wanneroo DSP area, including within Precinct 3. This FCT is characterised by a dense species rich shrub layer and understorey species such as *Cyathochaeta equitans, Dasypogon obliquifolius* and *Mesomelaena tetragona*. Broadly speaking FCT 20a is known to occur in two broad areas on the Swan Coastal Plain (SCP), including an area in the northern central SCP within the City of Wanneroo and an area on the eastern SCP roughly centred on the localities of Forrestfield and Wattle Grove (Emerge Associates, 2018).

FCT 28 is a Banksia Woodland community which is also considered to potentially occur within the DSP area. Vegetation considered likely to be FCT 28 often included *Eucalyptus gomphocephala* (tuart) in the canopy layer, which was not recorded in any Keighery et al. (2012) sample sites assigned to FCT 20a. However, the transition boundary between FCT 20a and FCT 28 on the western side of the DSP areas is unclear and a portion of 'FCT 20a/28' was mapped to indicate that an intergrade is expected (Emerge Associates, 2018).

An extract of the provisional FCT mapping provided prepared for the DSP is provided in Plate 5-5.

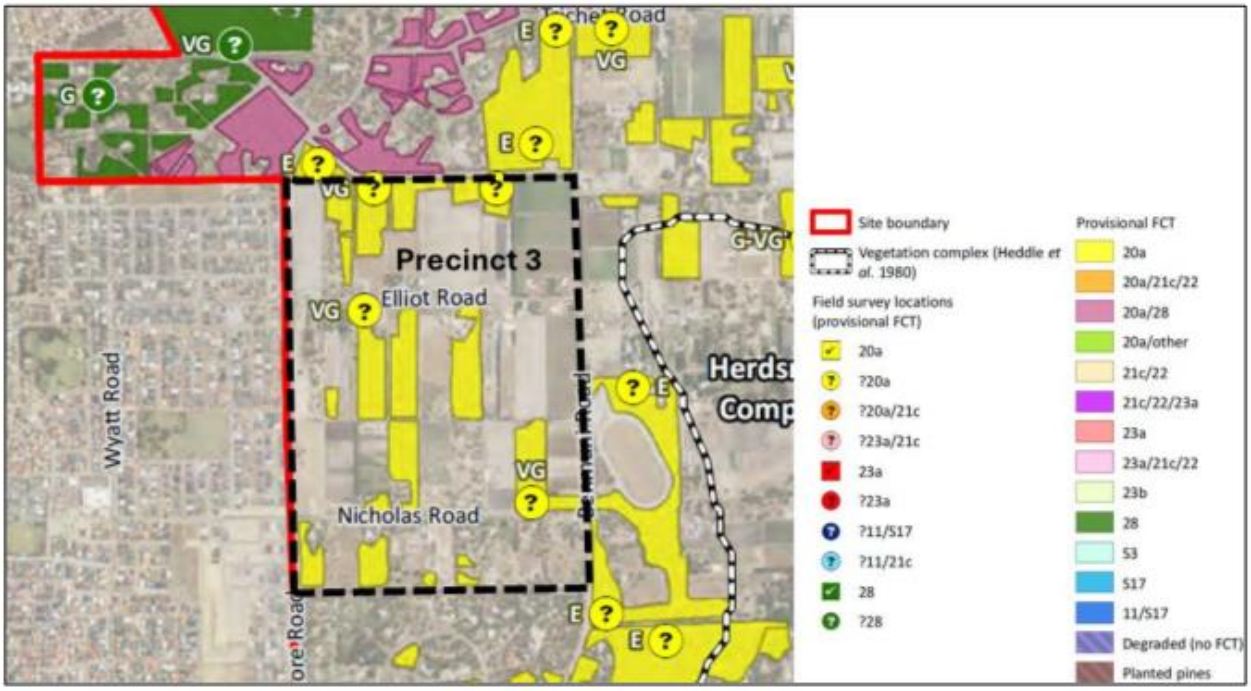

Plate 5-5: East Wanneroo DSP – Provisional FCT mapping

Source: Emerge Associates, 2018

As noted in Table 5-9, FCT 20a is identified as a Threatened Ecological Community (TEC) under the WA BC Act and forms part of the Banksia Woodlands of the Swan Coastal Plain (Banksia WL SCP) TEC under the EPBC Act.

FCT 28 is not listed as a PEC nor a TEC; however, it forms part of the Banksia WL SCP ecological community (TEC under the EPBC Act, and PEC under the BC Act).

5.2.5.2 Detailed Flora and Vegetation Survey (2022)

Six quadrats were analysed to determine the FCT of each quadrat. The details of the analysis are provided in (Appendix 3) with the results described below and summarised on Table 5-10.

- Vegetation on the site most likely corresponds to SCP 28 'Spearwood *Banksia attenuata* or *Banksia attenuata – Eucalyptus marginata* woodlands'.

- It was concluded that is it less likely that SCP 20a occurs on the site.
- The result for Quadrat EW 4 was SCP 6 'Weed dominated wetlands on heavy soils' appears to be an error as the quadrat only contains 6 weeds out of 36 species recorded and the site is not a wetland on heavy soils.

Table 5-10: Floristic Community Type Analysis (2022)

Quadrat	FCT Assigned	Conservation Status State	Conservation Status Cth
EW1, 2, 3, 5 and 6	SCP28 – Spearwood Banksia attenuata or Banksia attenuata – Eucalyptus marginata woodlands	Not listed (Part of Banksia WL SCP – Priority 3	Part of the Endangered Banksia WL SCP
EW4	SCP6 – Weed dominated wetlands on heavy soils	Not Listed	Not Listed

Source: PGV Environmental, 2023

5.2.5.3 Detailed Flora and Vegetation Survey (2024)

FCT analysis was undertaken by Ecoscape (2025) for the vegetation quadrat data from the spring 2024 Detailed Flora and Vegetation Survey. The PGV 2022 survey quadrats were also included in the analysis.

The results indicate that vegetation within the survey area most likely corresponds with SCP28 'Spearwood *Banksia attenuata* or *B. attenuata–Eucalyptus* woodlands'. This concurs with the findings of the 2022 FCT analysis.

5.2.5.4 Floristic Community Type SCP20a

As noted above SCP20a which is listed as a Critically Endangered community under the BC Act and forms part of the Federally listed Banksia WL SCP ecological community listed as Endangered under the EPBC Act was identified through the desktop review undertaken as part of the Preliminary Vegetation Assessment to have the potential to occur in this location.

PATN analysis of vegetation quadrat data from both the 2022 and 2024 detailed flora and vegetation surveys has confirmed that the vegetation appears representative of SCP28 rather than SCP20a. This analysis was performed by 2 separate ecological firms (i.e. Plant Ecology Consulting and Ecoscape) who both came to the same conclusion.

5.2.6 Banksia Woodlands of the Swan Coastal Plain

Banksia WL SCP is identified as a PEC by the DBCA, and a Threatened Ecological Community (TEC) under the Commonwealth EPBC Act. The Banksia WL SCP community is a conglomerate of a number of Banksia-dominated FCTs recognised at the State level.

The 2017 preliminary vegetation assessment identified the potential presence of vegetation representative of the Banksia WL SCP ecological community at the site (Emerge Associates, 2018).

The 2022 Detailed Flora and Vegetation Survey noted that vegetation in Good and Very Good condition would meet the requirements of the Bankia WL SCP community diagnostic criteria (Plate 5-6).

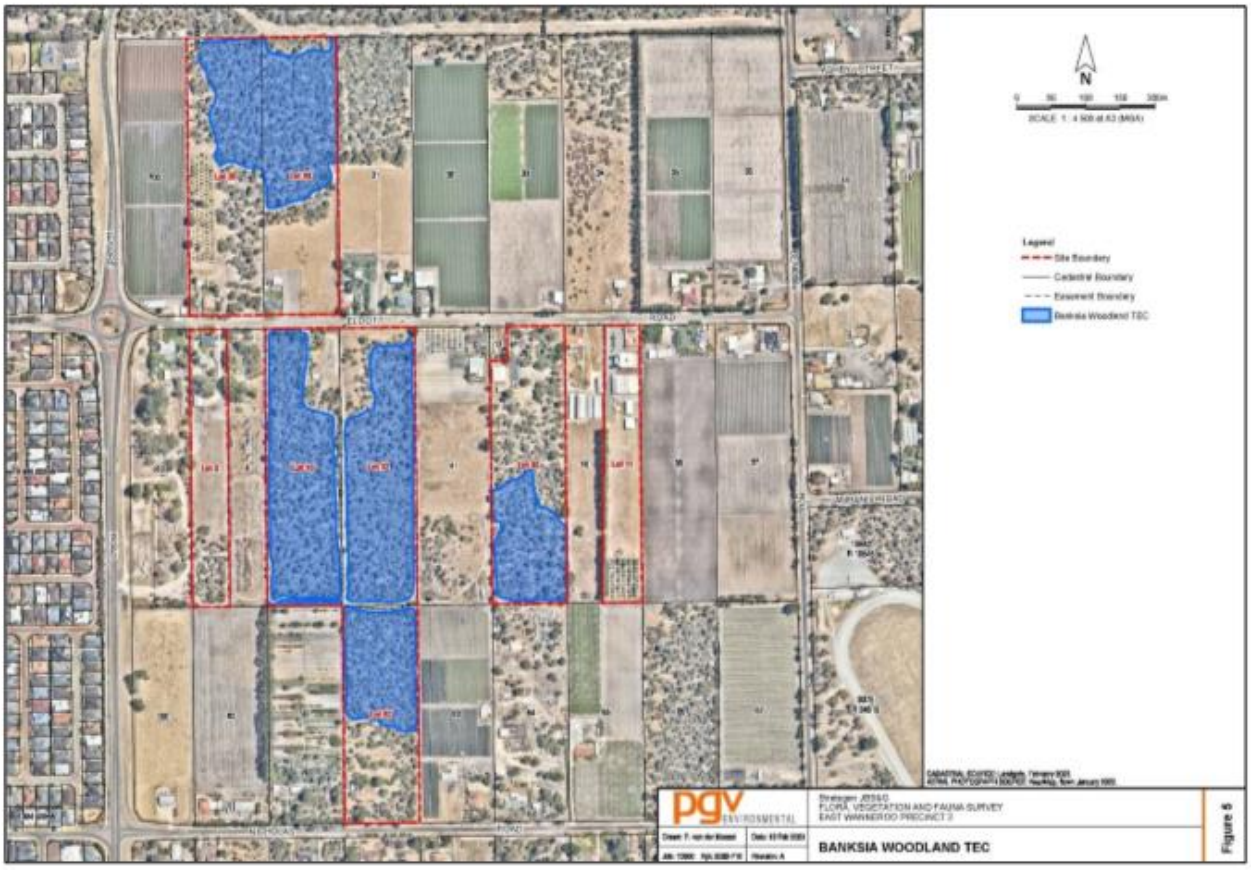

Plate 5-6: Banksia Woodland of the Swan Coastal Plain ecological community – 2022 survey findings

Source: PGV Environmental, 2023

The 2024 Detailed Flora and Vegetation Survey assessed the potential presence of the Banksia WL SCP community across the entire site. The TEC key diagnostic criteria assessment relevant to the site as prepared by Ecoscape (2025) is summarised in Table 5-11.

Table 5-11: TEC Key Diagnostic Criteria Assessment (2024)

Category	Key characteristics (TSSC, 2016)	Assessment
Location and physical environment	The Banksia Woodlands ecological community primarily occurs in the Swan Coastal Plain IBRA bioregion.	Both vegetation types occur in the Swan Coastal Plain IBRA bioregion.
Soils and landform	The Banksia Woodlands ecological community typically occurs on well drained, low nutrient soils on sandplain landforms.	Both vegetation types occur on a low undulating sandy plain with leached grey or pale yellow soil.
Structure and composition	Low woodland to forest with an upper layer dominated or co-dominated by: • *Banksia attenuata* • *Banksia menziesii* • *Banksia prionotes* • *Banksia ilicifolia.*	Vegetation type BaLOF was co-dominated by *Banksia attenuata* and *B. menziesii* in the upper stratum. Vegetation type EmmLW was co-dominated by *Banksia prionotes* in the upper stratum.
	May also include an emergent tree layer with *Corymbia calophylla, Eucalyptus marginata* or less commonly *E. gomphocephala.*	Vegetation type EmmLW was characterised by emergent *Eucalyptus marginata* subsp. *marginata*.

Category	Key characteristics (TSSC, 2016)	Assessment
	Other trees of a medium height may be present and may be codominant with the Banksia species, including: • *Eucalyptus todtiana* • *Nuytsia floribunda* • *Allocasuarina fraseriana* • *Callitris arenaria* • *Callitris pyramidalis* • *Xylomelum occidentale.*	*Allocasuarina fraseriana* was co-dominant with Banksia species in both vegetation types.
	The understorey typically contains a high to very high diversity of shrubs and herbs.	The overall floristic composition was moderate in diversity with an average of 35 understory species per quadrat, including shrubs and herbs. Additional species (particularly ephemerals and herbs) are considered likely to occur during more favourable seasonal conditions.
Vegetation condition	A patch should meet at least the Good Condition category and meet the following minimum patch sizes: • Pristine: no minimum patch size applies • Excellent: 0.5 ha or 5,000 m^2 • Very Good: 1 ha or 10,000 m^2 • Good: 2 ha or 20,000 m^2.	The patches onsite have vegetation in Good or better condition with total extents exceeding the minimum size criteria of 2 ha. Other areas in Good or Very Good condition did not meet the relevant minimum size thresholds and were considered as separate patches due to the distance of separation.

The extent of Banksia WL SCP ecological community mapped onsite is shown on Figure 5 which has a total area of 17.9 ha (7.6 ha EmmLW and 10.3 ha BaLOF).

Patches within both vegetation types are considered to represent the TEC based on floristic composition, structural formation, landform association and vegetation condition. While average floristic diversity was considered moderate (and not high or very high which typically characterises the TEC), high disturbance pressures (particularly from surrounding land uses) combined with decreasing annual rainfall for the region are likely impacting diversity of the native vegetation and, therefore, the floristic diversity of the patches is considered adequate to meet the criteria of the TEC (Ecoscape, 2025).

5.2.7 Conservation Significant Flora

The 2022 Detailed Flora and Vegetation survey recorded a total of 168 flora taxa, including 38 introduced species across the survey area. No Threatened or Priority flora species were recorded (PGV Environmental, 2023).

The Ecoscape desktop review identified 50 conservation significant flora species as having potential to occur at the site. The list of species and a likelihood assessment are provided in Appendix 4.

The 2024 Detailed Flora and Vegetation Survey identified a total of 208 vascular flora taxa from 151 genera and 58 families from the quadrats, opportunistic observations and searches for conservation-listed flora (Ecoscape, 2025).

No Commonwealth EPBC Act nor Western Australian BC Act-listed Threatened Flora were recorded during the 2024 field survey. No taxa that were not identified with certainty resembled any currently described Threatened or Priority Flora (Ecoscape, 2025).

One Priority 2 taxon was recorded during the field survey, *Poranthera moorokatta* (one plant), from Lot 43 (Figure 5) in association with *Allocasuarina fraseriana, Banksia attenuata* and *Eucalyptus marginata* subsp. *marginata* mid woodland vegetation on a low, gently undulating grey sandy plain. This species is a poorly

known herb growing to 2 cm in height. According to Florabase (2024) there are 15 records of this species in the Swan Coastal Plain region with a distribution from Cervantes to Busselton. The majority of known records are located in the Perth metropolitan region (Ecoscape, 2025).

5.2.8 Introduced Flora

64 introduced flora species (weeds) were recorded in the quadrats and opportunistically during traverses through the survey area, representing approximately 31% of the overall flora inventory. Weeds were present in all quadrats and density varied, ranging from a minimum of <1% cover to a maximum of 30% cover. The mean weed cover per quadrat was 10.3% (Ecoscape, 2025).

Two of the weeds recorded (**Asparagus asparagoides* and **Opuntia stricta*) are Weeds of National Significance (WoNS) and Declared Pest plants. **Asparagus asparagoides* (Bridal Creeper) was recorded from Degraded roadside bushland along Nicholas Road (adjacent to Lot 66), totalling one population with three plants. **Opuntia stricta* (Common Prickly Pear) was recorded in Degraded bushland in two plots (within Lots 34 and 40 Elliot Road), totalling two populations with four plants (Ecoscape, 2025).

The Department of Primary Industries and Regional Development (DPIRD) noted that **Asparagus asparagoides* is classified as a s22(2) Declared Pest with the control/keeping category noted to be Exempt. **Opuntia stricta* is classified by DPIRD as s22(2) with the control/keeping category being C3. Based on these DPIRD categories the **Opuntia stricta* require management to prevent the spread of seed or plant parts (DPIRD, 2025).

5.2.9 Bush Forever

Two Bush Forever (BF) sites intersect Precinct 3 being (Landgate, 2024b):

- BF Site 471 – High Road Bushland, Wanneroo
- BF Site 327 – Badgerup Lake and Adjacent Bushland, Wanneroo

The location of these site is shown on Plate 5-7.

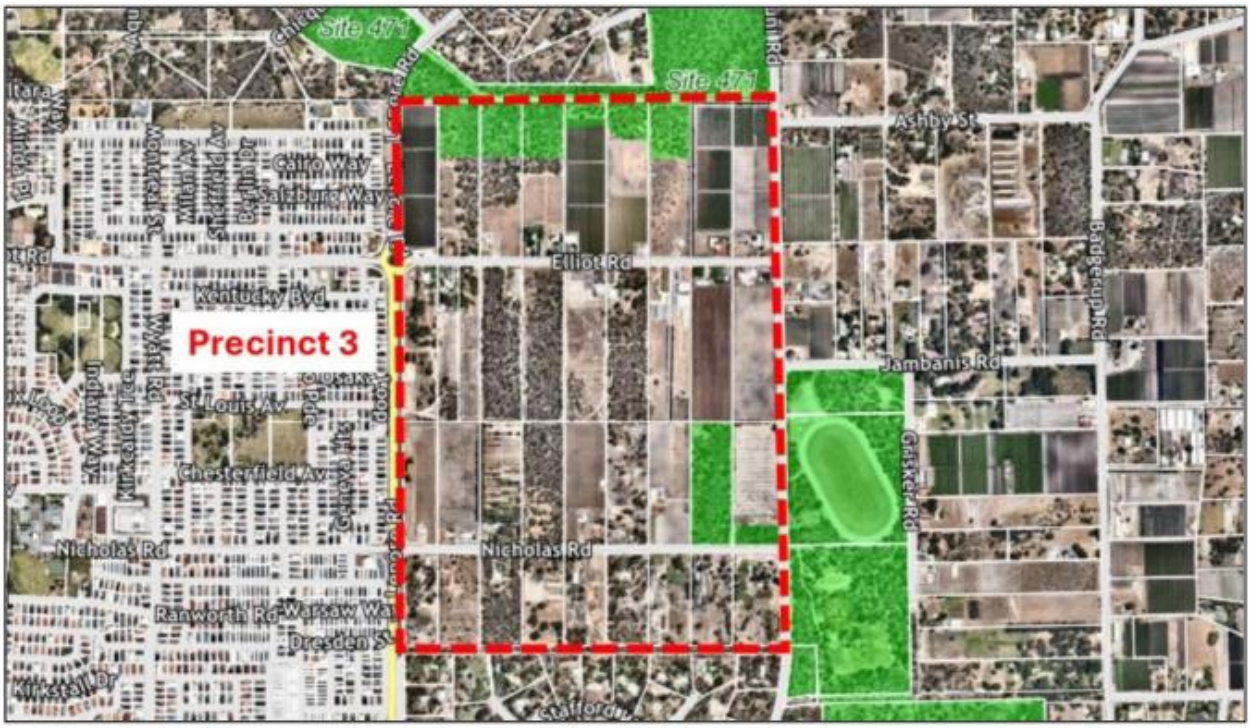

Plate 5-7: Bush Forever sites

Source: MNG, 2025; after GoWA, 2000

BF site 471 is shown as Regional Open Space under the East Wanneroo DSP and BF Site 327 is identified as 'Parklands – Subject to Confirmation' (Appendix 1).

5.2.10 Local Natural Areas and Ecological Linkages

The City of Wanneroo Local Biodiversity Plan identifies that Precinct 3 contains a number of Local Natural Areas (LNAs) associated with remnant vegetation as shown on Plate 5-8. These areas are defined as all unprotected natural areas over which the City of Wanneroo can exercise the most control through its decision-making powers, policies and reserve management. Local Natural Areas include (CoW, 2018):

- Natural areas located on private property, which the City has some control over through Policy and decision making (such as planning approvals)
- Natural areas located in public or regional open space, managed by the City of Wanneroo but not fully recognised as being managed for the purpose of conservation
- State Government freehold land not zoned Parks and Recreation under the Metropolitan Region Scheme.

The Perth Biodiversity Project, supported by the Western Australia Local Government Association, has identified and mapped regional ecological linkages within the Perth Metropolitan Region (PBP, 2007). The intent of these linkages is to provide connectivity across the landscape through protecting existing natural areas as stepping stones within broad bands (linkages) that connect the larger, more viable natural areas (Del Marco et al., 2004). A regional ecological linkage is mapped traversing the site as shown on Plate 5-8 (Emerge Associates, 2018).

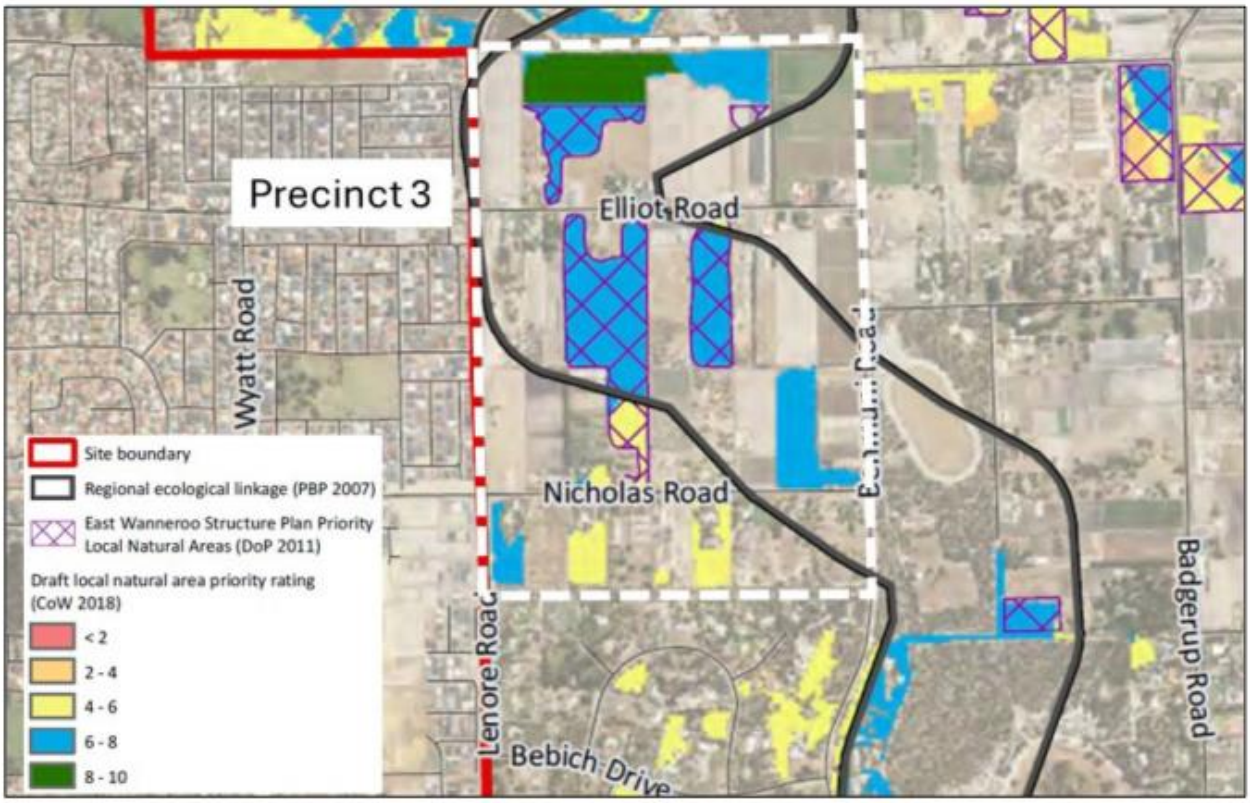

Plate 5-8: Local Natural Areas and Regional Ecological Linkages

Source: Emerge Associates, 2018

It is noted that since the Local Biodiversity Strategy (CoW, 2018) and Perth Biodiversity Project documents (PBP, 2007) were prepared, the DSP was progressed which provides refined 'Parkland' and 'Parkland (subject to confirmation)' areas where vegetation retention is proposed (Appendix 1).

The DSP also identifies a network of linear 'Parkland links' with the DSP proposing integration of ecological and movement functions within these links, in the form of linear parklands or landscape boulevards. The DSP outlines that the specific environmental features to be retained as part of 'Parkland links' will be confirmed at the future local structure planning stage (Emerge Associates, 2018). The EWDSP identifies 'Parkland Links' along the northern and eastern boundary of Precinct 3 (Appendix 1).

5.3 Potential Impact Identification and Assessment

Potential impacts to flora and vegetation associated with future urban development have been identified as follows:

- Direct loss of flora and vegetation through land clearing, including vegetation representative the Banksia WL SCP ecological community
- Increased presence of non-native flora species (i.e. weeds) through disturbance, edge effects, altered fire regimes or hydrological changes
- Altered hydrology impacting existing ecological conditions
- Potential spread of disease-causing organisms (e.g., *Phytophthora cinnamomi*)
- Fragmentation of vegetation.

Potential impacts and the associated design and management response are discussed further below.

5.3.1 Vegetation Retention and Clearing

Implementation of the LSP will result in impacts to native vegetation including clearing for lot creation and infrastructure installation.

The LSP has considered the siting and extent of the Parks and Recreation reserve within Precinct 3 in the context of impact minimisation to significant vegetation, particularly vegetation representative of the Banksia WL SCP ecological community (Figure 9). Vegetation retention may also be possible in other parts of the site i.e. road verges, drainage sumps etc., subject to detailed design.

The LSP proposes to retain 13.0 ha (39.5%) of native vegetation within Parks and Recreation reserve (Table 5-12), which comprises 5.8 ha of the EmmLW vegetation unit and 7.2 ha of the BaLOF vegetation unit. The portion of this vegetation which is representative of the Banksia WL SCP ecological community is 9.4 ha (52.2%).

Retention may also be possible in portions of the Public Open Space areas onsite. The extent of native vegetation in these areas is 3.1 ha (9.4%), with 0.6 ha (3.3%) representative of the Banksia WL SCP ecological community (Table 5-12).

Areas of retained vegetation in identified Parks and Recreation reserve will be subject to vegetation management, including weed control and targeted revegetation. The details of these works will be outlined within a Conservation Area Management Plan, or similar, proposed to be prepared at subdivision stage (Section 9).

The LSP proposes to clear between 16.8 ha (51.1%) to 19.9 ha (60.5%) of native vegetation within the site overall, demarcated by clearing the entirety of the Urban development area plus potential clearing within the Public Open Space (Table 5-12).

Table 5-12: Vegetation type within Parks and Recreation, Public Open Space and Urban Areas

Vegetation Type	Total Extent (ha)	Park and Recreation Area		Public Open Space Areas		Urban Area	
		Area (ha)	% of total	Area (ha)	% of total	Area (ha)	% of total
Native Vegetation							
EmmLW	13.0	5.8	44.6	0.4	3.1	6.8	52.3
BaLOF	19.9	7.2	36.2	2.7	13.6	10.0	50.3
Sub-Total	32.9	13.0	39.5	3.1	9.4	16.8	51.1
Not native vegetation/cleared							
Non-native /cleared	102.0	1.2	1.2	8.8	8.6	92.0	90.2
Precinct 3 Total	134.9	14.2	10.5	11.9	8.8	108.8	80.7
Banksia WL SCP ecological community							
Banksia WL	18.0	9.4	52.2	0.6	3.3	8.0	44.4

The identification of areas for vegetation retention has considered the locations of higher condition vegetation and looked to maximise retention of Very Good and Good condition vegetation, where possible. As can be seen from Table 5-13, a minimum of 47.3% of Very Good condition vegetation, and a minimum of 41.3% of Good condition vegetation is proposed for retention as part of the Parks and Recreation reserves. Additional vegetation retention may be possible in POS areas, subject to detailed design.

Table 5-13: Vegetation condition within Parks and Recreation, Public Open Space and Urban Areas

Vegetation Condition	Total Extent (ha)	Park and Recreation Area		Public Open Space Areas		Urban Area	
		Area (ha)	% of total	Area (ha)	% of total	Area (ha)	% of total
Very Good	11.0	5.2	47.3	1.5	13.6	4.3	39.1
Good	10.4	4.3	41.3	0.7	6.7	5.4	51.9
Degraded	9.1	3.3	36.3	0.8	8.8	5.0	54.9
Completely Degraded	2.4	0.3	12.5	0.1	4.2	2.0	83.3
Sub-total	32.9	13.1	39.8	3.1	9.4	16.7	50.8
Non-native/ cleared	102.0	1.2	1.2	8.8	8.6	92.0	90.2
Precinct 3 Total	134.9	14.3	10.6	11.9	8.8	108.7	80.6

The Priority 2 flora specimens found within Lot 43 Elliot Road will be retained within the Parks and Recreation zone proposed within the area (Figure 9). As such impacts to this P2 flora occurrence will be avoided.

The proposed vegetation retention extent differs slightly from the 'Parklands (subject to confirmation)' areas shown in the DSP, with the key difference being Parks and Recreation reserve not being proposed within Lot 42 Elliot Road and Lot 52 Nicholson Road. The balanced outcome proposed through the LSP design achieves retention of a minimum of 40% of the native vegetation present onsite, including a minimum of 52% of the Banksia WL SCP ecological community. The northern Parks and Recreation reserve connects to Benmuni Park, increasing the size of this protected vegetation patch. The eastern Parks and Recreation reserve will also provide a link to Nanovich Park to the east of the site.

5.3.2 Threatened Ecological Communities

5.3.2.1 Floristic Community Type SCP20a

Based on the potential presence of FCT SCP20a as identified in the DSP environmental reporting (Emerge Associates, 2018) the botanical surveys undertaken for the site included specific review of the potential presence of this FCT.

PATN analysis undertaken on plot data from both Detailed Flora and Vegetation surveys undertaken within the site, as assessed by 2 separate specialists, identified that the banksia vegetation onsite appears most likely to be representative of FCT SCP28 and not FCT SCP20a.

5.3.2.2 Banksia Woodlands of the Swan Coastal Plain Ecological Community

The mapped extent of Banksia WL SCP ecological community was similar between the spring 2022 survey (PGV Environmental, 2023; Plate 5-6) and the spring 2024 survey (Ecoscape, 2025; Figure 5). The key difference in mapping extent are noted as follows:

- Lot 40 Elliot Road – presence of Banksia WL TEC was identified as occurring in the 2022 survey , but not the 2024 survey. The reason for this not being included in the more recent 2024 survey is due to a decline in the vegetation condition, which resulted in the patch not meeting the relevant minimum size thresholds.
- Lots 29 and 30 Elliot Road – presence of Banksia WL TEC was identified in the 2022 survey, but the 2024 survey mapped a larger extent on these two sites. This reason for this is due to the extent of Good condition vegetation increasing , which resulted in the extent of the patch area increasing.

As noted above, the LSP design provides for a minimum of 9.4 ha (52%) of the vegetation representing the Banksia WL SCP ecological community present onsite. This vegetation will be retained within Parks and Recreation reserves, therefore providing greater protection than may occur within Public Open Space areas.

Based on the extent of clearing of Banksia WL SCP vegetation onsite, development proposals would be referred to the Commonwealth Department of Climate Change, Energy, the Environment and Water (DCCEEW) under the EBPC Act. The EPBC Act referral review and assessment process will allow for further assessment of impacts to Banksia WL SCP vegetation and for environmental offsets to be provide, where required.

5.3.3 Regional Context Analysis

At a regional level clearing of 19.9 ha (worst case clearing scenario based on vegetation retention in the Parks and Recreation reserves only) of native vegetation represents approximately 0.16% of the current extent of the Karrakatta Complex – central and south vegetation complex remaining on the Swan Coastal Plain. The proposed clearing will not reduce the extent of this vegetation complex below EPAs modified objective retain at least 10% of the preclearing extent within defined constrained areas including the Perth Metropolitan Region (EPA 2015).

The current extent of the Banksia Woodlands TEC is not known; however, it was estimated at the time of its listing under the EPBC Act in 2016 that approximately 336,490 ha was present, with 81,800 ha (24%) located within reserves (TSSC 2016; Ecoscape, 2025). The occurrence of approximately 18 ha of vegetation representing the Banksia WL SCP ecological community onsite would represent approximately 0.005% of the estimated 2016 occurrence and 0.02% of the extent within reserves.

In the context of the surrounding environment, it is noted that there is 1,526 ha of native vegetation present within 5 km of the site and 17,387 ha present within 15 km of the site. This includes the following nearby reserves and regional parks:

- Benmuni Park local reserve (part of Bush Forever Site 471) – immediately north of the site

- Jambanis Park/Nanovich Park/Estrel Park (part of Bush Forever Site 327) – immediately east of the site
- Badgerup Reserve (part of Bush Forever Site 327) – approximately 400m south east of the site
- Jandabup Nature Reserve (Bush Forever Site 324) – approximately 900m north east
- Yellagonga Regional Park, including Lake Joondalup Nature Reserve (Bush Forever Site 299) – approximately 2.4km west
- Lake Gnangara Park (Bush Forever Site 193) – approximately 2.8km south east of the site
- State Forest 65 (Gnangara-Moore River State Forest) – approximately 3km east
- Neerabup National Park (Bush Forever Site 383) – approximately 7.5km north west of the site

The vegetation present onsite is therefore not an isolated remnant, but rather a small portion of the existing local vegetation.

5.3.4 Additional Considerations

The Bushfire Management Plan prepared as part of the LSP technical documents identifies that appropriate bushfire protection can be achieved without the need to impact any proposed areas of vegetation retention or revegetation (see Section 8.1).

Stormwater infiltration is incorporated into a number of the open space areas which has the potential to result in clearing of vegetation. The proposed 15 mm biofiltration/1% AEP storage area locations are shown on Plate 5-9. Where possible, these areas have been located in cleared portions of the site. In locations where this has not been able to be achieved, the configuration of these areas at detailed design stage will aim to minimise impacts to higher quality vegetation patches.

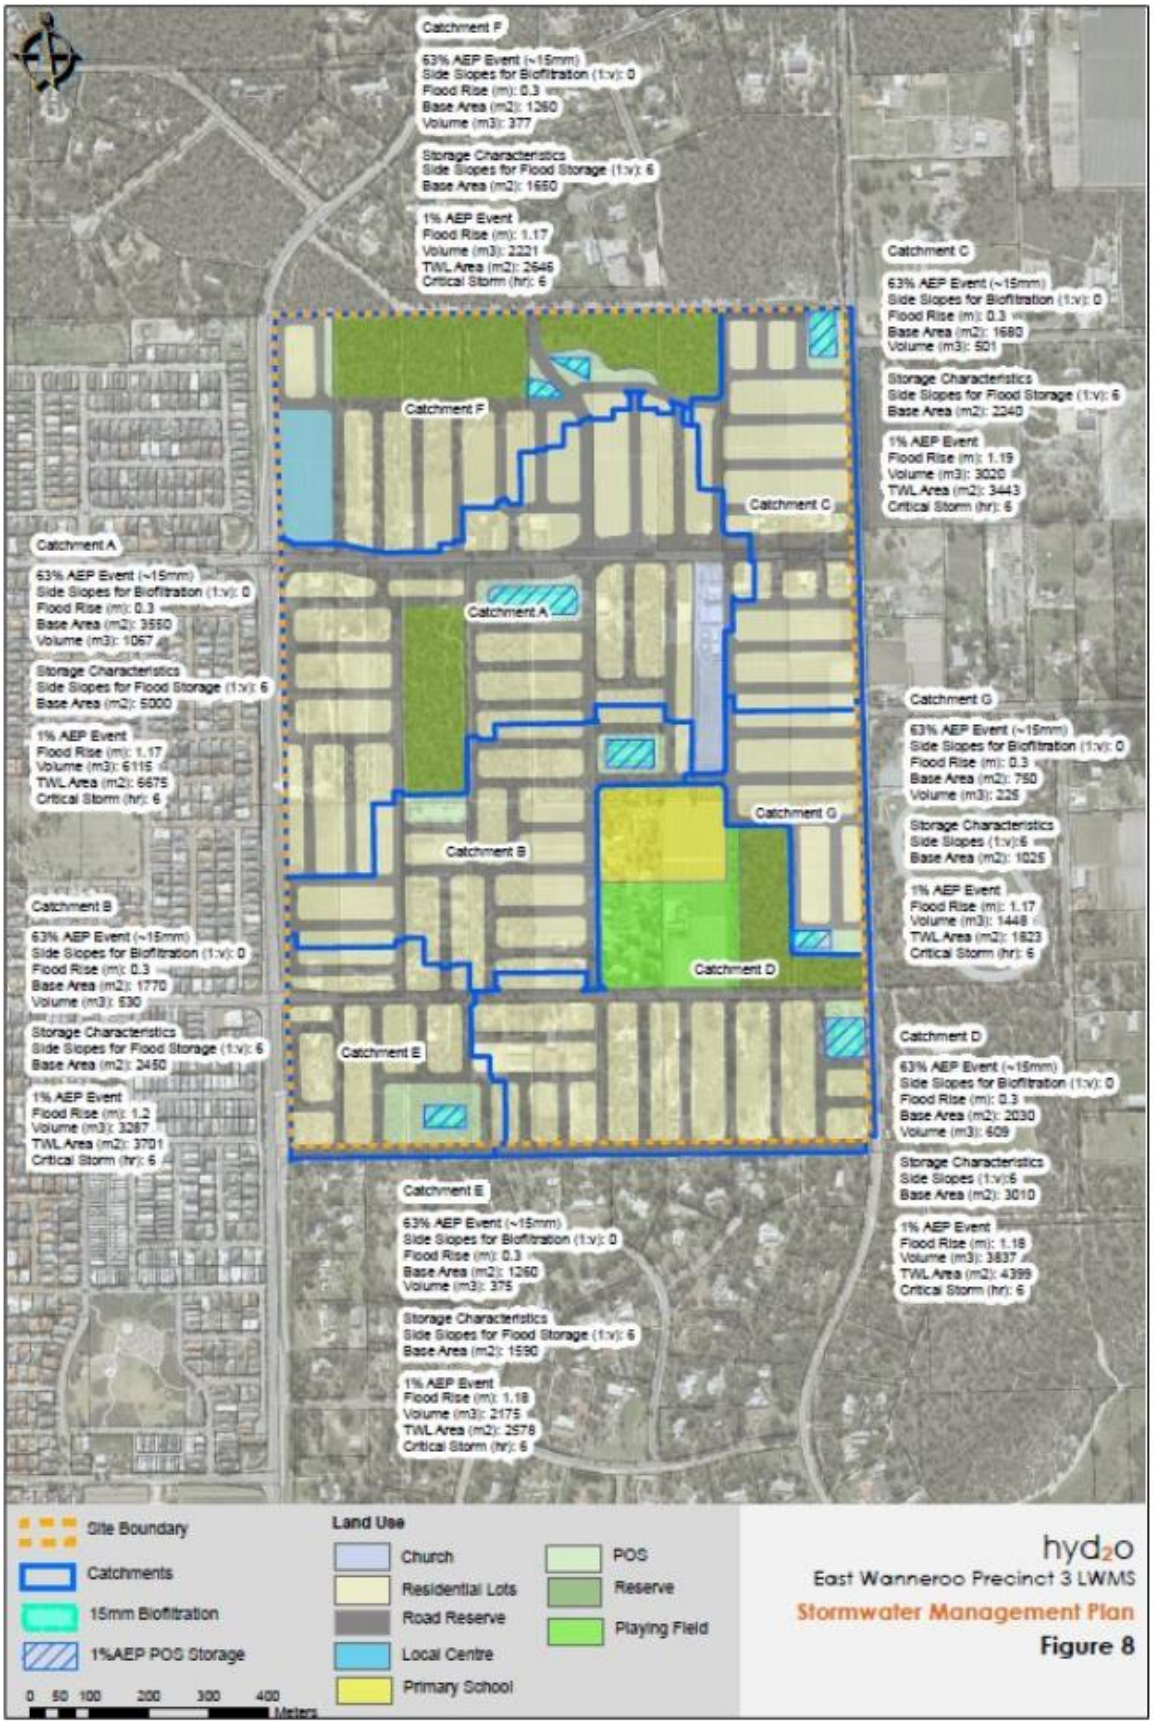

Plate 5-9: Indicative Stormwater Infiltration Areas

Source: Hyd2o, 2025

Further detail on the proposed stormwater drainage is provided within the Local Water Management Strategy (Hyd2o, 2025) with additional design detail to be presented within the future Urban Water Management Plans (UWMPs) prepared at subdivision stage.

Site hydrology considerations are discussed in Section 4. The key conclusions in relation to this matter and potential impact to vegetation within and surrounding the site are:

- The existing conductions which are conducive the infiltration through the sandy subsurface profile, together with a large separation distance to groundwater will remain
- Land use types, densities, and water quality treatment areas will be managed to considerably reduce nutrient application and output, and improve water quality relative to current conditions

If not appropriately managed, weeds can spread into and within areas of retained vegetation onsite and adjacent to the development. Weed spread can be facilitated by inappropriate access into native vegetation, dumping of waste such as organic matter into areas of native vegetation, weed ingress from private properties, weed movement in drainage infrastructure and soil disturbance allowing the growth/colonisation of weed species in the disturbed area. Interface management and weed control can be an effective tool to minimise weed spread.

The presence of Declared Weed species onsite, particularly **Opuntia stricta* (Common Prickly Pear), will require management. Recommended control actions as advised by DBCA (2025) for these species include (Table 5-14):

Table 5-14: Declared Weed Management

Species	Suggested Method of Control	Timing
*Opuntia stricta	Spray 0.2 g metsulfuron methyl + Pulse® in 15 L water (or 2.5 - 5g /ha + Pulse®). Best results achieved when flowering.	Flowing occurs during August and September
*Asparagus asparagoides	Spray 0.2 g metsulfuron methyl + Pulse® in 15 L water (or 2.5 - 5g /ha + Pulse®). Best results achieved when flowering.	Floring occurs during August and September

Source: DBCA, 2025

The observed locations of **Opuntia stricta* and **Asparagus asparagoides* are in proximity to areas of future Parks and Recreation reserve retained vegetation as well as potential POS vegetation retention areas. The current owners of these lots will be advised of the presence of this species onsite and the need for control to be undertaken. Once ownership of these lots transfers to property developers, additional searches for the presence of these species will be undertaken and control undertaken, as required.

The potential presence of these weeds onsite will be noted in the proposed Conservation Area Management Plan(s) and/or Construction Environmental Management Plan(s), to ensure ongoing review for potential presence and control, if found onsite, is undertaken.

5.4 Impact Mitigation

The proposed development will manage impacts to flora and vegetation in accordance with the mitigation hierarchy (Table 5-15).

Table 5-15: Flora and Vegetation Mitigation Hierarchy

Mitigation Hierarchy	Assessment and Proposed Actions
Potential Impact	
Flora and Vegetation	• Clearing of between 16.8 ha (51.1%) to 19.9 ha (60.5%) of the native vegetation present within the LSP area. This includes clearing of between: ▪ 6.8 ha (52.3%) to 7.2 ha (55.4%) of the EmmLW vegetation unit ▪ 10.0 ha (50.3%) to 12.7 ha (63.9%) of the BaLOF vegetation unit ▪ 4.3 ha (39.1%) to 5.8 ha (52.7%) of vegetation in Very Good condition ▪ 5.4 ha (51.9%) to 6.1 ha (58.6%) of vegetation in Good condition • Clearing of between 8.0 ha (44.4% and 8.6 ha (47.7%) of vegetation representing Banksia WL SCP ecological community. • Potential for increased weed invasion • Potential for altered hydrology to impact existing ecological conditions and associated vegetation health • Potential for spread of disease causing organisms • Potential for fragmentation of vegetation
Mitigation Hierarchy	
Avoidance	• Identification of key vegetation retention areas as Parks and Recreation reserve to afford greater protection to the retained vegetation. • The LSP has been designed to avoid vegetation disturbance within the Parks and Recreation Areas proposed onsite. This allows for retention of 13 ha (29.5%) of the native vegetation onsite comprising: ▪ 5.8 ha (44.6%) vegetation from the EmmLW vegetation unit ▪ 7.2 ha (36.2%) of vegetation from the BaLOF vegetation unit ▪ 9.4 ha (52.2%) of vegetation representing the Banksia WL SCP ecological community ▪ 5.2 ha (47.3%) vegetation in Very Good condition ▪ 4.3 ha (41.3%) vegetation in Good condition • Retention of the Priority 2 flora occurrence within proposed Parks and Recreation reserve located within Lot 43 Elliot Road. • Bushfire risk management can be undertaken without impact to areas of retained vegetation • Vegetation retention in general Public Open Space areas and within road reserve will be undertaken where possible. • Avoidance of spread of Declared Weed species through targeted removal and management
Minimisation	• Approximately 3.1ha (9.4%) of native vegetation is located within Public Open Space areas, separate to the Parks and Recreation reserves. Vegetation retention in these areas will be maximised, where possible. • Clearing boundaries will be clearly demarcated on the ground to avoid unauthorised clearing to protect the retained vegetation. • Areas of native vegetation are separated from development areas by a road interface to provide a hard edge which will assist with environmental management, including minimisation of weed spread. • Undertake weed control along the boundary of the Parks and Recreation reserve and Urban Development Areas, to avoid ingress into areas of retained vegetation. These

Mitigation Hierarchy	Assessment and Proposed Actions
	management measures will be detailed in the Conservation Area Management Plan, or similar. • Vegetation and Fauna Management Plan(s), or similar will be prepared in accordance with the City of Wanneroo Environmental Management Plan Guidelines and LPP 3.3 to ensure best practice management is undertaken during clearing and subdivision works, prevent damage to vegetation retention areas and appropriately trap and relocate fauna prior to and during clearing. • Conservation Area Management Plan(s), or similar, will be prepared in accordance with the City of Wanneroo Environmental Management Plan Guidelines for areas of retained vegetation onsite. These plans will provide guidance relating to vegetation retention, revegetation zones, revegetation species and density, weed and disease control, drainage and nutrient management, access control, signage and bushfire prevention/risk management. • Construction Environmental Management Plan(s) will be prepared for the site. This will contain, amongst other items, hygiene protocols to prevent the spread of disease or weeds to retained and adjoining native vegetation areas.
Revegetation	• Native vegetation retained onsite will be subject to management and revegetation including weed control and targeted revegetation planting, where appropriate, to improve the condition and ecological value of these areas. The details of the weed control and revegetation works will be outlined within Conservation Area Management Plan(s), or similar.
Offsets	• Future development proposals proposing to clear Banksia WL SCP vegetation will require referral under the Commonwealth EBPC Act. The EPBC Act referral and assessment process will require further evaluation of impacts to Banksia WL SCP vegetation and for environmental offsets to be provided, where required.

5.5 Predicted Outcome

The predicated outcomes for flora and vegetation include:

- Retention of a minimum of 13.0 ha (39.5%) of native vegetation onsite, including 9.4 ha (52.2%) of vegetation representative of the Banksia WL SCP ecological community.
- Key areas of vegetation retention are to be located within Parks and Recreation reserves, which will provide additional security of tenure.
- Loss of up to 19.9 ha (60.5%) of native vegetation onsite, including 8.6 ha (47.7%) of vegetation representative of the Banksia WL SCP ecological community.
- Retention of all Priority 2 flora occurrences present onsite.
- Improvement in condition of the retained vegetation areas onsite through implementation of weed control and revegetation actions which will be detailed in the proposed Conservation Area Management Plan(s).
- Environmental offsets for clearing of vegetation representative of the Banksia WL SCP ecological community to be addressed through the DCCEEW EPBC Act referral and assessment process.

6 Terrestrial Fauna

6.1 Key Policies and Guidance

Relevant policy and guidance documents for terrestrial fauna, which have informed site-specific investigations and/or have been used to assess potential impacts, include:

- Environmental Factor Guideline – Terrestrial Fauna (EPA, 2016c)
- Technical Guidance – Sampling Methods for Terrestrial Vertebrate Fauna (EPA, 2016d)
- Technical Guidance – Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment (EPA, 2020)
- Referral Guideline for 3 WA threatened black cockatoo species: Carnaby's Cockatoo *(Zanda latirostris*), Baudin's Cockatoo (*Zanda baudinii*) and the Forest Red-tailed Black-cockatoo (*Calyptorhynchus banksii naso*) (DAWE, 2022).
- City of Wanneroo local planning policies including:
  - Local Planning Policy 1.1 - Conservation Reserves
  - Local Planning Policy 4.8 - Tree Preservation Policy
  - Local Planning Policy 5.3 - East Wanneroo
  - City of Wanneroo- Local Biodiversity Plan 2018/19-2023/24 (CoW, 2018)

6.2 Receiving Environment

6.2.1 Fauna surveys

Fauna surveys extending over the site include:

- Fauna Survey and Black Cockatoo Assessment with field work undertaken during spring 2022 by PGV Environmental (2023), including targeted sites over eight lots within Precinct 3 (Lots 3, 11, 29, 30, 40, 42 and 43 Elliott Road and Lot 62 Nicholas Road, Wanneroo) (Plate 5-2) (Appendix 3)
- Fauna Survey and Black Cockatoo Assessment with field work undertaken during February 2025 by Ecoscape for the entire Precinct 3 area (Ecoscape, 2025) (Appendix 4)

6.2.1.1 Fauna Survey and Black Cockatoo Habitat Assessment (2022)

6.2.1.1.1 Fauna Survey

This basic fauna survey was done in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). It involved a desktop review and field survey involving a site walkover to record and assess fauna habitats. The field work was undertaken on 26 and 30 September 2022. Landholdings which formed part of this survey are highlighted on Plate 6-1.

6.2.1.1.2 Black Cockatoo Habitat Assessment

The Black Cockatoo habitat assessment was done in accordance with *Referral guideline for 3 WA threatened black cockatoo species Carnaby's Cockatoo (Zanda latirostris), Baudin's Cockatoo (Zanda baudinii) and the Forest Red-tailed Black-cockatoo (Calyptorhynchus banksii naso)* (DAWE, 2022) (Black Cockatoo Referral Guidelines) and the methodology that is outlined in the SPRAT Database for each of the Black Cockatoo species for Black Cockatoo Habitat Assessments.

The assessment involved (PGV Environmental, 2023):

- traversing the site on foot and assessing information on Black Cockatoo foraging, roosting and breeding habitat
- investigating the extent, type and quality of the vegetation present, which included the presence and extent of plants known to be used by Black Cockatoos.

6.2.1.2 Fauna Survey and Black Cockatoo Habitat Assessment (2025)

6.2.1.2.1 Fauna Survey

This basic fauna survey was done in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). The survey was conducted on 3, 10 and 12 February 2025, and involved (Ecoscape 2025):

- Desktop analysis
- Field work which incorporated a number of survey techniques, including habitat assessment, active searches, raking of spoil heaps and leaf litter, searches for secondary evidence such as scats and tracks, as well as opportunistic searches
- Targeted searches for conservation listed fauna identified during desktop analysis
- Bird surveys conducted as 20-minute point searches by an experienced ornithologist during peak periods of bird activity (early morning, as per Birdlife Australia standard methodology)
- Assessment and mapping of fauna habitats.

6.2.1.2.2 Black Cockatoo Habitat Assessment

Potential and active (actual) Black Cockatoo breeding trees were assessed by Ecoscape on 3, 10 and 12 February 2025 as per *Black Cockatoo Referral Guidelines* (DAWE, 2022), Bamford Consulting Ecologist (BCE) (2016) tree classification methods, and BCE (2020) habitat value scoring method.

The suitability of the survey area for breeding (additional to the specific tree survey), roosting and foraging was also assessed and mapped.

6.2.2 Fauna habitats

6.2.2.1 Fauna Survey (2022)

Within the lots that were surveyed, PGV Environmental (2023) recorded two fauna habitat types, described as Open Woodland Habitat and Cleared/Developed Habitat (Appendix 3).

6.2.2.2 Fauna Survey (2025)

One fauna habitat type, Banksia Woodland, was recorded within survey area from six habitat assessment points and covers 32.09 ha (24.40%) (Figure 7); however, due to the remaining areas of rural/rural residential land (including market gardens) lacking vegetative structure and frequent disturbance from human activity these were not considered as habitat (Ecoscape, 2023). The remaining area mapped as cleared/not native vegetation covers 101.95 ha (75.6%) (Figure 7).

The Banksia Woodland fauna habitat is described as open woodland dominated by Banksia species with *Allocasuarina fraseriana* (Sheoak), emergent *Eucalyptus marginata* subsp. *marginata* (Jarrah), and occasional *Eucalyptus gomphocephala* (Tuart) over mid-level shrubs with low grass trees on a grey sandy plain. This habitat provides suitable shelter and foraging resources for a common assemblage of vertebrate fauna species, reptiles and bush birds. It provides foraging resources for the conservation-listed Carnaby's and Forest Red-tailed Black Cockatoos and Quenda.

6.2.3 Fauna Assemblage

6.2.3.1 Fauna Survey (2025)

Ecoscape (2025) recorded 33 vertebrate fauna species during the survey, from two ornithological surveys and opportunistic observations, consisting of:

- mammals, of which two are introduced
- 29 birds, of which 4 are introduced
- 2 reptiles.

Ornithological survey sites and locations of conservation-listed fauna, including evidence of presence including foraging observations, are shown on Figure 7.

6.2.4 Conservation Significant Fauna

6.2.4.1 Fauna Survey (2022)

PGV Environmental (2023) identified the areas surveyed may provide habitat for two marine bird species, Cattle Egret (*Ardea* (*Bubulcus*) *ibis*) and the Rainbow Bee-eater (*Merops ornatus*), the Spiny Katydid (Swan Coastal Plain) (*Austrosagaspinifer*) (Priority 2) and the Woolybush Bee (*Hylaeus globuliferus*) (Priority 3). The Quenda (*Isoodon fusciventer*) (Priority 4) could potentially occur on the site.

Habitat on the site was identified for three listed species of Black Cockatoos being:

- Carnaby's cockatoo
- Forest Red-tailed Black Cockatoo
- Baudin's cockatoo

It is worth noting that PGV Environmental (2023) stated that the site is just outside the modelled 'Predicted Breeding Area' distribution for Baudin's Black Cockatoo.

6.2.4.2 Fauna Survey (2025)

Ecoscape (2025) identified survey area may provide habitat for the Peregrine falcon (*Falco peregrinus*), and Black-striped snake (*Neelaps calonotos*) (Priority 3). Further, the Quenda (Priority 4) is known to occur within the survey area along with Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo.

It is worth noting that Ecoscape (2025) determined Baudin's cockatoo as being unlikely to occur within the survey area, given it is located outside of their mapped distribution (DAWE 2020).

6.2.4.2.1 Quenda (Priority 4)

The Banksia Woodland habitat contains low shrubs, grass trees and grassy understorey that are used by Quenda for shelter along with the presence of sandy soils for foraging (Ecoscape, 2025). Whilst no live individual were observed during Ecoscape's (2025) survey, evidence of Quenda was found in the form of diggings and apparent tunnelling in long grass. The Quenda diggings ranged in age which suggests persistence in the survey area over time.

6.2.5 Black Cockatoo Habitat

6.2.5.1 Black Cockatoo Habitat Assessment (2022)

6.2.5.1.1 Potential Breeding Habitat

Within the lots that were surveyed by PGV Environmental (2023), a total of 16 Jarrah trees were recorded that had a DBH of greater than 500mm, however one tree had a large base but was sheared and coppiced

and would not form a suitable hollow so a total of fifteen trees on the site meet the definition of potential breeding habitat (Plate 6-1). None of the trees had suitable hollows for breeding (PGV Environmental, 2023).

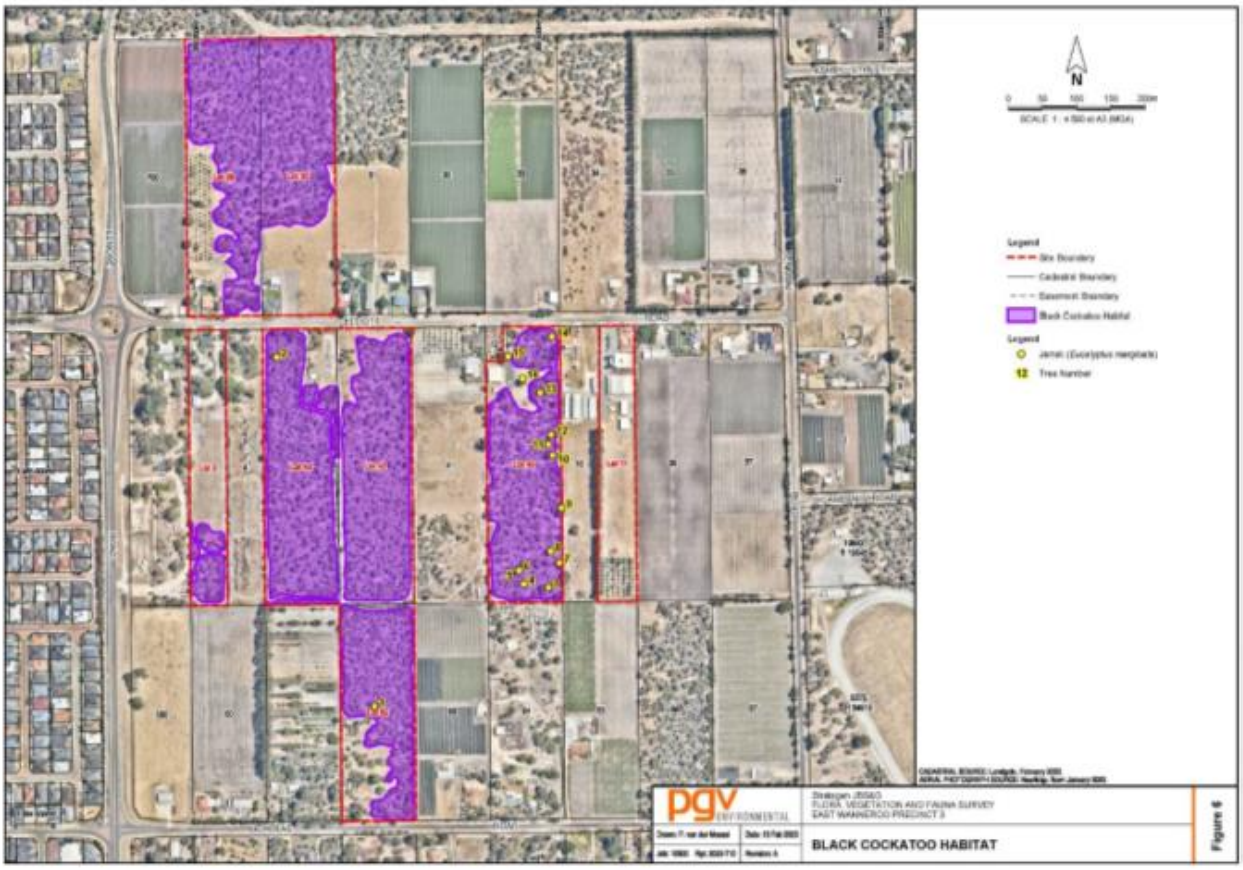

Plate 6-1: Black Cockatoo Habitat – 2022 survey findings

6.2.5.1.2 Roosting Habitat

PGV Environmental (2023) did not record any roosting within the survey area and determined the survey area had limited roosting habitat for Black Cockatoos. Further, roosting has not been recorded within the survey area (DoP, 2011; Peck *et al.,* 2019; National Map, 2022, as cited in PGV Environmental, 2023). The nearest roosting sites are reported to be from around 700 m to the north-east (National Map, 2022), and a number of roost sites are reported within 20km (PGV Environmental, 2023).

6.2.5.1.3 Foraging Habitat

PGV Environmental (2023) recorded thirteen species that are recognised as foraging habitat for Black Cockatoos within the survey area (Table 6-1).

Table 6-1: Forage species for Black Cockatoos

Tree Species	Common Name	Carnaby's Cockatoo	Forest Red-tailed Black Cockatoo	Baudin's Cockatoo
Acacia saligna	Orange Wattle	✓		
Allocasuarina fraseriana	Sheoak		✓	✓
Banksia attenuata	Candlestick Banksia	✓		
Banksia dallanneyi	Couch Honeypot	✓		
Banksia menziesii	Firewood Banksia	✓		

Tree Species	Common Name	Carnaby's Cockatoo	Forest Red-tailed Black Cockatoo	Baudin's Cockatoo
Bankia prionotes	Acorn Banksia	✓		
Banksia sessilis	Parrot Bush	✓		✓
Callitris preissii	Rottnest Island Pine	✓		
Eucalyptus marginata	Jarrah	✓	✓	✓
Hakea prostrata	Harsh Hakea	✓		✓
Hakea ruscifolia	Candle Hakea	✓		✓
Melia azedarach	Cape Lilac	✓	✓	
Xanthorrhoea preissii	Balga	✓	✓	

Source: (Davies, 1966; Saunders, 1980; Johnstone and Storr, 1998; Johnstone and Kirkby, 1999; Valentine and Stock,2008; Groom, 2011; Johnstone et al., 2011; SEWPaC, 2012; Bamford, 2013; Johnstone, et al., 2013; Johnstone et al., 2016 as cited in PGV Environmental, 2023)

The Black Cockatoo foraging habitat values was determined by PGV Environmental (2023) using the habitat scoring tool in the Commonwealth Black Cockatoo referral guideline (DAWE, 2022).

Table 6-2: Foraging habitat scoring tool (DAWE, 2022)

Attribute	Context Adjustor	Carnaby's Cockatoo	Forest Red-tailed Black Cockatoo	Baudin's Cockatoo
Starting score:		**10**	**10**	**10**
Foraging potential	**Subtract 2** from your score if there is no evidence of feeding debris on your site.	0	0	-2
Connectivity	**Subtract 2** from your score if you have evidence to conclude that there is no other foraging habitat within 12 km of your site.	0	0	0
Proximity to breeding	**Subtract 2** if you have evidence to conclude that your site is more than 12 km from breeding habitat.	0	0	0
Proximity to roosting	**Subtract 1** if you have evidence to conclude that your site is more than 20 km from a known night roosting habitat.	0	0	0
Impact from significant plant disease	**Subtract 1** if your site has disease present (e.g. Phytophthora spp. or Marri canker) and the disease is affecting more than 50% of the preferred food plants present.	0	0	0
Final Score		10	10	8

6.2.5.2 Black Cockatoo Habitat Assessment (2025)

6.2.5.2.1 Potential Breeding Habitat

Ecoscape (2025) assessed potential breeding habitat in accordance with the criteria outlined in the Commonwealth Black Cockatoo referral guideline (DAWE, 2022), with additional information recorded using the grading classifications outlined by BCE (2016) when determining the potential suitability of trees to be used for nesting based on the presence, size and orientation of hollows.

A total of 95 trees were recorded to have suitable diameters (>500 mm) to be Black Cockatoo habitat trees, of which 84 were Jarah (Eucalyptus marginata), 5 were Tuart (*Eucalyptus gomphocephala*), 7 were dead and

2 were other (Figure 8) (Ecoscape, 2025). Photographs of all trees are provided in Appendix 9 of Ecoscape's (2025) report (Appendix 4).

Based on BCE's grading classifications, no trees were identified within the site as Class 1 (trees having hollows with active nests) or Class 2 (trees having hollows showing previous use as a Black Cockatoo nest but not currently occupied). One Jarrah was recorded within the eastern extent of Lot 40 as being Class 3 (trees having potentially suitable hollows without evidence of use) (Figure 8) (Ecoscape, 2025).

Class 4 and 5 trees do not have hollows suitable for Black Cockatoos but are of sufficient size that they may develop them in the future. 30 trees were classified as Class 4 (trees with large hollows that weren't suitable for Black Cockatoos) and 64 as Class 5 (trees currently without large hollows) (Figure 8) (Ecoscape, 2025).

6.2.5.3 Roosting Habitat

No known roost locations are registered within the site (Ecoscape, 2025). The closest recorded roost is approximately 530 m east of the site, which was last documented as being used in 2022 during the Great Cocky Count (Pryor, Barrett and Williams, 2023 as cited in Ecoscape 2025).

Whilst Ecoscape (2025) did note that the Banksia Woodland habitat type, which is mapped across the site, includes emergent Eucalyptus species that is mostly Jarrah with occasional Tuart that have potential as roosting habitat, no evidence of roosting was found during the survey. Ecoscape (2025) did observe one pair and one single Carnaby's Cockatoo perching in the site.

6.2.5.4 Foraging Habitat

The foraging habitat within the site is comprised of mixed Banksia species (*Banksia attenuata*, *Banksia prionotes*, *Banksia menziesii*) utilised by Carnaby's, *Allocasuarina fraseriana* utilised by Forest Red-tailed Black Cockatoos and *Eucalyptus marginata* subsp. marginata (Jarrah) utilised by both Black Cockatoo species (Ecoscape, 2025).

Ecoscape (2025) found evidence of previous foraging in the form of chewed Banksia cones. Two Forest Red-tailed Black Cockatoos were observed foraging in *Allocasuarina* trees. Based on field observations and detailed flora quadrat data, it was estimated that the Black Cockatoo foraging species ranged from approximately 20-40% coverage (Ecoscape, 2025).

The total extent of suitable foraging habitat within the site is 32.90 ha. To determine the habitat quality scores for Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo, Ecoscape (2025) utilised the DAWE (2022) foraging habitat scoring tool (Table 6-3).

Table 6-3: Foraging habitat scoring tool (DAWE, 2022)

Habitat Summary for Black Cockatoo Foraging Habitat		Score
Carnaby's Cockatoo		
Starting Score	10 if the site is >1 ha in extent, is within the usual range of the species, and is: • native shrubland, kwongan heathland or woodland dominated by proteaceous species • native woodland or forest containing foraging species, including roadsides, parkland cleared areas and planted native vegetation.	+10
Context adjustor (subtractions)	None applicable.	0
Final Score		**10 (High Quality)**
Forest Red-tailed Black Cockatoo		
Starting Score	10 if the site is >1 ha in extent, is within the usual range of the species, and is: • Jarrah or Marri woodland and/or forest • on the edge of Karri forest • Wandoo and Blackbutt occur on the site • includes the above if along roadsides and parkland cleared areas.	+10
Context adjustor (subtractions)	No known breeding areas are within 12 km of the survey area	-2
Final Score		**8 (High Quality)**

Source: Ecoscape (2025)

Ecoscape (2025) also applied the BCE (2020) scoring system, which takes into consideration the following components:

- site condition (vegetation composition, condition and structure)
- site context (the site in relation to other native vegetation within a 15 km radius of the site)
- species density (stocking rate: frequency and abundance of Black Cockatoos at the site)
- modification, if needed, for vegetation with little or no foraging value and for pine plantations that provide valuable food sources.

Table 6-4 presents the foraging values calculated for Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo using BCE (2020) scoring system.

Table 6-4: Black cockatoo foraging value (BCE, 2020)

Component	Carnaby's Cockatoo	Forest Red-tailed Black Cockatoo
Site condition	**4**: 20-40% *Banksia*	**3**: 5-20% foraging
Site context	**3**: in vicinity of known breeding area, >5% native habitat in 15 km radius	**2**: Breeding site unlikely, 5-10% native habitat within 15 km radius
Species density/ stocking rate	**1**: foraging evidence	**1**: sightings, foraging
Total Score	8	6

Source: Ecoscape (2025)

The areas mapped as Banksia Woodland within the site (Figure 7 and Figure 8), scored an 8 out of a possible 10 for Carnaby's Cockatoo (which represents potentially high value foraging habitat), and 6 out of a possible 10 for Forest Red-tailed Black Cockatoo (which represents potentially moderate value foraging habitat).

It is worth noting, the BCE scoring tool is considered to be a more accurate depiction of the foraging habitat value and it's predicted distribution across the site. One of the primary aims of the DAWE (2022) foraging quality scoring tool is to assist proponents with determining whether or not a proposed action requires referral to DCCEEW. Given the 2022 black cockatoo referral guidelines also acknowledges that the scoring tool does not include or require consideration of vegetation quality (i.e Keighery condition scale or other similar methodologies) and that this kind of information may become important when environmental assessment of the proposed action is required, the BCE scoring tool was considered to be more a more appropriate scoring tool to be utilised for the environmental impact assessment of foraging habitat within the site.

6.2.6 Introduced Fauna

The following introduced vertebrate fauna were identified as occurring on site from observations and secondary evidence (Ecoscape, 2025):

- Rainbow Lorikeet (*Trichoglossus moluccanus*); one record, observed at BS01
- Rabbit (*Oryctolagus cuniculus*); one record of deceased remains
- Red Fox (*Vulpes vulpes*); two records of a burrow and deceased remains
- Laughing Kookaburra (*Dacelo novaeguineae*); one record, observed opportunistically
- Laughing Turtle-dove (*Spilopelia senegalensis*); two records, observed at BS01 and BS04
- Spotted Turtle-dove (*Spilopelia chinensis*) one record, observed opportunistically.

In addition to the Red Fox and Rabbit identified above, PGV Environmental (2023) also identified the Feral cat (*Felis catus*), House Mouse (*Mus musculus*) and Black Rat (*Rattus rattus*) as being likely to occur within the site.

6.3 Potential Impact Identification and Assessment

Potential impacts to terrestrial fauna associated with future urban development have been identified as follows:

- Direct loss of habitat through land clearing
- Mortality or displacement of individuals or populations
- Degradation and fragmentation of habitat
- Increased presence of invasive species (i.e., fauna, weeds and diseases)
- Increased frequency of fires.

Implementation of the LSP will result in impacts to some areas of native vegetation which may provide fauna habitat opportunities. The location of Parks and Recreation reserves and public open space areas are shown in Appendix 2.

The proposed development will manage impacts to fauna and fauna habitat in accordance with the mitigation hierarchy (Section 5.4.1).

6.3.1 Black Cockatoo Habitat Retention and Clearing

Implementation of the proposal will result in impacts to some areas of native vegetation which may provide fauna habitat opportunities for lot creation and infrastructure installation.

As previously stated, the development has considered the siting and extent of the Parks and Recreation reserve within Precinct 3 in the context of impact minimisation to Black Cockatoo foraging habitat and habitat trees (Figure 9). Tree retention may also be possible in other parts of the site i.e. road verges, public open space, drainage sumps etc., subject to detailed design.

Approximately 13 ha (39.51%) of Black Cockatoo foraging habitat, which is of moderate value for Forest Red-tailed Black Cockatoos and high value for Carnaby's Black Cockatoo, is proposed for retention in the Parks and Recreation reserve (Table 6-5). Approximately 19.90 ha (60.49%) is proposed to be cleared for development within the Urban Development and Public Open Space areas (Table 6-5).

Table 6-5: Black Cockatoo foraging habitat values within Parks and Recreation, Public Open Space and Urban Development

	Black Cockatoo Foraging Habitat		Cleared/ Not native vegetation	
	Area (ha)	% of Value	Area (ha)	% of Value
Parks and Recreation	13.00	39.51%	1.25	1.22%
Public Open Space	3.15	9.58%	8.82	8.66%
Urban Development	16.75	50.91%	91.88	90.12%
Total	**32.90**	**100.00%**	**101.95**	**100.00%**

A total of 38 Black Cockatoo habitat trees are proposed for retention in the Parks and Recreation reserve (Table 6-6). Of these, 35 are Jarrah and 3 are dead. There are 8 trees within Public Open Space (7 are Jarrah and 1 is Tuart) and 49 within the proposed Urban Development (39 are Jarrah, 4 are Tuart, 4 are dead and 2 are other). As previously stated, tree retention may also be possible in other parts of the site i.e. road verges, public open space, drainage sumps etc., subject to detailed design.

Table 6-6: Black cockatoo habitat trees within Parks and Recreation, Public Open Space and Urban Development

	Jarrah	Tuart	Dead	Other	Total
Parks and Recreation	35	0	3	0	38
Public Open Space	7	1	0	0	8
Urban Development Area	39	4	4	2	49
Total	81	5	7	2	95

Within the Parks and Recreation reserve, there are 27 Black Cockatoo habitat trees classified as Class 5 (trees currently without large hollows) and 11 as Class 4 (trees with large hollows that are not suitable for Black Cockatoos (Table 6-7). Within public open space there are 4 categorised as Class 5 and another 4 as Class 4. The Urban Development area contains 33 as Class 5, and 15 as Class 4. There is only one Class 3 tree (has potentially suitable hollows without evidence of use) which is located in the Urban Development area; however, based on the location of the tree (Figure 9) there may be potential to retain it within the road reserve as part of future development.

Table 6-7: Black cockatoo tree classes within Parks and Recreation, Public Open Space and Urban Development

	Tree classification			
	Class 5 (without large hollows)	Class 4 (not suitable hollows)	Class 3 (potentially suitable hollows, no evidence of us)	Total
Parks and Recreation	27	11	0	38
Public Open Space	4	4	0	8
Urban Development Area	33	15	1	49
Total	64	30	1	95

6.3.2 Regional Context Analysis

Utilising DBCA mapping, PGV Environmental (2023) determined there is 17,973 ha of Black Cockatoo habitat within 12 km of the site, of which 3,635 ha is in DBCA managed land (PGV Environmental, 2023). This would include the following nearby reserves and regional parks:

- Benmuni Park local reserve (part of Bush Forever Site 471) – immediately north of the site
- Jambanis Park/Nanovich Park/Estrel Park (part of Bush Forever Site 327) – immediately east of the site
- Badgerup Reserve (part of Bush Forever Site 327) – approximately 400m south east of the site
- Jandabup Nature Reserve (Bush Forever Site 324) – approximately 900m north east
- Yellagonga Regional Park, including Lake Joondalup Nature Reserve (Bush Forever Site 299) – approximately 2.4km west
- Lake Gnangara Park (Bush Forever Site 193) – approximately 2.8km south east of the site
- State Forest 65 (Gnangara-Moore River State Forest) – approximately 3km east
- Neerabup National Park (Bush Forever Site 383) – approximately 7.5km north west of the site

At a regional level, clearing of 19.9 ha of native vegetation (worst case clearing scenario based on vegetation retention in the Parks and Recreation reserves only) represents approximately 0.11% of Black Cockatoo foraging habitat within 12 km of the site.

6.3.3 Impact Mitigation

Impacts to fauna and fauna habitat have been considered in the context of the EPA's mitigation hierarchy (Table 5-8).

Table 6-8: Terrestrial Fauna Mitigation Hierarchy

Mitigation Hierarchy	Assessment and Proposed Actions
Impact	

Terrestrial Fauna	• Loss of potential fauna habitat vegetation in Urban Development Area.
	• Loss of approximately 19.90 ha of Banksia Woodland fauna habitat within Public Open Space and Urban Development Area, which comprise of:
	  ▪ 19.90 ha of high value Carnaby's Cockatoo foraging habitat and moderate quality Forest Red-tailed Black Cockatoo foraging habitat
	  ▪ 57 Black cockatoo habitat trees, of which
	• Fragmentation of habitat.

Mitigation Hierarchy	Assessment and Proposed Actions
	• Potential for degradation of habitat including increased presence of invasive species. • Potential increased frequency of fires leading to habitat changes. • Potential mortality or displacement of individuals or populations.
Mitigation Hierarchy	
Avoidance	• Retention of 13 ha of potential Banksia Woodland fauna habitat within Parks and Recreation reserve, which comprise of: ▪ 13 ha of high value Carnaby's Cockatoo foraging habitat and moderate quality Forest Red-tailed Black Cockatoo foraging habitat. ▪ 38 Black Cockatoo habitat trees, including 1 Class 3 tree (has potentially suitable hollows without evidence of use). • Potential retention of Black Cockatoo habitat trees and potential roosting trees within public open space, road reserves and/or detention basins could provide future habitat for Black Cockatoos. • Bushfire management can be undertaken without impact to areas of retained vegetation or revegetation (see Bushfire Management Plan).
Minimisation	• Tree retention in road reserves, public open space and/or drainage basins may be considered once detailed engineering and planning design has been undertaken. This will be done in accordance with City of Wanneroo's LPP 4.8 – Tree Preservation. • Street tree planting will include native species, with potential foraging Black Cockatoo foraging value, which will be approved by the City of Wanneroo. • Landscape planting within the Parks and Recreation reserve will include areas of native species planting that are acceptable from a bushfire management perspective. Detailed landscape design will be prepared at the subdivision stage of the project to be approved by the City of Wanneroo. • Clearing boundaries will be physically/visibly demarcated to avoid unauthorised clearing to protect the retained vegetation which provides fauna habitat opportunities. • Fauna relocation and management will be undertaken prior to- and during construction to avoid impacts to fauna. In accordance with the City of Wanneroo's Environmental Management Plan Guidelines and LPP 3.3 – Fauna Management, a Vegetation and Fauna Management Plan will be prepared and implemented at subdivision stage to prevent damage to fauna habitats being retained, and ensure fauna is appropriately trapped and relocated. It will also include protocols for dealing with displaced/injured animals during clearing and subdivisional works. • Undertake weed control along the boundary of the Parks and Recreation reserve and Urban Development Areas, to avoid ingress into areas of retained vegetation. These management measures will be detailed in the Conservation Area Management Plan, or similar. • Conservation Area Management Plan(s), or similar, will be prepared in accordance with the City of Wanneroo's Environmental Management Plan Guidelines and LPP 1.1 – Conservation Reserves for areas of retained vegetation and fauna habitat onsite. These plans will provide guidance relating to vegetation and fauna habitat retention, revegetation zones, revegetation species and density, weed and disease control, drainage and nutrient management, access control, signage and bushfire prevention/risk management. • The Construction Environmental Management Plan will contain, amongst other items, hygiene protocols to prevent the spread of disease or weeds into the Parks and Recreation reserve and retained fauna habitat areas.

Mitigation Hierarchy	Assessment and Proposed Actions
	• Bushfire management can be undertaken within the site without impact to areas of retained vegetation and fauna habitat (see Bushfire Management Plan).
Rehabilitation	• Revegetation will occur within the Parks and Recreation reserve, subject to measures outlined in the Conservation Area Management Plan, or similar (Table 4-16).
Offsets	• Future development proposals proposing to clear Black Cockatoo habitat will require referral under the Commonwealth EBPC Act. The EPBC Act referral and assessment process will require further evaluation of impacts to Black Cockatoo and for environmental offsets to be provided, where required.

6.4 Predicted Outcome

The LSP will result in the following predicted outcomes to terrestrial fauna:

- Retention of approximately 13.0 ha (39.5%) of Black Cockatoo habitat within Parks and Recreation, which comprise of:
  - high value Carnaby's Cockatoo foraging habitat
  - moderate value Forest Red-tailed Black Cockatoo foraging habitat
  - 38 Black Cockatoo habitat trees with suitable diameter.
- Key areas of Black Cockatoo habitat retention are to be located within Parks and Recreation reserves, which will provide additional security of tenure.
- Loss of up to 19.9 ha (60.5%) of Black Cockatoo habitat onsite, including 57 Black Cockatoo habitat trees with suitable diameter; However, retention of Black Cockatoo habitat trees within road reserves, public open space and/or drainage basins could provide future habitat opportunities, once detailed engineering and planning design has been undertaken.
- Minimisation of impacts to resident fauna through fauna management and relocation measures prior to- and during construction in the Public Open Space and Urban Development areas, as per the Vegetation and Fauna Management Plan, or similar.
- Improvement in ecological condition and associated fauna habitat value in the Parks and Recreation reserve, through implementation of weed control and revegetation, as per the Conservation Area Management Plan(s), or similar.
- Environmental offsets for clearing of Black Cockatoo foraging habitat to be addressed through the DCCEEW EPBC Act referral and assessment process.

7 Social Surroundings

7.1 Key Policies and Guidance

Relevant policy and guidance documents for social surroundings, which have informed site-specific investigations and/or have been used to assess potential impacts, include:

- Environmental Factor Guideline – Social Surroundings (EPA, 2023)
- EPA Guidance Statement No. 3 Separation Distances between Industrial and Sensitive Land Uses (EPA, 2005)
- State Planning Policy 2.4 Basic Raw Materials (SPP 2.4) (WAPC, 2021b)
- State Planning Policy 5.4 Road and Rail Noise (SPP 5.4) (WAPC, 2019)
- *Aboriginal Heritage Act 1972*

7.2 Receiving Environment

A search of the Department of Planning, Lands and Heritage (DPLH) Aboriginal Cultural Heritage (ACH) Inquiry System identified that the site does not contain any registered sites or other heritage places (DPLH, 2025b):

The closest Aboriginal Heritage site noted is Gnangara Site 3 located approximately 1.4 km southwest of the subject site. Gnangara Site 3 is a lodged site associated with a Burial (ID1017) (Landgate, 2025b).

A search of the Heritage Council InHerit database (Heritage Council, 2024) and the City of Wanneroo Heritage List (CoW, 2025) indicates that there are no recorded heritage sites located on the site or within a 1km radius of the site.

The Department of Mines, Industry, Regulation and Safety (DMIRS) GeoView database does not indicate the presence of any SPP 2.4 Basic Raw Materials extraction sites or exclusions areas within the landholdings (DEMIRS, 2025).

The site is not mapped within any strategic freight and/or major traffic routes as identified by State Planning Policy 5.4 Road and Rail Noise (WAPC, 2019).

The closest industrial area to the site is located approximately 1.8km to the south (Wangara Industrial Area, zoned General Industry) (CoW, 2025). Given the presence of sensitive land uses between the industrial area and the site, any associated land use buffer requirements would not be anticipated.

Markets gardening and other intensive primary industry activities exist with the site and surrounding areas. The interface between these land uses and future development needs to take into consideration how these land uses are separated.

The EPA recommends the below generic separation distances (Table 7-1) to sensitive land uses.

Table 7-1: EPA recommended separation distances to sensitive land uses

Land use	Recommended generic separation distance
Market gardening (broad-scale operations)	300-500m, depending on size
Nurseries (no composting)	100m
Greenhouses (using manure or compost)	200-300m
Orchards (broad-scale operations)	500m
Turf farms and lawns (broad-scale turf production)	500m
Extractive industries (sand and limestone extraction)	300-500m, depending on size

Source: EPA, 2005

7.3 Potential Impact Identification and Assessment

There are no known Aboriginal or European heritage sites within the landholdings. There is potential that currently undiscovered matters of Aboriginal cultural significance may be identified during the site construction program. Disturbance of these items without approval is prohibited under the AH Act.

Development planning for the site will take into consideration the presence of active land uses at the time of subdivision which require separation from sensitive land uses.

The use of separation distances and/or other methods to provide adequate treatment and management between residential and agricultural/industrial land uses (which are likely to be for a temporary period of time prior to development progressing across these locations) will be addressed through regulator liaison and subdivision stage approval processes.

Dust generation is a potential impact of the construction program. The potential for dust generation is likely to be the highest in summer afternoon when wind conditions are at their strongest. Actions which can be undertaken to reduce the risk of dust generation and nuisance impacts include:

- Use of dust suppression measures, including application of water to the construction site or placement of hydromulch to stabilise cleared areas once earthworks have been completed
- Limiting stockpile numbers and size onsite
- Limiting vehicle speeds to a maximum of 15 km/hr
- Covering of soil loads transported to and from the site
- Undertake regular cleaning of road and sealed surfaces
- Staging of works to minimise the size of the open/disturbed areas present onsite at any one time
- Have dust fencing available for use, if required
- Undertake dust monitoring
- Maintain a complaints register and investigate/undertake responsive actions to any complaints received

Dust management will be addressed within the proposed Construction Environment Management Plan(s).

7.4 Impact Mitigation

Table 7-2 summarises the impacts and outlines the avoidance and minimisation actions which are proposed in relation to Social Surroundings.

Table 7-2: Social Surroundings Mitigation Hierarchy

Mitigation Hierarchy	Proposed Actions
Impact	
Social Surroundings	• Potential land use conflicts between nearby agricultural land uses and future onsite sensitive land uses • Identification of currently undiscovered areas or materials which have Aboriginal cultural heritage significance and are protected under the AH Act • Dust generation impacting human health and amenity of residents
Mitigation Hierarchy	
Avoidance	• No known Aboriginal or European heritage sites are located within the landholdings
Minimisation	• Ensure all contractors working on the site are aware of the requirements of the AH Act in relation to finding material of potential cultural significance • The use of separation distances and/or other methods to provide adequate treatment and management between residential and agricultural/industrial land uses will be addressed through regulator liaison and subdivision stage approval processes • Address dust management requirements which may include: ▪ Use of dust suppression measures, including application of water to the construction site or placement of hydromulch to stabilise cleared areas once earthworks have been completed ▪ Limiting stockpile numbers and size onsite ▪ Limiting vehicle speeds to a maximum of 15 km/hr ▪ Covering of soil loads transported to and from the site ▪ Undertake regular cleaning of road and sealed surfaces ▪ Staging of works to minimise the size of the open/disturbed areas present onsite at any one time ▪ Have dust fencing available for use, if required ▪ Undertake dust monitoring ▪ Maintain a complaints register and investigate/undertake responsive actions to any complaints received • A Construction Environmental Management Plan or similar will be prepared for the site. This will contain, amongst other items a summary of key obligations under the AH Act regarding potential finds of cultural significance and dust management requirements to prevent loss of surface soils and soil stabilisation requirements

7.5 Predicted Outcome

The LSP will result in the following predicted outcomes to social surroundings:

- The use of separation distances and/or other methods to provide adequate treatment and management between residential and agricultural/industrial land uses (which are likely to be for a temporary period of time prior to development progressing across these locations) will be addressed through regulator liaison and subdivision stage approval processes
- Future construction to address dust management requirements.
- Preparation and implementation of a Construction Environmental Management Plan or similar for future subdivisional works, which will include:
  - key obligations under the AH Act regarding potential finds of cultural significance
  - dust management requirements to prevent loss of surface soils and soil stabilisation requirements.

8 Other Matters

8.1 Bushfire Risk

Much of the site is located in a bushfire prone area by the Department of Fire and Emergency Services (DFES) (Plate 8-1) (Landgate 2025b). These areas are defined as being subject to, or likely to be subject to, bushfire attack, and are identified by the presence of and proximity to bush fire prone vegetation.

Plate 8-1: Bushfire Prone Areas

Source: MNG, 2025

To address the risk of bushfire to the future development proposal within the LSP area, a dedicated Bushfire Management Plan (BMP) has been prepared for the site (Emerge Associates, 2025). This BMP is being submitted in support of the LSP and should be read in conjunction with this Environmental Assessment Report.

Key components of the BMP which are relevant to environmental matters include:

- The BAL assessment conducted as part of the BMP indicates that all future habitable buildings within the proposed development can be sited to achieve BAL-29 or less. A number of the development cells have BAL-40 incursions as result of retained vegetation within the parkland reserves, however, the development cells are sufficiently sized to accommodate appropriately oriented lots at subdivision, allowing for in-lot setbacks to achieve BAL-29.
- Areas designated for parkland reserve purposes have been assumed to retain existing native vegetation and remain unmanaged. These areas area assumed to maintain a forest classification.
- Classified vegetation that has been identified outside of the proponent's landholdings has been assumed to remain in its current state (unless stated otherwise) and will therefore continue to be a bushfire hazard to development within the site.
- The BMP has been prepared under the assumption that the future Shenton Road Reserve area to the south will be developed prior to subdivision commencing within the southern portions of the site. If, at the time of subdivision, this road is not or will not be delivered, a revised approach to development in this area will be required.

An extract of the BAL mapping for the site, identifying retained native vegetation areas, is provide in Plate 8-2.

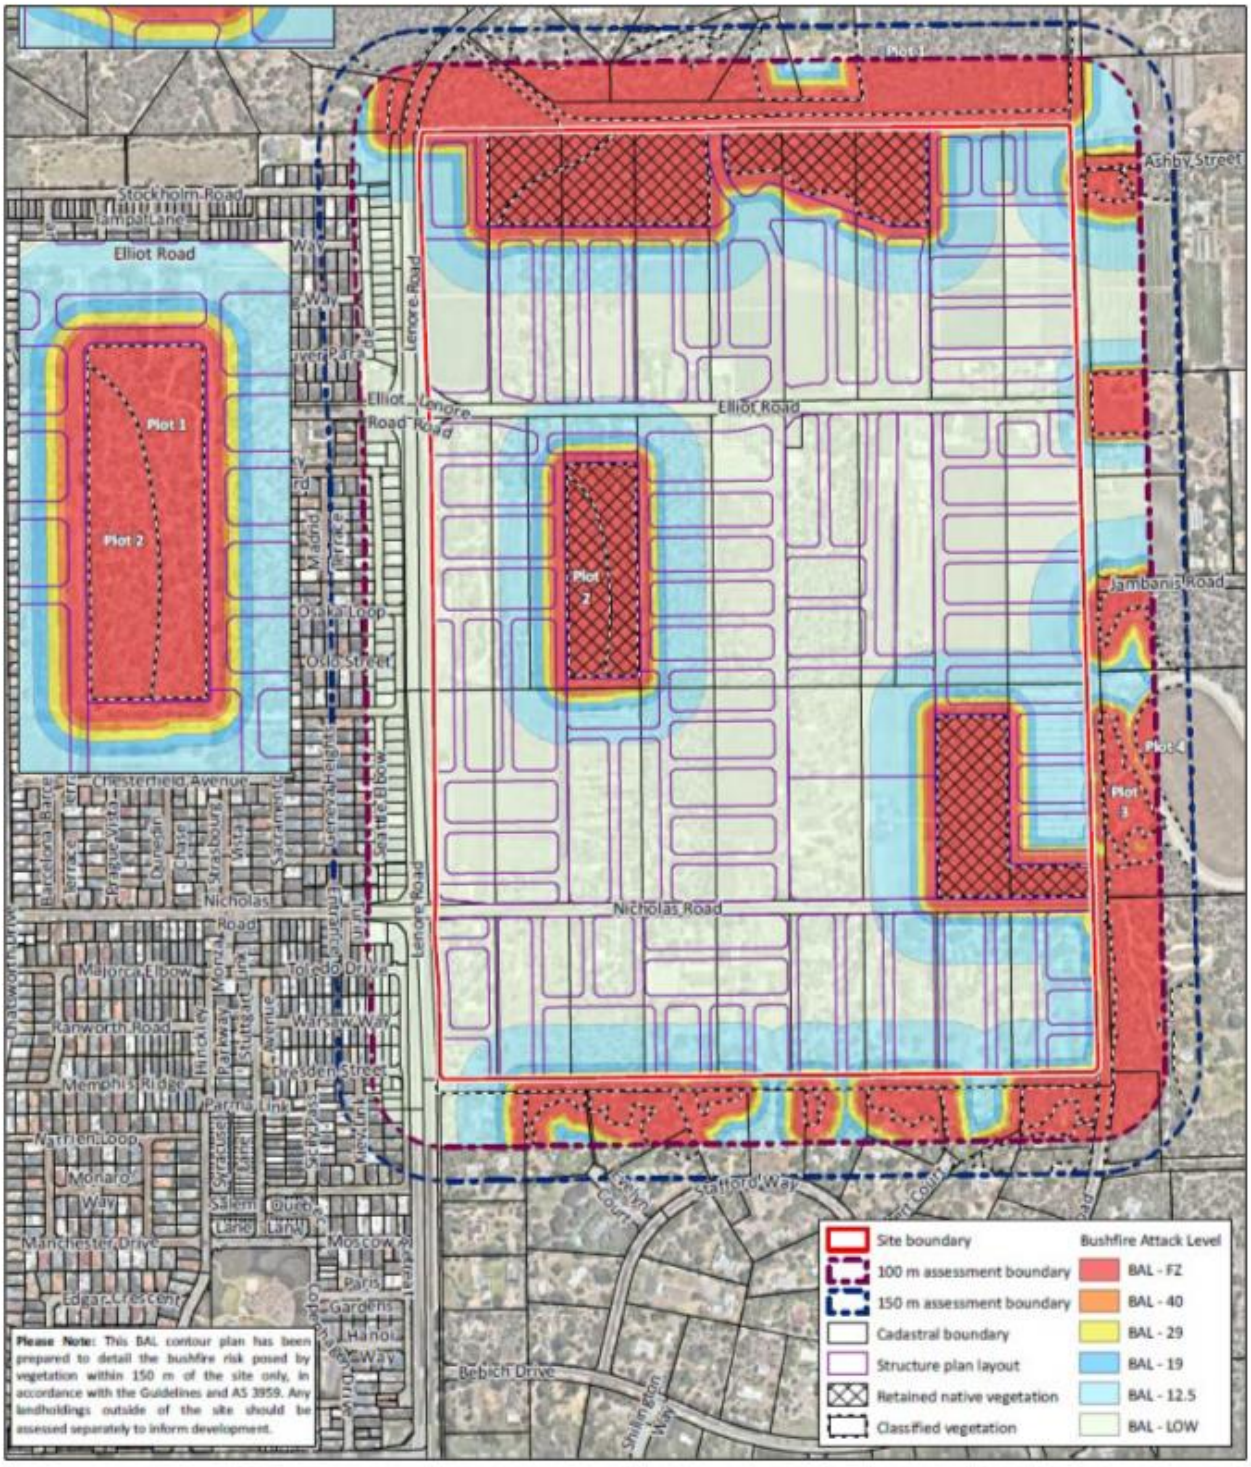

Plate 8-2: Bushfire Attack Level Contour Plan

Source: Emerge Associates, 2025

9 Environmental Management Framework

To ensure the proposed development is appropriately managed, an environmental management framework has been developed to outline the various environmental management plans, as identified as part of the environmental impact assessment and impact mitigations sections of this report, that will be implemented through various decision making authorities and at different stages of the project approval and implementation works (Table 9-1).

Table 9-1: Environmental Management Framework

Report / Management Plan	Timing / Stage of Project	Approval Required	Legislation or Agreement Regulating the Activity	Decision Making Authority	Environmental Management Outcome
Urban Water Management Plan(s)	Subdivision stage	Approval of plan(s) prior to construction commencing	*Planning and Development Act 2005* implemented as a condition of the approval of subdivision	DWER	Implementation of the UWMP will ensure the strategies and goals of the LWMS are archived in relation to water management
Bushfire Management Plan	Subdivision stage	Approval of plan(s) as prior to construction commencing Clearance that subdivision construction has met the requirements of the plan prior to issue of Certificate of Title	*Planning and Development Act 2005* implemented as a condition of the approval of subdivision	DFES / City of Wanneroo	Implementation of the plan will ensure that bushfire risks to the surrounding environment and future residents are addressed in accordance with SPP 3.7 to achieve an acceptable outcome
Conservation Area Management Plan(s) (or similar)	Subdivision stage	Approval of plan(s) prior to commencement of site work in relevant stages of the development	*Planning and Development Act 2005* implemented as a condition of the approval of subdivision	City of Wanneroo, on advice from DBCA, where relevant	Implementation of the plan will prevent and manage impacts of urban development on areas of retained vegetation and fauna habitat. Prepared in accordance with City of Wanneroo Environmental Management Plan Guidelines and LPP 1.1 – Conservation Reserves
Vegetation and Fauna Management Plan	Subdivision stage	Approval of the plan prior to construction (cleaning) commencing	*Planning and Development Act 2005* implemented as a condition of the approval of subdivision	City of Wanneroo	Implementation of the plan will mitigate impacts to native fauna during the clearing and construction phase and ensure that all activities are undertaken in accordance with requirements under the BC Act, and the City of Wanneroo Environmental Management Plan Guidelines and LPP 3.3 – Fauna Management
Construction Environment Management Plan(s)	Subdivision stage	Approval of plan(s) prior to commencement of site work	*Planning and Development Act 2005* implemented as a condition of the approval of subdivision	City of Wanneroo	Implementation of the plan will ensure appropriate management of key environmental factors as discussed in Sections 3 to 7 to mitigate risk to the surrounding environment

Report / Management Plan	Timing / Stage of Project	Approval Required	Legislation or Agreement Regulating the Activity	Decision Making Authority	Environmental Management Outcome
Preliminary Contamination Investigation	Subdivision stage	Approval of PSI, or identification of additional investigation, reporting and/or remediation requirements to be addressed	*Contaminated Site Act 2003*	DWER	The PSI will identify if any additional contamination investigations are required. Should detailed investigation or remediation be required the associated reports would be approved by DWER to ensure potential environmental risks are managed.

1 INTRODUCTION

1.1 Purpose

East Wanneroo Precinct 3 is located in the City of Wanneroo approximately 20km north of the Perth Central Business District (Figure 1). The Precinct is bound by Lenore Road to the west, a fire break, Benmuni Park and large residential lots to the north, Benmuni Road to the east and an unmade road reserve and large residential lots to the south (Figure 2).

PGV Environmental was commissioned by Strategen-JBS&G to undertake a Flora, Vegetation and Fauna Survey of the native vegetation on eight lots within Precinct 3.

1.2 Survey Area

The lots included in the survey are listed in Table 1 and shown on Figure 2.

Table 1: Lots Included in the Study

Lot	Street Number	Area (ha)	Area of native Vegetation approx. (ha)
Lot 29 Elliott Road	179	4.4	3.0
Lot 30 Elliott Road	191	4.4	2.4
Lot 3 Elliott Road	178	2.2	0.4
Lot 43 Elliott Road	194	4.4	3.7
Lot 42 Elliott Road	206	4.4	3.3
Lot 40 Elliott Road	226	4.2	3.7
Lot 11 Elliott Road	238	2.2	0
Lot 62 Nicholas Road	62	3.4	2.3
TOTAL			**18.8**

1.3 Scope of Works

A Detailed Flora and Vegetation survey was undertaken in accordance with *EPA Technical Guidance: Flora and Vegetation Surveys* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened flora databases;
- A search of Atlas of Living Australia (ALA, 2022) database;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act);
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Recording of any significant plant species using a hand-held GPS;

- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

A Basic Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). The survey included the following:

- A search of the DBCA Database for the general area for Threatened and Priority Species;
- A search of Atlas of Living Australia for records in the area (ALA, 2022);
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the Environment Protection and Biodiversity Conservation (EPBC) Act 1999 or international migratory bird agreements (JAMBA/CAMBA);
- A review of studies previously undertaken in the vicinity of the site;
- A description of the fauna habitats present on the site from field surveys; and
- An assessment of the significance of the site for conservation significant species in a local and regional context.

The Black Cockatoo Habitat Assessment was undertaken to:

- Describe the Black Cockatoo habitat on the site;
- Searching for evidence of foraging on any trees such as chewed Banksia, Jarrah and Marri nuts;
- Looking for evidence of roosting or breeding;
- Measuring and assessing the breeding habitat potential for all Jarrah, Marri and Tuart (if present) trees with a diameter of at least 50cm at breast height;
- Mapping the location of any potential breeding habitat trees;
- Determine the impact of potential development on Black Cockatoos if the site was to be cleared; and
- Assess the clearing in the context of the significance of the impact on Black Cockatoos.

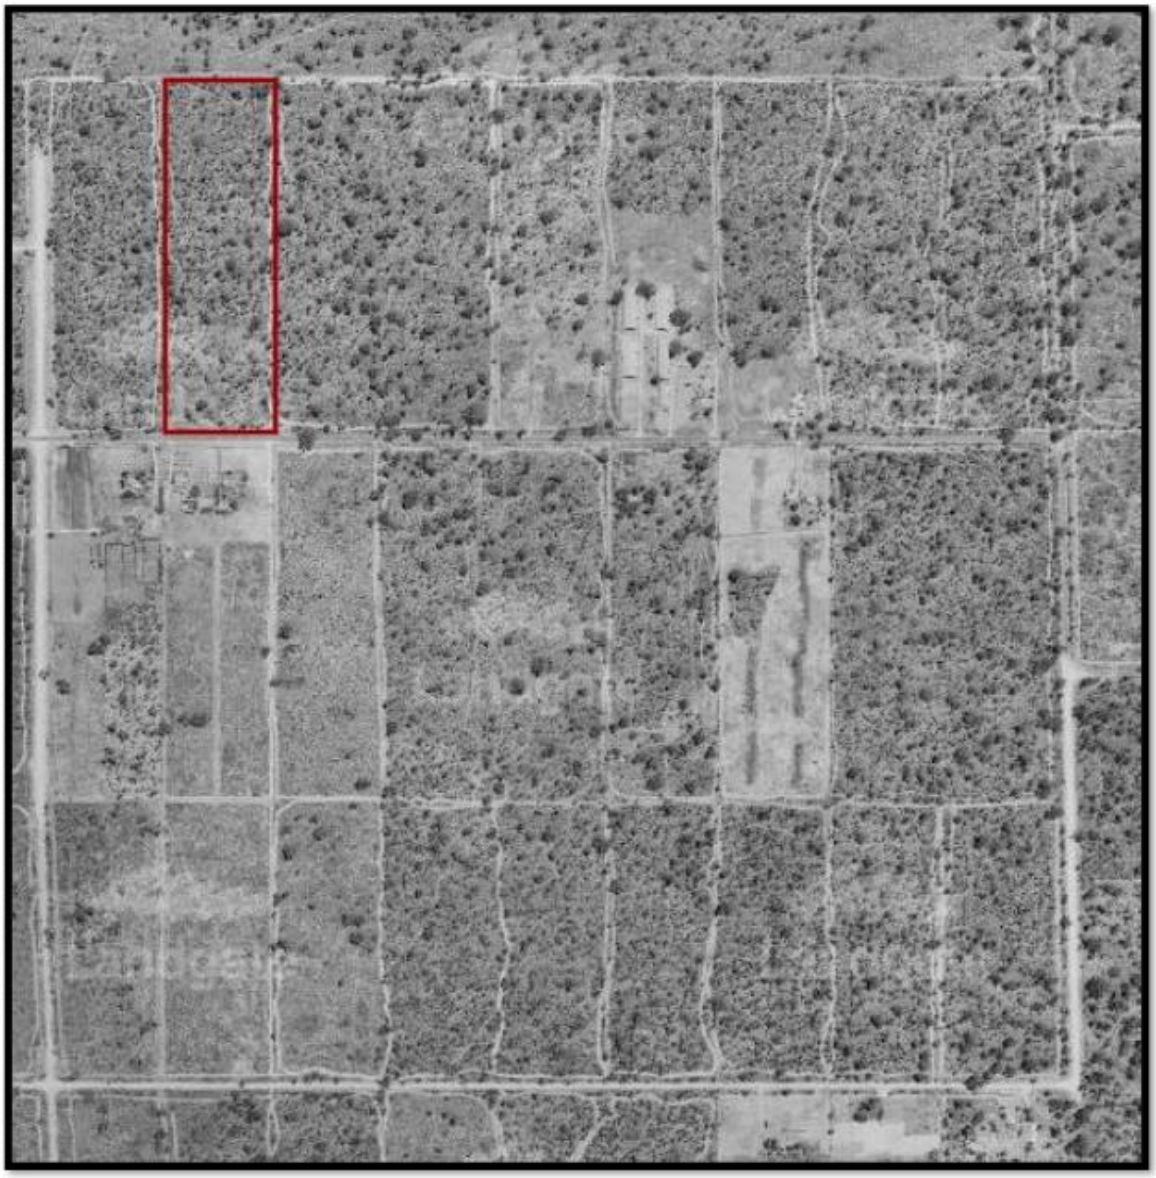
2 EXISTING ENVIRONMENT

2.1 Land Use

Historical aerial photography shows that that most of the lots were largely vegetated in 1965 (the oldest historical aerial photography available) (Plate 1). Lot 3 Elliot Road appears to have been mostly cleared and a house has been established on the lot. The trees on Lot 43 Elliot Road appear to have been cleared. Lot 11 Elliot Road is almost completely cleared (Plate 1).

The alignment of Benmuni Road to the east and Lenore Street to the west is evident and firebreaks have been cleared around each lot.

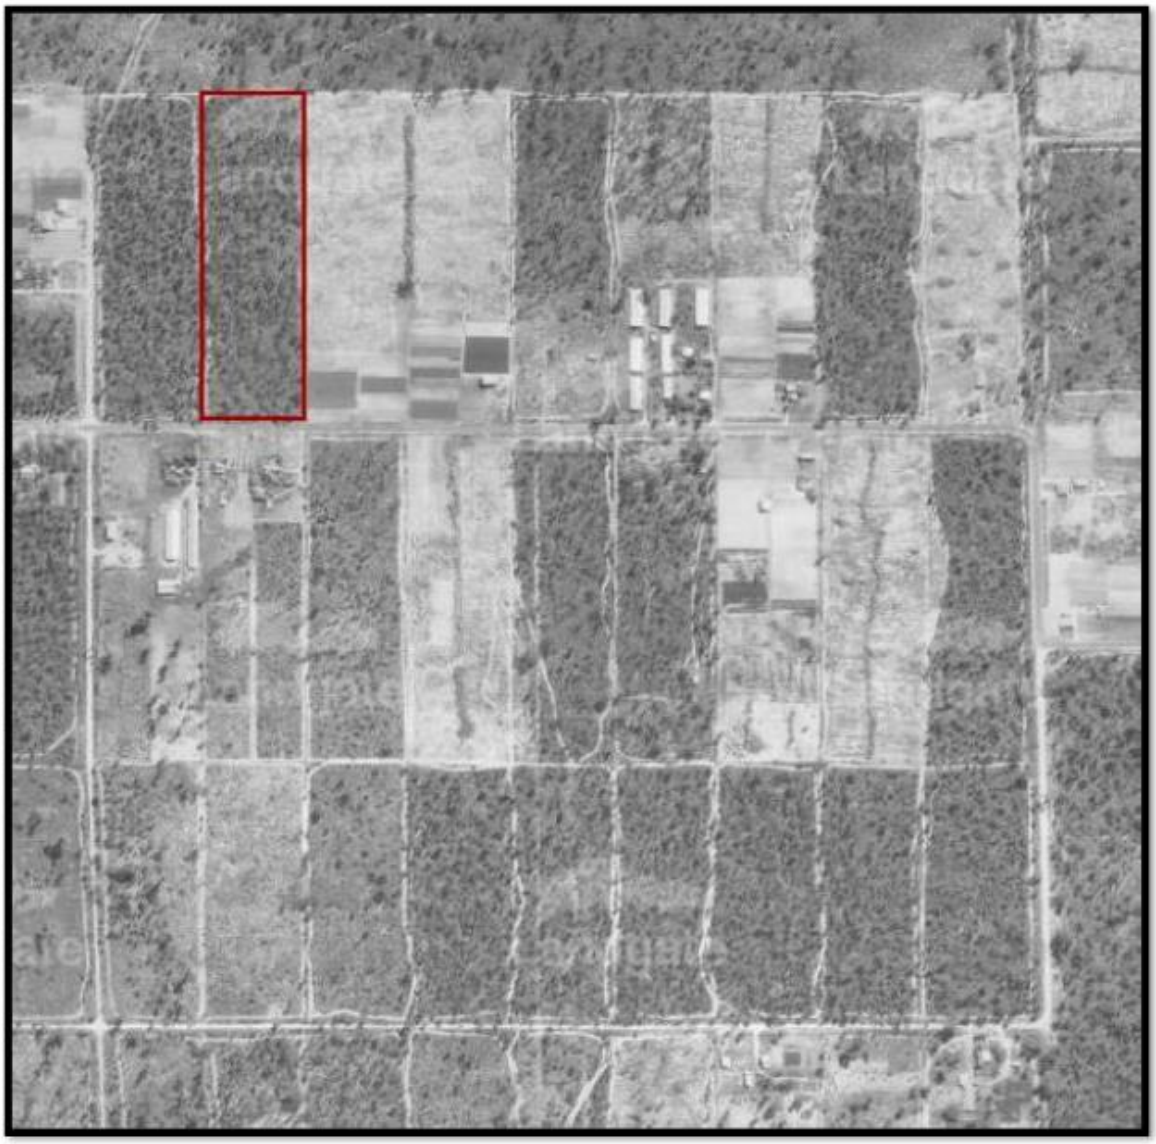
Plate 1: Aerial Photograph from 1965 (Landgate, 2022)



By 1970 Lot 30, Lot 42 and Lot 11 Elliot Road have been completely cleared (Plate 2). A market garden has been established on the southern part of Lot 30 Elliot Road. The vegetation on Lot

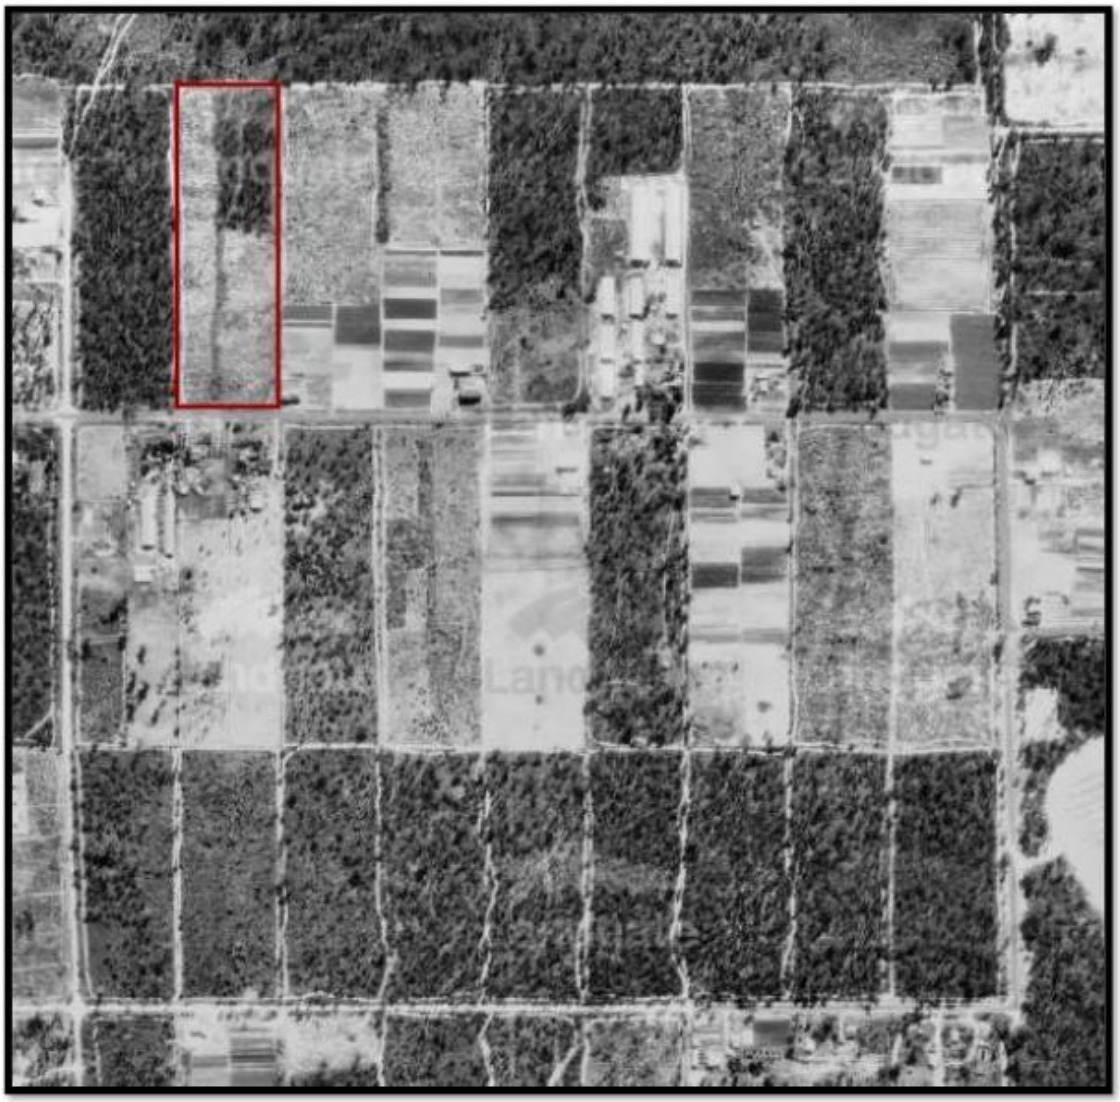
43 Elliot Road appears to be regenerating. Lot 29 Elliot Road and Lot 62 Nicholas Road remain vegetated.

Plate 2: Aerial Photograph from 1970 (Landgate, 2022)



In the photograph from 1974 (Plate 3) Lot 29 Elliot Road has been largely cleared. Lot 40 Elliot Road and Lot 62 Nicholas Road remain vegetated.

Plate 3: Aerial Photograph from 1974 (Landgate, 2022)

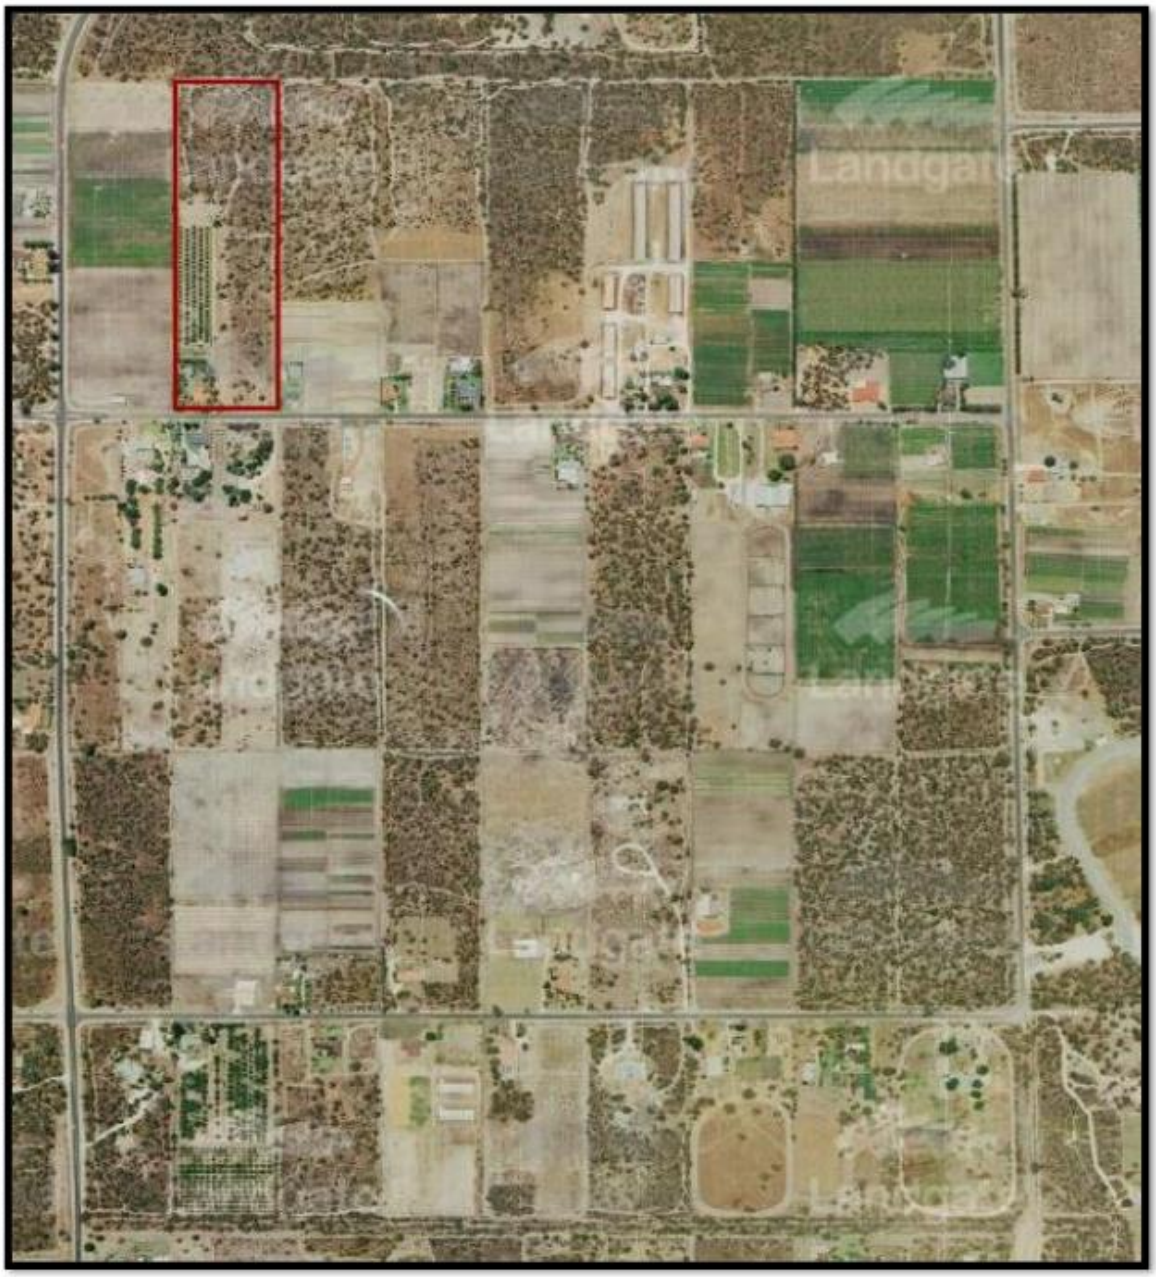


In the aerial photograph from 1981 the vegetation on Lot 43 Elliot Road is partially cleared in the south-western corner (Plate 4). There appears to be regrowth vegetation establishing on Lot 29, Lot 30 and Lot 42 Elliot Road.

Plate 4: Aerial Photograph from 1981 (Landgate, 2022)

The aerial photograph from 1995 shows Lot 43 Elliot Road and Lot 62 Nicholas Road partially cleared (Plate 5).

Plate 5: Aerial Photograph from 1995 (Landgate, 2022)



The review of historic aerial photographs shows that the native vegetation on most of the lots has had some degree of disturbance but many areas have regenerated. Only the north-eastern corner of Lot 29 Elliot Road, the northern part of Lot 62 Nicholas Road and most of Lot 40 Elliot Road have not been cleared in the past.

2.2 Topography

The survey area is undulating with elevations ranging from around 56m to 70 m AHD.

2.3 Geology and Soils

The site is mapped as part of the Spearwood System which has the highest relief of the dune systems on the Swan Coastal Plain (Bolland, 1998). The Spearwood system consists of slightly calcareous Aeolian sand remnant from leaching of the underlying Pleistocene Tamala limestone (Davidson, 1995).

The soil on the site has been mapped and described as Karrakatta Sand Yellow Phase (211Sp_Ky) which are undulating dunes on Aeolian sand over limestone in the Swan Coastal Plain between Wanneroo and Lancelin and are yellow deep sands.

2.4 Hydrology

The Perth Groundwater Map (DWER, 2022) indicates the historical maximum groundwater level under the site has an elevation of around 40 to 41m AHD. The direction of groundwater flow is to the west-south-west.

The depth to the historical maximum groundwater ranges from 16 to 29m. Accordingly, there are no wetlands on the site.

3 FLORA AND VEGETATION

3.1 Methodology

3.1.1 Desktop Searches

Searches of the following databases were undertaken prior to the site survey:

- DBCA Threatened and Priority Flora Databases including the WA Herbarium database (WAHerb) and Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) for a radius of 20 km that provides a list of Threatened and Priority species recorded in the area;
- Atlas of Living Australia (ALA, 2022) (Appendix 2) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2022) (Appendix 3) which identifies species that are listed as Endangered, Threatened or Priority under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) could potentially have habitat within a 5km radius of the site.

3.1.2 Site Survey

A flora and vegetation survey of the site was conducted by Dr Paul van der Moezel on 26 and 30 September and 25 October 2022. The survey included sampling from quadrats as well as a thorough walk over the area along west-east transects spaced about 20m apart. The quadrats were sampled on two occasions, one on 26 or 30 September 2022 and a follow-up on 25 October 2022. Track logs for the September surveys are shown in Plate 6.

A total of six permanently marked 10m x 10m quadrats were sampled for species presence, height and density. The quadrats were pegged in the north-west corner. The number of quadrats was considered appropriate given the similarity of the vegetation types and the size of the area to be surveyed. Site coverage was very high due to the ease of access through the open understorey and the size of the site.

Most plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

Plate 6: Track Log

3.1.3 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 2 in order to assess the adequacy of the survey. Rainfall for Perth (Measured at Perth Airport, Site Number 009021) was slightly below average in July being 124.2 mm compared to an average of 155.2 mm, above average for August in 2022 being 172.6 mm and September being 101.4 mm compared to mean values of 118.5 mm and 72.6 mm (BOM, 2022).Rainfall in October was lower than average at 26.4 mm compared to an average of 40.4 mm The above average rainfall in August and September and below average rainfall in October is not considered to be a constraint on the survey.

In summary there were no constraints to the survey.

Table 2: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has extensive botanical survey experience on the Swan Coastal Plain.
Proportion of the flora identified^	No	The timing of the survey in mid-September and mid-October was optimal to record most of the native species.
Sources of information (historic/recent or new data)	No	The flora of the Swan Coastal Plain is fairly well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2022 was a good year for ephemeral species.
Disturbances (Fire)	No	The fire age of the vegetation was greater than 5 years
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	Approximately 22 hours spent on the site. The open understorey made for easy site access.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Accessible site in the Perth Metropolitan Region
Availability of contextual (e.g. bioregional) information for the study area.	No	Bush Forever, Gibson *et al.* (1994)

*Constraints have been rated as Significant, Moderate or No constraints
^Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

3.2 Desktop Studies

3.2.1 Flora Database Searches

The results from the database searches are shown in Table 3. There were 99 species identified in the database searches including 23 Threatened species and 76 Priority species. Table 3 also lists the likelihood that any of the conservation significant species identified in the database searches could occur on the site based on the soil types and vegetation condition. None of the species identified in the database searches have been recoded from the site.

Table 3: Identified Significant Flora Species and Likelihood of Occurring on the Site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Caladenia huegelii	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Critically Endangered	Endangered	The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009a). This species generally does not survive in disturbed areas.	Possible in areas that have not been cleared in the past
Calectasia cyanea	Blue Tinsel Lily	Critically Endangered	Critically Endangered	The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South West Botanical Province (Barrett and Dixon, 2001).	No – outside of species range
Drakaea elastica	Glossy-leafed Hammer Orchid	Critically Endangered	Endangered	The Glossy-leafed Hammer Orchid prefers low-lying situations adjoining winter-wet swamps and grows on bare patches of sand within otherwise dense vegetation in low-lying areas alongside winter-wet swamps, typically in banksia (*Banksia menziesii, B. attenuata* and *B. ilicifolia*) woodland or spearwood (*Kunzea glabrescens*) thicket vegetation (DEC, 2009b).	Highly Unlikely – no winter-wet habitat
Grevillea curviloba subsp. curviloba	Narrow curved-leaf Grevillea	Critically Endangered	Endangered	Narrow curved-leaf Grevillea occurs in grey sand in winter-wet heath. There are 17 known populations in an area between Muchea and Badgingarra (Phillimore and English, 2000).	Highly Unlikely – no winter-wet heath habitat
Synaphea sp. Fairbridge Farm (D Papenfus 696)	Selena's Synaphea	Critically Endangered	Critically Endangered	Selena's Synaphea occurs in sandy soils with lateritic pebbles near winter-wet flats, in low woodland with weedy grasses.	Highly Unlikely – not lateritic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Thelymitra dedmaniarum	Cinnamon Sun-orchid	Critically Endangered	Endangered	Cinnamon Sun-orchid is known from only two locations in the Gidgegannup area. It is confined to open wandoo woodland on red-brown sandy loam associated with dolerite and granite outcropping (DEC, 2012a).	Highly Unlikely – no dolerite habitat
Trithuria occidentalis	Swan Hydatella	Critically Endangered	Endangered	Swan Hydatella grows partly submerged on the edge of shallow, winter-wet claypans in very open shrubland of Robin Redbreast Bush (*Melaleuca lateritica*) and numerous annual herbs.	No -no suitable habitat
Darwinia foetida	Muchea Bell	Endangered	Critically Endangered	The Muchea Bell is found in grey-white sand on swampy, seasonally wet sites.	Highly Unlikely – no swampy habitat
Diuris purdiei	Purdie's Donkey-orchid	Endangered	Endangered	Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps with winter inundation in dense heath with scattered trees and amongst native sedges and dense heath with scattered emergent *Melaleuca preissiana*, *Eucalyptus calophylla*, *E. marginata* and *Nuytsia floribunda*.	Highly Unlikely – no winter-wet habitat
Drakaea micrantha	Dwarf Hammer-orchid	Endangered	Vulnerable	Dwarf Hammer-orchid usually occurs on cleared fire breaks or open sandy patches in Banksia, Jarrah and Sheoak woodlands or forest and often found under Spearwood thickets.	Highly Unlikely – not typical habitat and has not been recorded within 20km of the site
Grevillea curviloba subsp. *incurva*	Narrow curved-leaf Grevillea	Endangered	Endangered	Narrow curved-leaf Grevillea prefers sand, sandy loam in winter-wet heath.	Highly Unlikely – no winter-wet heath habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Macarthuria keigheryi	Keighery's Macarthuria	Endangered	Endangered	Keighery's Macarthuria prefers white or grey sand on low-lying winter-wet damp sands growing among heathland, Jarrah and Sheoak/Banksia woodland and Banksia/Eucalypt Woodland (DEC, 2008).	Highly Unlikely – no winter-wet habitat
Marianthus paralius		Endangered	Endangered	*Marianthus paralius* occurs in white sand and brown loam amongst heath on coastal limestone cliffs (DEC, 2009c).	Highly Unlikely – not coastal limestone habitat
Melaleuca sp. Wanneroo (G.J. Keighery 16705)		Endangered	Endangered	*Melaleuca* sp. Wanneroo occurs in very shallow soils over limestone 'caprock' on ridges.	Highly Unlikely – no limestone caprock habitat
Acacia anomala	Grass Wattle, Chittering Grass Wattle	Vulnerable	Vulnerable	The Grass Wattle prefers lateritic soils and slopes.	Highly Unlikely – not lateritic habitat
Andersonia gracilis	Slender Andersonia	Vulnerable	Endangered	Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps. Vegetation type is low open heath with shrubs over sedges (DEC, 2006).	Highly Unlikely – no winter-wet habitat
Anigozanthos viridis subsp. *terraspectans*	Dwarf Green Kangaroo Paw	Vulnerable	Vulnerable	The Dwarf Green Kangaroo Paw occurs on grey sand, clay loam in winter-wet depressions.	Highly Unlikely – no winter-wet habitat
Banksia mimica	Summer Honeypot	Vulnerable	Endangered	Summer Honeypot prefers white or grey sand over laterite, sandy loam.	Highly Unlikely – not lateritic habitat
Diuris drummondii	Tall Donkey Orchid	Vulnerable	Vulnerable	The Tall Donkey Orchid grows in low-lying depressions, swamps, in areas that contain surface water well into summer (Brown *et al.*, 2013).	Highly Unlikely – no swamp habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Diuris micrantha	Dwarf Bee-orchid	Vulnerable	Vulnerable	The Dwarf Bee-orchid is usually found on brown loamy clay in winter-wet swamps, in shallow water.	Highly Unlikely – no winter-wet habitat
Eleocharis keigheryi	Keighery's Eleocharis	Vulnerable	Vulnerable	Keighery's Eleocharis occurs in clay, sandy loam and is emergent in freshwater: creeks, claypans.	No -no suitable habitat
Eucalyptus argutifolia	Yanchep Mallee, Wabling Hill Mallee	Vulnerable	Vulnerable	The Yanchep Mallee occurs in shallow soils over limestone on slopes or gullies of limestone ridges, outcrops.	Highly Unlikely – no limestone habitat
Paracaleana dixonii	Sandplain Duck Orchid	Vulnerable	Endangered	Sandplain Duck Orchid occurs in grey sand over granite.	Highly Unlikely – not granitic habitat and outside of the species range
Baeckea sp. Limestone (N. Gibson & M.N. Lyons 1425)		Priority 1		*Baeckea* sp. Limestone is recorded from limestone outcrop/ridge in yellow sand derived from Tamala Limestone - Spearwood Dune System in bushland burnt 5+ years (Western Australian Herbarium, 2012).	Highly Unlikely – no limestone habitat
Bolboschoenus fluviatilis	River Bulrush	Priority 1		River Bulrush occurs on the margins of wetlands and rivers.	No – not suitable habitat
Calandrinia sp. Bayswater (C. Andrews s.n. 11/1902)		Priority 1		*Calandrinia* sp. Bayswater is known from Bayswater only record was in 1902.	Highly Unlikely due to lack of any records
Drosera paleacea	Dwarf Sundew	Priority 1		Dwarf Sundew occurs in white sand, sandy clay.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Drosera patens		Priority 1		*Drosera patens* occurs in sandy soils on the margins of winter-wet depressions, swamps and lakes.	Highly Unlikely – no winter-wet habitat
Drosera x sidjamesii		Priority 1		*Drosera x sidjamesii* grows in peaty sand along lake margins, close to winter high-water line.	Highly Unlikely – no lake side habitat
Grevillea sp. Ocean Reef (D. Pike Joon 4)		Priority 1		*Grevillea* sp. Ocean Reef (D. Pike Joon 4) occurs in dry brown/grey sand, yellow brown sand on sandy dune, gully in coastal scrub.	Highly Unlikely – not coastal dune habitat
Hydrocotyle striata		Priority 1		*Hydrocotyle striata* occurs in clay near springs.	No – no suitable habitat
Lepidium pseudohyssopifolium	Peppercress	Priority 1		Peppercress occurs on swampy ground.	Highly Unlikely – no swamp habitat
Leucopogon maritimus		Priority 1		*Leucopogon maritimus* occurs in Quindalup deep, calcareous sands, on the mid to upper slopes of dunes or in shallow sand over limestone, but avoiding the thicker vegetation of the swale (Hislop, 2011)	Highly Unlikely – not Quindalup habitat
Levenhookia preissii	Preiss's Stylewort	Priority 1		Preiss's Stylewort occurs in grey or black peaty sands in swamps.	Highly Unlikely – no swamp habitat
Neotysonia phyllostegia		Priority 1		*Neotysonia phyllostegia* is recorded near pools (National Herbarium of Victoria, 1890)	Highly Unlikely – no pool habitat
Stachystemon exilis		Priority 1		*Stachystemon exilis* grows in grey sand with thin litter layer (Western Australian Herbarium, 1999) and is generally in association with open, low-lying Banksia woodland in which *B. ilicifolia* is a significant component of the upper canopy (Hislop and Davies, 2020).	Highly Unlikely – no low-lying habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Acacia benthamii		Priority 2		*Acacia benthamii* grows on sand, typically on limestone breakaways	Highly Unlikely – no limestone breakaway habitat
Calectasia elegans	Elegant Tinsel Lily	Priority 2		Elegant Tinsel Lily occurs in deep grey quartz soils on gentle slopes, above damplands.	Highly Unlikely – no dampland habitat
Calectasia grandiflora	Blue Tinsel Lily	Priority 2		Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	Highly Unlikely – not suitable habitat
Calymperastrum latifolium		Priority 2		*Calymperastrum latifolium* is recorded from a shaded Macrozamia stem on a large rocky outcrop (Western Australian Herbarium, 1994).	Possible – *Macrozamia* occurs on the site
Fabronia hampeana		Priority 2		*Fabronia hampeana* occurs on sheltered wet trunk of *Macrozamia dyeri* in shrub layer (Western Australian Herbarium, 2005).	No – *Macrozamia dyeri* does not occur on the site
Lecania turicensis var. *turicensis*		Priority 2		*Lecania turicensis* var. *turicensis* occurs on coastal rocks, limestone (Western Australian Herbarium, 1988).	Highly Unlikely – no limestone habitat
Millotia tenuifolia var. *laevis*		Priority 2		*Millotia tenuifolia* var. *laevis* grows in granite or laterite soils.	Highly Unlikely – not lateritic habitat
Phyllangium palustre		Priority 2		*Phyllangium palustre* occurs in clay on winter-wet claypans, low-lying seasonal wetlands.	Highly Unlikely – no claypan habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Poranthera moorokatta		Priority 2		*Poranthera moorokatta* grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012).	Highly Unlikely – not suitable habitat
Ricinocarpos tuberculatus		Priority 2		*Ricinocarpos tuberculatus* grows in white/grey sand on coastal dunes.	Highly Unlikely – not coastal dune habitat
Scaevola paludosa		Priority 2		*Scaevola paludosa* prefers sandy soils.	No – this species is found on the Esperance Plains
Schoenus sp. Bullsbrook (J.J. Alford 915)		Priority 2		*Schoenus* sp. Bullsbrook grows in grey peaty sand on low-lying flats.	Highly Unlikely – no peaty habitat
Stenanthemum sublineare		Priority 2		*Stenanthemum sublineare* grows in littered white sand on coastal plain (Rye, 2001).	Highly Unlikely – not suitable habitat
Thelymitra variegata	Queen of Sheba	Priority 2		The Queen of Sheba orchid grows on sandy clay, sand and laterite. The orchid is found in banksia and Jarrah woodland (Brown *et al.*, 2013)	Highly Unlikely – not suitable habitat
Thysanotus sp. Badgingarra (E.A. Griffin 2511)		Priority 2		*Thysanotus* sp. Badgingarra grows in grey sand with lateritic gravel.	Highly Unlikely – not lateritic habitat
Acacia oncinophylla subsp. *oncinophylla*		Priority 3		*Acacia oncinophylla* subsp. *oncinophylla* occurs in granitic soils	Highly Unlikely – not granitic habitat
Adenanthos cygnorum subsp. *chamaephyton*		Priority 3		*Adenanthos cygnorum* subsp. *chamaephyton* occurs in grey sand, lateritic gravel.	Highly Unlikely – not lateritic habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Amanita carneiphylla	Miller's Pink-Gilled Lepidella	Priority 3		Miller's Pink-Gilled Lepidella is a deeply rooting species and grows in sandy soil with *Eucalyptus*, *Banksia*, and *Allocasuarina* and at one site, Mediterranean pine (*Pinus*) was also found (Tulloss, 2022).	Possible – may have habitat on the site
Amanita drummondii	Drummond's Grisette	Priority 3		Drummond's Grisette is solitary to gregarious in leaf litter in association with *Agonis flexuosa, A. theiformis, Allocasuarina fraseriana, Corymbia calophylla, Eucalyptus marginata, E. patens, E. staeri, Jacksonia furcellata, Kunzea glabrescens, Melaleuca sp., Podocarpus drouynianus, Taxandria parviceps*. (Davidson *et al.*, 2015) growing in sandy soil (Amanitaceae Org, 2015).	Unlikely – not typical habitat
Amanita fibrillopes	Peach Amanita	Priority 3		Peach Amanita is recorded from sandy or gravelly soil in dry sclerophyll forest and Banksia woodland, or in humus rich soil in seasonally wet eucalypt and paperbark woodland, often associated with *Eucalyptus marginata, E. jacksonii, Allocasuarina fraseriana, Corymbia calophylla, Melaleuca preissiana* and *Agonis* sp. (Davison *et al.*, 2013).	Highly Unlikely – no gravelly habitat
Amanita preissii	Cinnamon-ring Lepidella	Priority 3		Cinnamon-ring Lepidella is found under shrubs and Eucalyptus in West Australia (Amanitaceae Org, 2015) in sandy soil and lateritic gravel, associated with *Allocasuarina fraseriana, Acacia pulchella, Corymbia calophylla, Callitris sp., Eucalyptus gomphocephala, E. marginata, Macrozamia fraseri* and *Pinus pinaster* (Davidson *et al.*, 2017).	Highly Unlikely – not lateritic habitat
Austrostipa mundula	Neat Spear Grass	Priority 3		Neat Spear Grass occurs on plains in grey sand (Western Australian Herbarium, 2001) in coastal areas (Williams, 2022).	Highly Unlikely – not coastal habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Beyeria cinerea subsp. *cinerea*		Priority 3		*Beyeria cinerea* subsp. *cinerea* grows in sand over limestone on road verges, gullies.	Highly Unlikely – no limestone habitat
Carex tereticaulis		Priority 3		*Carex tereticaulis* prefers black peaty sand.	Highly Unlikely – no peaty habitat
Conostylis bracteata		Priority 3		*Conostylis bracteata* occurs in sand, limestone on consolidated sand dunes.	Highly Unlikely – no limestone habitat
Cyathochaeta teretifolia		Priority 3		*Cyathochaeta teretifolia* occurs in grey sand, sandy clay on swamps, creek edges.	Highly Unlikely – no swamp habitat
Dampiera triloba		Priority 3		*Dampiera triloba* grows in loamy sand (Australian National Herbarium, 2009) in lower lying areas.	Highly Unlikely – no low-lying habitat
Eryngium pinnatifidum subsp. *Palustre* (G.J. Keighery 13459)		Priority 3		*Eryngium pinnatifidum* subsp. *Palustre* is recorded from a winter wet claypan, water to 20 cm deep in grey-brown clay (Western Australian Herbarium, 1989)	Highly Unlikely – no claypan habitat
Guichenotia tuberculata		Priority 3		*Guichenotia tuberculata* grows in sand clay over laterite, sand.	Highly Unlikely – not lateritic habitat
Haemodorum loratum		Priority 3		*Haemodorum loratum* prefers grey or yellow sand, gravel.	Highly Unlikely – not suitable habitat
Hibbertia leptotheca		Priority 3		*Hibbertia leptotheca* grows near-coastal limestone ridges, outcrops and cliffs in coastal heaths and thickets usually dominated by species of *Melaleuca* and *Acacia* (Thiele, 2019).	Highly Unlikely – no coastal limestone habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Isopogon autumnalis		Priority 3		*Isopogon autumnalis* occurs in white, grey or yellow sand, often over laterite.	Highly Unlikely – no lateritic habitat
Jacksonia gracillima		Priority 3		*Jacksonia gracillima* occurs in grey and brown sand in winter-wet areas.	Highly Unlikely – no winter-wet habitat
Lasiopetalum membranaceum		Priority 3		*Lasiopetalum membranaceum* grows in sand over limestone.	Highly Unlikely – no limestone habitat
Leucopogon sp. Yanchep (M. Hislop 1986)		Priority 3		*Leucopogon* sp. Yanchep occurs in light grey-yellow sand, brown loam, limestone, laterite, granite on coastal plain, breakaways, valley slopes, low hills.	Highly Unlikely – not coastal habitat
Meionectes tenuifolia		Priority 3		*Meionectes tenuifolia* occurs on swamp margins on seasonally wet poorly drained flats or granite flats in shallow soils.	Highly Unlikely – no swamp habitat
Phlebocarya pilosissima subsp. *pilosissima*		Priority 3		*Phlebocarya pilosissima* subsp. *pilosissima* grows in white or grey sand, lateritic gravel.	Highly Unlikely – not lateritic habitat
Pimelea calcicola		Priority 3		*Pimelea calcicola* occurs in sand on coastal limestone ridges.	Highly Unlikely – not limestone habitat
Pithocarpa corymbulosa		Priority 3		*Pithocarpa corymbulosa* occurs in gravelly or sandy loam amongst granite outcrops.	Highly Unlikely – not suitable habitat
Sarcozona bicarinata	Ridged Noon-flower	Priority 3		Ridged Noon-flower is found in white sand.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Schoenus capillifolius		Priority 3		*Schoenus capillifolius* grows in brown mud on claypans.	Highly Unlikely – no claypan habitat
Schoenus sp. Waroona (G.J. Keighery 12235)		Priority 3		*Schoenus* sp. Waroona occurs in clay or sandy clay on winter-wet flats.	Highly Unlikely – no winter-wet habitat
Stylidium maritimum		Priority 3		*Stylidium maritimum* occurs in sand over limestone on dune slopes and flats in coastal heath and shrubland, open Banksia woodland.	Highly Unlikely – no limestone habitat
Stylidium paludicola		Priority 3		*Stylidium paludicola* prefers peaty sand over clay in winter wet habitats in Marri and Melaleuca woodland, Melaleuca shrubland.	Highly Unlikely – no winter-wet habitat
Stylidium trudgenii		Priority 3		*Stylidium trudgenii* grows in grey sand, dark grey to black sandy peat on the margins of winter-wet swamps, depressions.	Highly Unlikely – no swamp habitat
Styphelia filifolia		Priority 3		*Styphelia filifolia* occurs in sandy soils of the coastal plain (with one known occurrence from the northern Darling Scarp), usually in Banksia or Jarrah woodland and in low-lying situations (Hislop and Lelièvre, 2017).	Highly Unlikely – no low-lying habitat
Tetratheca pilifera		Priority 3		*Tetratheca pilifera* occurs in gravelly soils.	Highly Unlikely – no gravel habitat
Verticordia serrata var. *linearis*		Priority 3		*Verticordia serrata* var. *linearis* grows in white sand, gravel in open woodland.	Highly Unlikely – no suitable habitat
Anigozanthos humilis subsp. *chrysanthus*	Golden Cats Paw	Priority 4		Golden Cats Paw grows in grey or yellow sand.	Possible – may have habitat on the site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Cyanicula ixioides subsp. *ixioides*		Priority 4		*Cyanicula ixioides* subsp. *ixioides* grows in laterite, gravel.	Highly Unlikely – not lateritic habitat
Darwinia pimelioides		Priority 4		*Darwinia pimelioides* prefers loam, sandy loam on granite outcrops.	Highly Unlikely – no granite outcrop habitat
Drosera occidentalis	Western Sundew	Priority 4		The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions.	Highly Unlikely – no swamp habitat
Eucalyptus foecunda subsp. *foecunda*		Priority 4		*Eucalyptus foecunda* subsp. *foecunda* grows on yellowish coastal sands overlying limestone, often on limestony hills and dunes, in shrubland or very open woodland (Nicolle and French, 2021).	Highly Unlikely – not coastal habitat
Hibbertia helianthemoides		Priority 4		*Hibbertia helianthemoides* grows in clayey sand over sandstone or loam over quartzite on hills and scree slopes.	Highly Unlikely – no suitable habitat
Hydrocotyle lemnoides	Aquatic Pennywort	Priority 4		Aquatic Pennywort occurs in swamps	No – no swamp habitat
Hypolaena robusta		Priority 4		*Hypolaena robusta* grows in white sand on sandplains in poorly drained areas.	Highly Unlikely – no suitable habitat
Jacksonia sericea	Waldjumi	Priority 4		Waldjumi grows in calcareous and sandy soils.	Highly Unlikely – no calcareous habitat
Persoonia sulcata		Priority 4		*Persoonia sulcata* occurs in lateritic or granitic soils.	Highly Unlikely – no suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
Schoenus griffinianus		Priority 4		*Schoenus griffinianus* grows in white sand in low heath (Wilson, 1997).	Highly Unlikely – not heath habitat
Schoenus natans	Floating Bog-rush	Priority 4		Floating Bog-rush is an aquatic species that occurs in winter-wet depressions.	No – no suitable aquatic habitat
Stylidium longitubum	Jumping Jacks	Priority 4		Jumping Jacks prefer sandy clay, clay in seasonal wetlands.	Highly Unlikely – no wetland habitat
Tripterococcus sp. *Brachylobus* (A.S. George 14234)		Priority 4		*Tripterococcus* sp. *Brachylobus* occurs in grey, black or peaty sand winter-wet flats.	Highly Unlikely – no suitable habitat
Verticordia lindleyi subsp. *lindleyi*		Priority 4		*Verticordia lindleyi* subsp. *lindleyi* prefers sand, sandy clay in winter-wet depressions.	Highly Unlikely – no winter-wet habitat

* sourced from Florabase as well as the DBCA database searches unless otherwise denoted

3.3 TEC/PEC Database Searches

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 5km around the site (09-0822EC) (Appendix 5). An additional TEC was identified in the Protected Matters Search Tool Report (Appendix 3). The communities identified in the database searches are outlined in Table 4.

Table 4: Threatened and Priority Ecological Communities Identified in Database Searches

Number	Description	Conservation Status in Western Australia	Status under the EPBC Act
SCP20a	*Banksia attenuata* woodlands over species rich dense shrublands (floristic community type 20a as originally described in Gibson *et al*. (1994))	Endangered	Endangered as part of the Banksia WL SCP
SCP30a	*Callitris preissii* (or *Melaleuca lanceolata*) forests and woodlands, Swan Coastal Plain (floristic community type 30a as originally described in Gibson *et al.* (1994))	Vulnerable	
SCP21c	Low lying *Banksia attenuata* woodlands or shrublands	Priority 3	Endangered as part of the Banksia WL SCP
SCP22	*Banksia ilicifolia* woodlands	Priority 3	Endangered as part of the Banksia WL SCP
SCP23b	Swan Coastal Plain *Banksia attenuata* - *Banksia menziesii* woodlands	Priority 3	Endangered as part of the Banksia WL SCP
SCP24	Northern Spearwood shrublands and woodlands	Priority 3	
SCP25	Southern *Eucalyptus gomphocephala-Agonis flexuosa* woodlands	Priority 3	Critically Endangered as part of the Tuart Woodlands
SCP29a	Coastal shrublands on shallow sands	Priority 3	
Banksia WL SCP	Banksia Woodlands of the Swan Coastal Plain ecological community	Priority 3	Endangered
Tuart woodlands	Tuart (*Eucalyptus gomphocephala*) woodlands and forests of the Swan Coastal Plain	Priority 3	Critically Endangered

The Banksia Woodlands of the Swan Coastal Plain ecological community is mapped in the DBCA database as occurring on some of the lots.

3.4 Flora

A total of 168 species were recorded during the flora survey (Appendix 6). This total consisted of 130 native species and 38 introduced species (22.6%).

No Threatened or Priority plant species were recorded on the site.

Plant families with the greatest number of species were the Fabaceae (Wattle and Pea family – 21 species including 17 native and 4 introduced), Asteraceae (Daisy family – 14 species, 5 native, 9 introduced), Proteaceae (Banksia family – 13 species, all native), Orchidaceae (Orchid family – 13 species, all native), Myrtaceae (Myrtle family – 10 species, 7 native, 3 introduced) and the Cyperaceae (Sedge family – 9 species, all native).

The total number of species recorded in the six quadrats sampled ranged from 36-61 (av. 52.1) (Appendix 7). The vegetation in all six quadrats was in Very Good to Excellent condition.

3.5 Vegetation

3.5.1 Vegetation Complexes

Vegetation Complexes are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Heddle *et al.*, 1980). The vegetation on the site is part of the Karrakatta – Central and South Vegetation Complex (Heddle *et al.,* 1980) which is described as an open forest of Tuart-Jarrah-Marri, with Jarrah and Marri replacing Tuart while progressing eastwards. *Banksia attenuata, B. menziesii, B. grandis* and *Allocasuarina fraseriana* are also common tree species.

3.5.2 Vegetation Types

Vegetation Types are a finer level of vegetation mapping than the Vegetation Complex and are defined by the composition and structure of the dominant vegetation.

Four vegetation types were described and mapped on the site (Figure 3). A description of each type is provided in Table 5.

The vegetation types are similar structurally, with all four types being Low Open Woodlands, differing slightly with the dominant tree species. The understorey composition was also similar between the three vegetation types that were in Very Good condition.

Table 5: Vegetation Type Descriptions

Vegetation Type	Description	Photographs
BaBmAf *Banksia attenuata/B. menziesii/ Allocasuarina fraseriana* Low Open Woodland over *Hibbertia hypericoides* Open Low Heath	Recorded in two separate locations on the site. *Banksia attenuata, B. menziesii* and *Allocasuarina fraseriana* co-dominated the tree canopy and averaged 5m high. Common understorey species included *Hibbertia hypericoides, Eremaea pauciflora, Xanthorrhoea preissii, Calytrix fraseri, Mesomelaena pseudostygia* and *Desmocladus flexuosus.* The soil type is dark grey-brown sand. Quadrats EW 1 and 3 are representative of this vegetation type. The total area on site is 3.859ha	
EmAfBaBm *Eucalyptus marginata/ Allocasuarina fraseriana/Banksia menziesii/B. attenuata* Low Open Woodland over *Calytrix fraseri/ Xanthorrhoea preissii/Hibbertia hypericoides/Mesomelaena pseudostygia* Open Low Heath	Recorded in two separate locations on the site. Jarrah (*Eucalyptus marginata*) was common in this vegetation type but was mostly absent from the others. *Banksia attenuata, B. menziesii* and *Allocasuarina fraseriana* were also common with *B. prionotes* present in some areas. Common understorey species included *Calytrix fraseri, Xanthorrhoea preissii, Hibbertia hypericoides, Mesomelaena pseudostygia* and *Trachymene pilosa.* The soil type is dark orange-brown sand. Quadrats EW 2 and 6 are representative of this vegetation type. The total area on site is 7.090ha	

Vegetation Type	Description	Photographs
AfBaBm *Allocasuarina fraseriana/Banksia attenuata/B. menziesii* Low Open Woodland over *Calytrix fraseri/ Hibbertia hypericoides/Lyginia barbata/Mesomelaena pseudostygia* Closed Low Heath	Recorded through the central part of the site on three lots and very similar to the BaBmAf except that *Allocasuarina fraseriana* (Sheoak) is usually taller. Common understorey species included *Calytrix fraseri, Hibbertia hypericoides, Lyginia barbata, Mesomelaena pseudostygia* and *Eremaea pauciflora.* The soil type is orange-brown sand. Quadrats EW 4 and 5 are representative of this vegetation type. The total area on site is 7.428ha	
Af *Allocasuarina fraseriana* Low Open Woodland over weeds	One small area of this vegetation type was recorded at the southern end of Lot 62. *Allocasuarina fraseriana* trees were up to 6m high with only a few *Banksia attenuata* trees. The understorey was mainly Perennial Veldtgrass (*Ehrharta calycina*). The soil type is light orange-brown sand. No quadrat was sampled in this small Degraded area. The total area on site is 0.457ha	

3.5.3 Floristic Community Type

Floristic Community Types (FCT) are based on the whole floristic composition of the vegetation rather than being determined by soil type and geomorphology (Vegetation Complexes) or the nature of the dominant species (Vegetation Association). Many of the Threatened and Priority Ecological Community Types on the Swan Coastal Plain are based on FCTs.

The six quadrats were provided to Plantecology Consulting for computer analysis to determine the FCT of each quadrat. The location of the quadrats is shown in Figure 3. The results of the analysis are provided in Table 6 and the full report is in Appendix 8.

The results of the numerical analysis indicated that the vegetation on the site is most likely corresponds to SCP 28 'Spearwood *Banksia attenuata* or *Banksia attenuata – Eucalyptus marginata* woodlands'. Plantecology concluded that is it less likely that SCP 20a occurs on the site. The result for Quadrat EW 4 was SCP 6 'Weed dominated wetlands on heavy soils' which appears to be an error as the quadrat only contains 6 weeds out of 36 species recorded and the site is not a wetland on heavy soils.

Table 6: Floristic Community Type Analysis

Quadrat	FCT Assigned	Conservation Status State	Conservation Status EPBC Act
EW1, 2, 3, 5 and 6	SCP28 – Spearwood *Banksia attenuata* or *Banksia attenuata – Eucalyptus marginata* woodlands	Not listed (Part of Banksia WL SCP – Priority 3	Part of the Endangered Banksia WL SCP
EW4	SCP6 – Weed dominated wetlands on heavy soils	Not Listed	Not Listed

3.5.4 Vegetation Condition

The condition of the vegetation was assessed according to the system of Keighery as described in Bush Forever (Government of Western Australia, 2000) (Table 7).

Table 7: Vegetation Condition Rating Scale

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate to it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.

Condition	Description
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000

The vegetation condition was mostly rated as Very Good with areas of Good and Degraded (Figure 4). Some parkland cleared areas with native trees over weeds were rated as Completely Degraded.

3.6 Conservation Significance of Flora and Vegetation

3.6.1 Flora

No Threatened or Priority flora species were recorded on the site.

3.6.2 Vegetation

Vegetation Complex

The vegetation on the site is part of the Karrakatta Complex Central and South. There is approximately 23.49% of the Karrakatta Complex Central and South remaining on the Swan Coastal Plain based on the pre-European extent with 3.87% in secure tenure (DBCA, 2018).

The vegetation complex is above the EPA's objective of retaining at least 10% of each vegetation complex within the Perth Metropolitan Region. However, the amount of the vegetation complex in secure reserves is very low.

Threatened and Priority Ecological Communities

Threatened and Priority Ecological Communities (TECs and PECs) on the Swan Coastal Plain portion of the Perth Metropolitan Region are predominantly based on Floristic Community Types (FCTs). FCTs were initially described by Gibson *et al.* (1994) and subsequently assessed by others as either common or of some conservation significance such as a TEC or PEC.

The FCT analysis concluded that SCP 28 is the most likely FCT on the site. SCP 28 is not itself a TEC or PEC. However, FCT 28 is part of the Banksia Woodlands of the Swan Coastal Plain ecological community which is Priority 3 in Western Australia and an Endangered TEC at the Federal level.

Banksia Woodlands of the Swan Coastal Plain TEC

The Banksia Woodlands of the Swan Coastal Plain Threatened Ecological Community (Banksia WL SCP TEC) is listed as an Endangered TEC under the Commonwealth EPBC Act. The Banksia Woodland community is a conglomerate of a number of Banksia-dominated FCTs recognised at State level. FCT 28 is one of the FCTs that form part of the Banksia Woodland TEC. However, the identification of one

of the relevant FCTs on a site is not of itself sufficient to assign the vegetation to the Banksia Woodland TEC. The vegetation needs to meet specific criteria to be considered the TEC as follows.

The *Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community* (Conservation Advice) describes the Banksia Woodland TEC as follows:

> *The ecological community is a woodland associated with the Swan Coastal Plain of southwest Western Australia. A key diagnostic feature is a prominent tree layer of Banksia, with scattered eucalypts and other tree species often present among or emerging above the Banksia canopy. The understorey is a species rich mix of sclerophyllous shrubs, graminoids and forbs. The ecological community is characterised by a high endemism and considerable localised variation in species composition across its range*.

Table 8 assesses the vegetation type on the site against the Banksia Woodland TEC criteria contained in the Conservation Advice.

In summary, the vegetation types in Good and Very Good condition meet the requirements of the Banksia Woodland TEC. The location of the Banksia Woodland TEC is shown in Figure 5. The total area of Banksia Woodland TEC is 13.352ha.

Table 8: Assessment of the Banksia Woodland of the Swan Coastal Plain TEC.

Feature	Characteristic	Vegetation Type BaBmAf, AfBaBm and EmAfBaBm
Banksia Species	The patch must include at least one of the following diagnostic species: • *Banksia attenuata* (Candlestick Banksia) • *Banksia menziesii* (Firewood Banksia) • *Banksia prionotes* (Acorn Banksia) • *Banksia ilicifolia* (Holly-Leaved Banksia).	All three vegetation types contain at least *Banksia attenuata, B. menziesii* and/or *B. prionotes*.
Vegetation Structure	• A distinctive upper sclerophyllous layer of low trees (occasionally large shrubs more than 2 m tall), typically dominated or codominated[3] by one or more of the *Banksia* species (*B. attenuata, B. menziesii, B. ilicifolia, B. prionotes*); • An emergent tree layer of medium or tall (>10 m) height *Eucalyptus* or *Allocasuarina* (Sheoak) species may sometimes be present above the *Banksia* canopy. • An understory that is often highly species-rich consists of: – A layer of sclerophyllous shrubs of various heights; and, – A herbaceous ground layer of cord rushes, sedges and perennial and ephemeral forbs, that sometimes includes grasses. The development of a ground layer may vary depending on the density of the shrub layer and disturbance history.	• Banksia trees form a distinctive upper layer of low trees on the site. • Jarrah and Sheoak are present and are co-dominant in all vegetation types. • Understorey of shrubs, sedges, herbs, mostly in Very Good condition with a moderate to high diversity of native species • Some patches are in Good or Degraded condition.
Vegetation Condition	An area of Banksia woodland needs to be at least in Good condition to be considered the TEC.	Most of the vegetation is in Good and Very Good condition with a small areas of Degraded. The Degraded areas do not form part of the Banksia Woodland TEC
Patch Size	The Banksia woodland TEC needs to meet a minimum 'patch' size depending on its condition to qualify as the TEC, as follows: • 'Pristine' – no minimum patch size • 'Excellent' – 0.5ha • 'Very Good' – 1ha • 'Good' – 2ha	Three patches of Banksia Woodland are mapped on the site. The size of each patch is: – Northern – 3.1ha – Central – 8.6ha – Eastern – 1.7ha Based on the average condition of each patch being Very Good, all patches are above the minimum size criteria.
Conclusion		Areas shown on Figure 5 on Lots 29, 30, 40, 42 and 43 Elliott Road and Lot 62 Nicholas Road are representative of the Banksia Woodland TEC

4 FAUNA

4.1 Methodology

A Basic Fauna Survey was undertaken in accordance with EPA Technical Guidance *Fauna Surveys for Environmental Impact Assessment* (EPA, 2020). Desktop studies were undertaken to identify habitats and potential threatened species that may occur on the site. Searches of the following databases were undertaken prior to the site survey:

- DBCA Threatened and Priority Fauna Database (Appendix 9) for a radius of 20 km that provides a list of Threatened and Priority species recorded in the area;
- Atlas of Living Australia (ALA, 2022) (Appendix 2) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2022) (Appendix 3) which identifies species that are listed as Endangered, Threatened or Priority under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) could potentially have habitat within a 5km radius of the site.

A site reconnaissance survey was conducted by PGV Environmental on 26 and 30 September 2022. The inspection included traversing the site on foot.

4.2 Desktop Studies

The fauna species identified in the DBCA Database (Appendix 9), Atlas of Living Australia database (Appendix 2) and the EPBC Act Protected Matters Search Tool (Appendix 3) are listed in Table 9.

Table 9: List of Fauna Species Identified from Fauna Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Bettongia penicillata ogilbyi (Listed as *Bettongia penicillata* under the EPBC Act)	Woylie, Brush-tailed Bettong	Schedule 1 - CR	Endangered
Calidris ferruginea	Curlew Sandpiper	Schedule 1 - CR	Critically Endangered
Calidris tenuirostris	Great Knot	Schedule 1 - CR	Marine/ Migratory
Hesperocolletes douglasi	Douglas's Broad-headed Bee	Schedule 1 - CR	Critically Endangered
Numenius madagascariensis	Eastern Curlew	Schedule 1 - CR	Critically Endangered
Pseudemydura umbrina	Western Swamp Tortoise	Schedule 1 - CR	Critically Endangered
Botaurus poiciloptilus	Australasian bittern	Schedule 2 - EN	Endangered
Calidris canutus	Red Knot	Schedule 2 - EN	Marine/ Migratory
Calyptorhynchus (Zanda) baudinii	Baudin's Black Cockatoo	Schedule 2 - EN	Endangered
Calyptorhynchus (Zanda) latirostris	Carnaby's Black Cockatoo	Schedule 2 - EN	Endangered

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Myrmecobius fasciatus	Numbat, Walpurti	Schedule 2 - EN	Endangered
Petrogale lateralis lateralis	Black-flanked Rock-wallaby, Black-footed Rock-wallaby, Moororong	Schedule 2 - EN	Vulnerable
Rostratula australis (Rostratula benghalensis australis)	Australian Painted Snipe	Schedule 2 - EN	Endangered Marine/ Migratory
Thalassarche carteri (Thalassarche chlororhynchos carteri)	Indian yellow-nosed Albatross	Schedule 2 - EN Schedule 5 - IA	Marine/Migratory
Calyptorhynchus banksii naso	Forest Red-tailed Black-Cockatoo	Schedule 3 - VU	Vulnerable
Dasyurus geoffroii	Chuditch, Western Quoll	Schedule 3 - VU	Vulnerable
Falco hypoleucos	Grey Falcon	Schedule 3 - VU	Vulnerable
Leipoa ocellata	Mallee Fowl	Schedule 3 - VU	Vulnerable
Macroderma gigas	Ghost Bat	Schedule 3 - VU	Vulnerable
Macrotis lagotis	Bilby, Dalgyte, Ninu	Schedule 3 - VU	Vulnerable
Phascogale tapoatafa kimberleyensis	Kimberley brush-tailed phascogale	Schedule 3 - VU	
Procellaria aequinoctialis	White-chinned Petrel	Schedule 3 - VU	
Sternula nereis nereis (Sterna nereis nereis)	Australian Fairy Tern	Schedule 3 - VU	Vulnerable
Westralunio carteri	Carter's Freshwater Mussel	Schedule 3 - VU	Vulnerable
Charadrius leschenaultii	Greater Sand Plover	Schedule 3 - VU Schedule 5 - IA	Marine/ Migratory
Thalassarche cauta	Shy Albatross	Schedule 3 - VU Schedule 5 - IA	Endangered
Bettongia lesueur graii	Boodie (inland), Burrowing Bettong (inland)	Schedule 4 - EX	Extinct
Actitis hypoleucos	Common Sandpiper	Schedule 5 - IA	Marine/ Migratory
Apus pacificus	Fork-tailed Swift	Schedule 5 - IA	Marine/Migratory
Calidris acuminata	Sharp-tailed Sandpiper	Schedule 5 - IA	Marine/ Migratory
Calidris alba	Sanderling	Schedule 5 - IA	Marine/ Migratory
Calidris melanotos	Pectoral Sandpiper	Schedule 5 - IA	Marine/ Migratory
Calidris ruficollis	Red-necked Stint	Schedule 5 - IA	Marine/ Migratory
Calidris subminuta	Long-toed Stint	Schedule 5 - IA	Marine/ Migratory
Calonectris leucomelas	Streaked Shearwater	Schedule 5 - IA	Marine/ Migratory
Chlidonias leucopterus (Sterna leucoptera)	White-winged Black tern, White-winged Tern	Schedule 5 - IA	Marine/ Migratory

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Glareola maldivarum	Oriental Pratincole	Schedule 5 - IA	Marine/ Migratory
Hydroprogne caspia (Sterna caspia)	Caspian Tern	Schedule 5 - IA	Marine/ Migratory
Limosa lapponica	Bar-tailed Godwit	Schedule 5 - IA	Marine/ Migratory
Limosa limosa	Black-tailed Godwit	Schedule 5 - IA	Migratory/ Marine
Macronectes giganteus	Southern Giant Petrel	Schedule 5 - IA	Endangered/ Migratory/ Marine
Motacilla cinerea	Grey Wagtail	Schedule 5 - IA	Migratory/ Marine
Pandion cristatus (Pandion haliaetus)	Osprey	Schedule 5 - IA	Marine/ Migratory
Plegadis falcinellus	Glossy Ibis	Schedule 5 - IA	Marine/Migratory
Pluvialis fulva	Pacific Golden Plover	Schedule 5 - IA	Marine/ Migratory
Pluvialis squatarola	Grey Plover	Schedule 5 - IA	Marine/ Migratory
Thalasseus bergii (Sterna bergii)	Crested Tern	Schedule 5 - IA	Marine/ Migratory
Tringa glareola	Wood Sandpiper	Schedule 5 - IA	Marine/ Migratory
Tringa nebularia	Common Greenshank	Schedule 5 - IA	Marine/ Migratory
Tringa stagnatilis	Marsh Sandpiper, Little Greenshank	Schedule 5 - IA	Marine/ Migratory
Cacatua pastinator pastinator	Muir's Corella	Schedule 6 - CD	Vulnerable
Phascogale calura	Red-tailed Phascogale, Kenngoor	Schedule 6 - CD	Endangered
Phascogale tapoatafa wambenger	South-western Brush-tailed Phascogale, Wambenger	Schedule 6 - CD	
Falco peregrinus	Peregrine Falcon	Schedule 7 - OS	Marine/ Migratory
Ardea alba	Great Egret, White Egret		Marine
Ardea ibis (Bubulcus ibis)	Cattle Egret		Marine
Charadrius ruficapillus	Red-capped Plover		Marine
Egretta sacra	Eastern Reef Egret, Eastern Reef Heron		Marine
Haliaeetus leucogaster	White-bellied Sea-eagle		Marine
Halobaena caerulea	Blue Petrel		Vulnerable/ Marine
Himantopus himantopus	Black-winged Stilt		Marine
Larus pacificus	Pacific Gull		Marine
Merops ornatus	Rainbow Bee-eater		Marine
Pterodroma mollis	Soft-plumaged Petrel		Vulnerable /Marine
Raillus philippensis Gallirallus philippensis)	Buff banded rail		Marine

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
Recurvirostra novaehollandiae	Red-necked Avocet		Marine/ Migratory
Ixobrychus flavicollis australis (southwest subpop.)	Australian Black Bittern (southwest pop)	Priority 1	
Austrosaga spinifer	Spiny Katydid (Swan Coastal Plain)	Priority 2	
Australotomurus morbidus	Cemetery Springtail, Guildford Springtail	Priority 3	
Ctenotus gemmula (Swan Coastal Plain pop)	Jewelled South-west Ctenotus	Priority 3	
Hylaeus globuliferus	Woolybush Bee	Priority 3	
Idiosoma sigillatum	Swan Coastal Plain shield-backed trapdoor spider	Priority 3	
Leioproctus contrarius	A Short-tongued Bee	Priority 3	
Neelaps calonotos	Black-striped Snake	Priority 3	
Ninox connivens connivens	Barking Owl (southwest pop)	Priority 3	
Elanus scriptus	Letter-winged Kite	Priority 4	
Hydromys chrysogaster	Water-rat, Rakali	Priority 4	
Isoodon fusciventer	Southern Brown Bandicoot, Quenda	Priority 4	
Ixobrychus dubius	Australian Little Bittern	Priority 4	
Notamacropus eugenii derbianus	Tammar Wallaby	Priority 4	
Notamacropus irma	Western Brush Wallaby	Priority 4	
Oxyura australis	Blue-billed Duck	Priority 4	
Synemon gratiosa	Graceful Sun-moth	Priority 4	
Thinornis rubricollis (Charadrius rubricollis)	Hooded Plover	Priority 4	Marine

Fauna are classified under five different Priority codes and rare and endangered fauna are classified under the *Wildlife Conservation (Specially Protected Fauna) Notice 2014* into five schedules of taxa. These are outlined in Appendix 4.

4.3 Fauna Habitat

There are two fauna habitat occurs on the Lots, described as Open Woodland Habitat (Plate 7) and Cleared/Developed Habitat (Plate 8).

Plate 7: Open Woodland Fauna Habitat

Plate 8: Cleared/Developed Fauna Habitat

Fauna habitat can be assessed using a number of factors including, the size of the habitat, the level of habitat connectivity, availability of specific resources (e.g. tree hollows) and overall vegetation quality. The habitat was assessed according to the categories outlined in Table 10.

Table 10: Fauna Habitat Quality

Fauna Habitat Quality	Description
High Quality Fauna Habitat	These areas closely approximate the vegetation mix and quality that would have been in the area prior to any disturbance. The habitat has connectivity with other habitats and is likely to contain the most natural vertebrate fauna assemblage.
Very Good Fauna Habitat	These areas show minimal signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) and generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be minimally affected by disturbance.
Good Fauna Habitat	These areas showed signs of disturbance (e.g. grazing, clearing, fragmentation, weeds) but generally retain many of the characteristics of the habitat if it had not been disturbed. The habitat has connectivity with other habitats and fauna assemblages in these areas are likely to be affected by disturbance.
Disturbed Fauna Habitat	These areas showed signs of significant disturbance. Many of the trees, shrubs and undergrowth are cleared. These areas may be in the early succession and regeneration stages. Areas may show signs of significant grazing, contain weeds or have been damaged by vehicle or machinery. Habitats are fragmented or have limited connectivity with other fauna habitats. Fauna assemblages in these areas are likely to differ significantly from what might be expected in the area had the disturbance not occurred.
Highly Degraded Fauna Habitat	These areas often have a significant loss of vegetation, an abundance of weeds, and a large number of vehicle tracks or are completely cleared. Limited or no fauna habitat connectivity. Faunal assemblages in these areas are likely to be significantly different to what might have been in the area pre-disturbance (Coffey Environments, 2009).

The fauna habitats occur over a fragmented landscape. The open Woodland habitat is in varied condition with some larger areas being Very Good and have some connectivity to adjacent lots. However, the surrounding development and presence of feral species would have impacted on the fauna assemblage. These areas are rated as being Good Fauna Habitat.

There is one small, Completely Degraded area that has no connectivity which is Highly Degraded Fauna Habitat in Lot 3 Elliot Road. The Cleared/Developed habitat is also considered to be Highly Degraded Fauna Habitat.

4.4 Conservation Significant Species

Outlined below in Table 11 is a short description of the preferred habitat for each of the species that were identified in the DBCA Database Search (Appendix 8), Atlas of Living Australia Species Report (Appendix 2) and the EPBC Protected Matters Search Tool (Appendix 3) in Table 9. The preferred habitat has been compared to the habitats on the site described above and the likelihood of each species to be present was determined. Species that live in the ocean have not been included.

Table 11: Preferred Habitat of Conservation Significant Fauna Species

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Schedule 1 – Critically Endangered			
Bettongia penicillata ogilbyi (Bettongia penicillata)	Woylie, Brush-tailed Bettong	The Woylie habitat types ranged from forest to grassland, coastal and inland. During the day the Woylie shelters under patches of dense undergrowth, logs and rock-cavities and occasionally in burrows.	Highly Unlikely – the fauna habitat is too disturbed and surrounded by development
Calidris ferruginea	Curlew Sandpiper	Curlew Sandpipers mainly occur on intertidal mudflats in sheltered coastal areas, such as estuaries, bays, inlets and lagoons, and also around non-tidal swamps, lakes and lagoons near the coast, and ponds in saltworks and sewage farms.	Highly Unlikely – not suitable habitat
Calidris tenuirostris	Great Knot	The Great Knot winters in Australia, occurring in sheltered coastal habitats such as inlets, bays, harbours, estuaries and lagoons with large intertidal mud and sandflats, oceanic sandy beaches with nearby mudflats, sandy spits and islets, muddy shorelines with mangroves and occasionally exposed reefs or rock platforms. It roosts in refuges such as shallow water in sheltered sites, on coastal dunes or on saltflats amongst mangroves during high tides (BirdLife International, 2015a).	Highly Unlikely – not suitable habitat
Hesperocolletes douglasi	Douglas's Broad-headed Bee	Douglas's Broad-headed Bee was recorded on Rottnest and rediscovered in Pinjar in Banskia Woodland with pollen from *Philotheca spicata*, *Patersonia occidentalis*, two species of *Stylidium*, a species of *Scaevola* and species from Fabaceae and Myrtaceae (DBCA, 2018).	Unlikely – the sites are disturbed and
Numenius madagascariensis	Eastern Curlew	The Eastern Curlew is most commonly associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass. Occasionally, the species occurs on ocean beaches (often near estuaries), and coral reefs, rock platforms, or rocky islets.	Highly Unlikely – not coastal habitat
Pseudemydura umbrina	Western Swamp Tortoise	The Western Swamp Tortoise is restricted to very few wild populations. During winter and spring, the tortoises live in the water. This species is carnivorous feeding on insects, larvae and tadpoles (Burbidge and Kuchling, 1994). In the drier, hotter months they shelter under leaf litter and in holes and aestivate (sleep).	No – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Botaurus poiciloptilus	Australasian bittern	The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands.	No – not wetland habitat
Pseudocheirus occidentalis	Western Ringtail Possum, Ngwayir	The Western Ringtail Possum is a medium sized nocturnal marsupial. This species occurs in and near coastal Peppermint Tree (*Agonis flexuosa*) forest and Tuart (*Eucalyptus gomphocephala*) dominated forest with a Peppermint Tree understorey.	Highly Unlikely – not suitable habitat
Schedule 2 – Endangered			
Botaurus poiciloptilus	Australasian bittern	The Australasian Bittern occurs mainly in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands.	Highly Unlikely – not suitable habitat
Calidris canutus	Red Knot	In Australasia the Red Knot mainly inhabit intertidal mudflats, sandflats and sandy beaches of sheltered coasts, in estuaries, bays, inlets, lagoons and harbours; sometimes on sandy ocean beaches or shallow pools on exposed wave-cut rock platforms or coral reefs.	Highly Unlikely – not suitable habitat
Calyptorhynchus (Zanda) baudinii	Baudin's Black Cockatoo	Baudin's Black-Cockatoo mainly occurs in eucalypt forests, especially Jarrah (*Eucalyptus marginata*), Marri (*Corymbia calophylla*), also Karri (*Eucalyptus diversicolor*) forest, often feeding in the understorey on proteaceous trees and shrubs, especially banksias (SEWPaC, 2012).	Possible intermittent visitor to the site
Calyptorhynchus (Zanda) latirostris	Carnaby's Black Cockatoo	Carnaby's Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of Banksia, Hakea, Eucalyptus, Grevillea, Pinus and Allocasuarina spp. It is nomadic often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 – 12m above the ground and have an entrance 23-30cm with a depth of 1-2.5m. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell) (SEWPaC, 2012).	Likely to intermittently occur on the site
Myrmecobius fasciatus	Numbat, Walpurti	Numbats occur in eucalypt forests and woodlands dominated by *Eucalyptus marginata, Corymbia calophylla* and *Eucalyptus wandoo*.	Highly Unlikely – the site is too disturbed
Petrogale lateralis lateralis	Black-flanked Rock-wallaby, Black-footed Rock-wallaby, Moororong	The preferred habitat of the Black-flanked Rock-wallaby varies between colonies but always involves grassland feeding habitat for feeding in close proximity to cliff, rock-pile, talus or escarpment refuge habitat.	Highly Unlikely – outside of species range

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Rostratula australis (Rostratula benghalensis australis)	Australian Painted Snipe	The Australian Painted Snipe has been recorded at wetlands in all states of Australia but is most common in eastern Australia. It generally inhabits shallow terrestrial freshwater (occasionally brackish) wetlands, including temporary and permanent lakes, swamps and claypans. It also uses inundated or waterlogged grassland or saltmarsh, dams, rice crops, sewage farms and bore drains. Typical sites include a cover of vegetation, including grasses.	Highly Unlikely – not suitable habitat
Thalassarche carteri (Thalassarche chlororhynchos carteri)	Indian yellow-nosed Albatross	The Indian Yellow-nosed Albatross is a marine bird that breeds on islands of the southern Indian Ocean on tussock-covered coastal cliffs and slopes, often in rocky situations.	Highly Unlikely – marine and pelagic
Schedule 3 – Vulnerable			
Calyptorhynchus banksii naso	Forest Red-tailed Black-Cockatoo	Forest Red-tailed Black Cockatoos frequent the humid to sub-humid south-west of Western Australia from Gingin in the north, to Albany in the south and west to Cape Leeuwin and Bunbury (SEWPaC, 2012). It nests in tree hollows with a depth of 1-5m, that are predominately Marri (Corymbia calophylla), Jarrah (Eucalyptus marginata) and Karri (Eucalyptus diversicolor) and it feeds primarily on the seeds of Marri.	Likely to be an intermittent visitor to the site
Charadrius leschenaultii	Greater Sand Plover	In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons.	Highly Unlikely – not coastal habitat
Dasyurus geoffroii	Chuditch, Western Quoll	The Chuditch have been known to occupy a wide range of habitats including woodlands, dry sclerophyll forests, riparian vegetation, beaches and deserts. They are opportunistic feeders, and forage on the ground at night, feeding on invertebrates, small mammals, birds and reptiles.	Highly Unlikely – the site is too disturbed and surrounded by development
Falco hypoleucos	Grey Falcon	The Grey Falcon favours timbered lowland plains, particularly acacia shrublands that are crossed by tree-lined watercourses, but frequents other grassland and woodland habitats (Birdlife International, 2014a).	Highly Unlikely – not suitable habitat
Leipoa ocellata	Mallee Fowl	Mallee fowl have been found in mallee regions of southern Australia from approximately the 26th parallel of latitude southwards in mallee bushland.	No – no mallee habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Macroderma gigas	Ghost Bat	Ghost bats occur in a wide range of habitats from rainforest, monsoon and vine scrub, to open woodlands in arid areas. These habitats are used for foraging, while roost habitat is more specific. Favoured roosting sites of the ghost bat are undisturbed caves or mineshafts which have several openings (DEHP, 2015).	No - no cave habitat
Macrotis lagotis	Bilby, Dalgyte, Ninu	The greater Bilby is a nocturnal omnivorous marsupial that shrub species, such as *Acacia kempeana* and *A. hilliana*, which have root-dwelling larvae that provide a constant food source for the Greater Bilby. They also utilise Spinifex hummocks which are quite uniform and discrete, providing runways between hummocks, enabling easier movement and for aging.	Highly Unlikely – not suitable habitat
Phascogale tapoatafa kimberleyensis	Kimberley brush-tailed phascogale	The Kimberley Brush-tailed Phascogale occurs in savanna woodland. It is octurnal and shelters in tree hollows during the day.	No – outside of species range
Procellaria aequinoctialis	White-chinned Petrel	The White Chinned Petrel occurs on the southern coast of Australia and largely forage on open water (Birdlife International, 2016).	Highly Unlikely – marine and pelagic
Sternula nereis nereis (Sterna nereis nereis)	Australian Fairy Tern	The Fairy Tern (Australian) nests on sheltered sandy beaches, spits and banks above the high tide line and below vegetation.	Highly Unlikely – not beach habitat
Westralunio carteri	Carter's Freshwater Mussel	Carter's Feshwater Mussel is South-West Western Australia's only freshwater mussel (Murdoch University & SERCUL, 2012). Carter's Freshwater Mussel occurs in freshwater streams, rivers, reservoirs and lakes (ICUN, 2015b) and is intolerant to dehydration for more than three days and salinity (Murdoch University & SERCUL, 2012).	No – not suitable habitat
Schedule 3 – Vulnerable and Schedule 5 – International Agreement			
Charadrius leschenaultii	Greater Sand Plover	In Australasia, the Greater Sand Plover is almost entirely coastal, inhabiting littoral and estuarine habitats. They mainly occur on sheltered sandy, shelly or muddy beaches with large intertidal mudflats or sandbanks, as well as sandy estuarine lagoons.	Highly Unlikely – not coastal habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Thalassarche cauta	Shy Albatross	The Shy Albatross is a marine species occurring in subantarctic and subtropical waters, reaching the tropics in the cool Humboldt Current off South America. In the southern Indian Ocean the species has been observed over waters of 6.4-13.5°C. It has been noted in shelf-waters around breeding islands and over adjacent rises. During the non-breeding season, it occurs over continental shelves around continents. The species occurs both inshore and offshore and enters harbours and bays. The birds are scarce in pelagic waters. The species flies low to moderately high, using updraft from wave fronts for lift. It nests on level or gently sloping ledges, summits, slopes and caves of rocky islets and stacks, usually in broken terrain with little soil and vegetation.	Highly Unlikely – marine and pelagic
Schedule 4 – Extinct			
Bettongia lesueur graii	Boodie (inland), Burrowing Bettong (inland)	The habitat of the Burrowing Bettong (inland) ranged from open eucalypt or acacia woodland with a grass and shrub understorey to sandridge desert with spinifex hummocks and sparse shrubs.	
Schedule 5 – International Agreement			
Actitis hypoleucos	Common Sandpiper	The Common Sandpiper is mostly found around muddy margins or rocky shores. Generally the species forages in shallow water and on bare soft mud at the edges of wetlands.	Highly Unlikely – not suitable habitat
Apus pacificus	Fork-tailed Swift	The Fork-tailed Swift is almost exclusively aerial and is not known to breed in Australia. They are seen in inland plains but sometimes above foothills or in coastal areas. They often occur over cliffs and beaches and also over islands and sometimes well out to sea. They also occur over settled areas, including towns, urban areas and cities. Apus pacificus subsp. pacificus is the only subspecies to migrate to Australia.	Highly Unlikely – may fly over the site but unlikely to land
Calidris acuminata	Sharp-tailed Sandpiper	The Sharp-tailed Sandpiper prefers muddy edges of shallow fresh or brackish wetlands, with inundated or emergent sedges, grass, saltmarsh or other low vegetation.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Calidris alba	Sanderling	Sanderlings occur on most of the coast from Eyre to Derby, and also around Wyndham. They are more often recorded on the south and southwest coasts, north to around southern Shark Bay, with more sparsely scattered records further north in Gascoyne and Pilbara Regions and the Kimberley Division.	Highly Unlikely – not coastal habitat
Calidris melanotos	Pectoral Sandpiper	The Pectoral Sandpiper prefers shallow fresh to saline wetlands and is found at coastal lagoons, estuaries, bays, swamps, lakes, inundated grasslands, saltmarshes, river pools, creeks, floodplains and artificial wetlands.	Highly Unlikely – not suitable habitat
Calidris ruficollis	Red-necked Stint	The Red-necked Stint is mostly found in coastal areas, including in sheltered inlets, bays, lagoons and estuaries with intertidal mudflats, often near spits, islets and banks and, sometimes, on protected sandy or coralline shores.	Highly Unlikely – not coastal habitat
Calidris subminuta	Long-toed Stint	The Long-toed Stint prefers shallow freshwater or brackish wetlands including lakes, swamps, river floodplains, streams, lagoons and sewage ponds. The species is also fond of areas of muddy shoreline, growths of short grass, weeds, sedges, low or floating aquatic vegetation, reeds, rushes and occasionally stunted samphire.	Highly Unlikely – not suitable habitat
Calonectris leucomelas	Streaked Shearwater	The Streaked Shearwater is a marine species that can be found over both pelagic and inshore waters (Birdlife International, 2014b).	Highly unlikely – marine and pelagic
Chlidonias leucopterus (Sterna leucoptera)	White-winged Black tern, White-winged Tern	In Australia, the White-winged Black tern mostly inhabits fresh, brackish or saline, and coastal or subcoastal wetlands.	Highly Unlikely – not suitable habitat
Glareola maldivarum	Oriental Pratincole	The Oriental Pratincole usually inhabits open plains, floodplains or short grassland (including farmland or airstrips), often with extensive bare areas. They often occur near terrestrial wetlands, such as billabongs, lakes or creeks, and artificial wetlands such as reservoirs, saltworks and sewage farms, especially around the margins. The species also occurs along the coast, inhabiting beaches, mudflats and islands, or around coastal lagoons.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Hydroprogne caspia (Sterna caspia)	Caspian Tern	The Caspian Tern is mostly found in sheltered coastal embayments (harbours, lagoons, inlets, bays, estuaries and river deltas) and those with sandy or muddy margins are preferred.	Highly Unlikely – not coastal habitat
Limosa lapponica	Bar-tailed Godwit	The Bar-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays.	Highly Unlikely – not coastal habitat
Limosa limosa	Black-tailed Godwit	The Black-tailed Godwit is found mainly in coastal habitats such as large intertidal sandflats, banks, mudflats, estuaries, inlets, harbours, coastal lagoons and bays. It is found often around beds of seagrass and, sometimes, in nearby saltmarsh.	Highly Unlikely – not coastal habitat
Macronectes giganteus	Southern Giant Petrel	The Southern Giant-Petrel is a marine bird that occurs in Antarctic to subtropical waters. In summer it mainly occurs over Antarctic waters	Highly Unlikely – marine and pelagic
Motacilla cinerea	Grey Wagtail	The Grey Wagtail is mostly recorded in coastal areas in Western Australia (ALA, 2015) however is widespread. There is non-breeding habitat only in Australia and the species has a strong association with water, particularly rocky substrates along water courses but also lakes and marshes.	Highly Unlikely – not suitable habitat
Numenius phaeopus	Whimbrel	The Whimbrel is often found on the intertidal mudflats of sheltered coasts. It is also found in harbours, lagoons, estuaries and river deltas, often those with mangroves, but also open, un-vegetated mudflats.	Highly Unlikely – not suitable habitat
Pandion cristatus (Pandion haliaetus)	Osprey	Ospreys occur in littoral and coastal habitats and terrestrial wetlands of tropical and temperate Australia and offshore islands. They feed on fish, especially mullet where available, and rarely take molluscs, crustaceans, insects, reptiles, birds and mammals.	Highly Unlikely – not coastal habitat
Plegadis falcinellus	Glossy Ibis	The Glossy Ibis is the smallest ibis known in Australia. This species preferred habitat for foraging and breeding are fresh water marshes at the edges of lakes and rivers, lagoons, flood-plains, wet meadows, swamps, reservoirs, sewage ponds, rice-fields and cultivated areas under irrigation but do not breed in South-west Western Australia.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Pluvialis fulva	Pacific Golden Plover	Pacific Golden Plovers usually occur on beaches, mudflats and sandflats (sometimes in vegetation such as mangroves, low saltmarsh such as Sarcocornia, or beds of seagrass) in sheltered areas including harbours, estuaries and lagoons, and also in evaporation ponds in salt works.	Highly Unlikely – not suitable habitat
Pluvialis squatarola	Grey Plover	Grey Plovers occur almost entirely in coastal areas, where they usually inhabit sheltered embayments, estuaries and lagoons with mudflats and sandflats, and occasionally on rocky coasts with wave-cut platforms or reef-flats, or on reefs within muddy lagoons.	Highly Unlikely – not coastal habitat
Thalasseus bergii (Sterna bergii)	Crested Tern	The Crested Tern occurs in coastal areas (Birdlife Australia, 2018).	Highly Unlikely – not coastal habitat
Tringa glareola	Wood Sandpiper	The Wood Sandpiper uses well-vegetated, shallow, freshwater wetlands, such as swamps, billabongs, lakes, pools and waterholes. They are typically associated with emergent, aquatic plants or grass, and dominated by taller fringing vegetation, such as dense stands of rushes or reeds, shrubs, or dead or live trees, especially Melaleuca and River Red Gums Eucalyptus camaldulensis and often with fallen timber.	Highly Unlikely – not suitable habitat
Tringa nebularia	Common Greenshank	The Common Greenshank is a wader and does not breed in Australia. This species can be found in many types of wetlands and has the widest distribution of any shorebird in Australia. This species typically feeds on molluscs, crustaceans, insects, and occasionally fish and frogs.	Highly Unlikely – not suitable habitat
Tringa stagnatilis	Marsh Sandpiper, Little Greenshank	The Marsh Sandpiper lives in permanent or ephemeral wetlands of varying salinity, including swamps, lagoons, billabongs, saltpans, saltmarshes, estuaries, pools on inundated floodplains, and intertidal mudflats and also regularly at sewage farms and saltworks.	Highly Unlikely – not suitable habitat
Schedule 6 – Conservation Dependent			
Cacatua pastinator pastinator	Muir's Corella	Muir's Corella occurs in eucalyptus woodlands that are dominated by White Gum (*Eucalyptus wandoo*), Marri (*Corymbia calophylla*), or Jarrah (*Eucalyptus marginata*). The subspecies often occurs in farmland, especially in croplands and sometimes pasture, where there are ample watering points and some nearby large trees for roosting or breeding.	Highly Unlikely – generally occurs in the wheatbelt

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Phascogale calura	Red-tailed Phascogale, Kenngoor	The Red-tailed Phascogale is a small, arboreal, carnivorous marsupial. The preferred habitats for this species are *Allocasuarina* woodlands with hollow-containing eucalypts (e.g. *Eucalyptus wandoo*) and *Gastrolobium* spp..	Highly Unlikely – not suitable habitat and the site is too disturbed and outside of the species range
Phascogale tapoatafa wambenger	South-western Brush-tailed Phascogale, Wambenger	Southern Brush-tailed Phascogales are arboreal marsupials which require tree hollows in suitable woodland or forest and rely on abundant invertebrate prey to sustain populations (Pescott, 2012).	Highly Unlikely – not suitable habitat and the site is too disturbed
Schedule 7 – Other Specially Protected Species			
Falco peregrinus	Peregrine Falcon	The Peregrine Falcon is found in a variety of habitats but nests on high cliff ledges or artificial structures. It feeds primarily on small-medium sized birds, but occasionally taking insects, such as moths, cicadas and locusts (Birdlife Australia, 2012).	Highly Unlikely – may fly over but unlikely to land
Marine			
Ardea alba	Great Egret, White Egret	The Eastern Great Egret has been reported in a wide range of wetland habitats and usually frequents shallow waters. This species feeds on fish, insects, crustaceans, molluscs, frogs, lizards, snakes and small birds and mammals.	Highly Unlikely – not suitable habitat
Ardea ibis (Bubulcus ibis)	Cattle Egret	The Cattle Egret occurs in tropical and temperate grasslands, wooded lands and terrestrial wetlands with breeding in Western Australia recorded in the far north in Wyndham in colonies in wooded swamps such as mangrove forest. This species forages away from water on low lying grasslands, improved pastures and croplands generally in areas that have livestock eating insects, frog, lizards and small mammals.	Possible – habitat may occur on the site
Charadrius ruficapillus	Red-capped Plover	The Red-capped Plover is found in wetlands, especially in arid areas, and prefers saline and brackish waters (Birdlife Australia, 2014a).	Highly Unlikely – not suitable habitat
Egretta sacra	Eastern Reef Egret, Eastern Reef Heron	The Eastern Reef Egret nests in trees in island woodlands, or on the ground under shrubs or rock ledges and feeds on small fish, crustaceans and insects (Birdlife Australia, 2014b).	Highly Unlikely – not suitable habitat
Haliaeetus leucogaster	White-bellied Sea-eagle	The White-bellied Sea-Eagle is found in coastal habitats with large areas of open water, especially those close to the sea-shore. This species feeds opportunistically on a variety of fish, birds, reptiles, mammals and crustaceans, and on carrion and offal.	Highly Unlikely – not coastal habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Halobaena caerulea	Blue Petrel	The Blue Petrel breeds around MacQuarie Island and forages in Antarctic and subantarctic waters for pelagic crustaceans, fish, cephalopods and insects.	Highly Unlikely – marine and pelagic
Himantopus himantopus	Black-winged Stilt	The Black-winged Stilt is found near coastal lagoons and shallow freshwater or brackish pools with extensive areas of mudflats, salt meadows, saltpans, coastal marshes and swamps (Birdlife International, 2014c).	Highly Unlikely – not suitable habitat
Larus pacificus	Pacific Gull	Australia's largest gull, the Pacific Gull occurs only along the coasts of southern Australia. Despite its name, the species is seldom seen on the Pacific coastline, and is far more common on the beaches bordering the Southern and Indian Oceans. They breed in colonies on islands, extending from the Furneaux Group in eastern Bass Strait, west to Shark Bay. Their nests may consist of either a scrape in the ground, sometimes lined with gravel, or a neat nest made from grass, sticks or seaweed (Birdlife Australia, 2015).	Highly Unlikely – not suitable habitat
Merops ornatus	Rainbow Bee-eater	Populations of the Rainbow Bee-eater that breed in northern Australia are considered to be resident, and in many northern localities the Rainbow Bee-eater is present throughout the year. The Rainbow Bee-eater nests in a burrow dug in the ground. It is found across the better-watered parts of WA including islands preferring lightly wooded, sandy country near water.	Possible – habitat may occur on the site
Pterodroma mollis	Soft-plumaged Petrel	The Soft-plumaged Petrel is a marine, oceanic species that breed on islands off Tasmania, in the New Zealand region, and in the Indian and South Atlantic Oceans.	Highly Unlikely – marine and pelagic
Raillus philippensis (Gallirallus philippensis)	Buff banded rail	The Buff Banded Rail occupies a wide range of terrestrial wetlands, as well as coastal beaches, reef flats, sandbanks, and mangroves, where it forages on the ground, pecking and probing in mud to catch crustaceans, worms and other invertebrates, and rails on beaches may scavenge along the strandline (Birdlife Australia, 2017).	Highly Unlikely – not suitable habitat
Recurvirostra novaehollandiae	Red-necked Avocet	The Red-necked Avocet occurs in wetland areas including bogs, marshes, swamps and Permanent Saline, Brackish or Alkaline Lakes (Birdlife International, 2014d).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Priority 1			
Ixobrychus flavicollis australis (southwest subpop.)	Australian Black Bittern (southwest pop)	The bittern sub-species prefer wetland habitats with dense fringing vegetation. They are found in reed beds along water bodies. They inhabit ponds, lakes, streams and marshes. Their breeding habitat is mostly reed beds. The subspecies I. f. australis is distributed in New Guinea, Bismarck Archipelago and Australia (BirdLife International, 2015b).	Highly Unlikely – not wetland habitat
Priority 2			
Austrosaga spinifer	Spiny Katydid (Swan Coastal Plain)	The *Austrosaga spinifer* species of cricket is recorcded from Cervantes (Rentz, 1996) and Neerabup National Park.	Possible – habitat may occur on the site
Priority 3			
Australotomurus morbidus	Cemetery Springtail, Guildford Springtail	The Cemetery Springtail is known from four locations in Perth in relatively undisturbed bushland in pale soils in *Banksia* and *Eucalyptus* woodland (Greenslade and Jordan, 2014).	Highly Unlikely – the site is too disturbed
Ctenotus gemmula (Swan Coastal Plain pop)	Jewelled South-west Ctenotus	The Jewelled south-west Ctenotus inhabits sand plains with heaths. It is also found in Banksia or Mallee woodlands (ICUN, 2015).	Unlikely – not typical habitat
Euoplos inornatus	Inornate Trapdoor Spider (northern Jarrah Forest)	The Inornate Trapdoor Spider is recorded from clay creek banks (ALA, 2019).	Highly Unlikely – not suitable habitat
Hylaeus globuliferus	Woolybush Bee	The Woolybush Bee is thought to favour flowers of *Adenanthos cygnorum* for feeding, but has also been recorded on *Banksia attenuata*.	Possible – habitat occurs on the site
Idiosoma sigillatum	Swan Coastal Plain shield-backed trapdoor spider	The Swan Coastal Plain Shield-backed Trapdoor Spider arranges fallen twigs from the sheoak tree around the rim of its burrow entrance, enabling it to feel the vibrations of unsuspecting prey that wander by (Curtin, 2018).	Highly Unlikely – no Sheoak habitat
Leioproctus contrarius	A Short-tongued Bee	Leioproctus contrarius is apparently dependent on flowers of Goodeniaceae and possibly Lechenaultia stenosepala. It was found at Forrestdale Lake in 1952 and 1954 (PES, 2011).	Highly Unlikely – not suitable habitat
Neelaps calonotos	Black-striped Snake	The Black-striped snake has a limited distribution, inhabiting areas with sandy soils that support heathlands and Banksia/Eucalypt Woodlands (Nevill, 2005) on the Swan Coastal Plain generally in the lower west coast from Lancelin to Mandurah (Storr *et al*, 1999).	Highly Unlikely – not on the Swan Coastal Plain

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Ninox connivens connivens	Barking Owl (southwest pop)	Barking Owls are usually found in habitats that are dominated by eucalyptus species, particularly red gum, and, in the tropics, paperbark species. They prefer woodlands and forests with a high density of large trees and particularly sites with hollows that are used by the owls as well as their prey. Roost sites are often located near waterways or wetlands (Birds in Backyards, 2014).	Unlikely – not typical habitat
Priority 4			
Elanus scriptus	Letter-winged Kite	The Letter-winged Kite is found in open or sparsely wooded country (Johnstone and Storr, 1998).	Highly Unlikely – not suitable habitat
Hydromys chrysogaster	Water-rat, Rakali	The Water Rat generally prefers wetland habitats characterised by dense, low-lying vegetation (0–30 cm from ground), low-density canopy cover and shallow, narrow water bodies (Speldewinde *et al.*, 2013).	Highly Unlikely – not suitable habitat
Isoodon fusciventer	Southern Brown Bandicoot, Quenda	Southern Brown Bandicoots are small grey marsupials that prefer dense scrub (up to one metre high). Their diet includes invertebrates (including earthworms, adult beetles and their larvae), underground fungi, subterranean plant material, and very occasionally, small vertebrates (DEC, 2012b).	Possible intermittent visitor to the site
Ixobrychus dubius	Australian Little Bittern	The Australian Little Bittern is mainly found in freshwater wetlands, where they inhabit dense emergent vegetation of reeds and sedges, and inundated shrub thickets. They are also occasionally found in brackish and saline wetlands such as mangrove swamps, Juncus-dominated salt marsh and the wooded margins of coastal lagoons (Naturewatch NZ, 2014).	Highly Unlikely – not suitable habitat
Notamacropus eugenii derbianus	Tammar Wallaby	The Tammar Wallaby prefers dense, low vegetation for daytime shelter and open grassy areas for feeding. This species inhabits coastal scrub, heath, dry sclerophyll forest and thickets in mallee and woodland (DEC, 2012c).	Highly Unlikely – the site is too disturbed
Notamacropus irma	Western Brush Wallaby	The Western Brush Wallaby is a medium sized marsupial and its optimum habitat is open forest or woodland, particularly favouring open, seasonally wet flats with low grasses and open scrubby thickets (DEC, 2012d).	Highly Unlikely – the site surrounds are too developed

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Oxyura australis	Blue-billed Duck	The Blue-billed Duck is found on terrestrial wetlands in temperate regions, that are freshwater to saline, and may be natural or artificial. It nests in rushes, sedges, Lignum Muehlenbeckia cunninghamii and paperbark Melaleuca (Birdlife International, 2015c). The species is almost completely aquatic, and is seldom seen on land. Non-breeding flocks, often with several hundred individuals, congregate on large, deep open freshwater dams and lakes in autumn. The daylight hours are spent alone in small concealed bays within vegetation or communally in large exposed rafts far from the shore (Birds in Backyards, 2015).	No – not suitable habitat
Synemon gratiosa	Graceful Sun-moth	The Graceful Sun-moth is a diurnal moth with dull coloured brown to black forewings and brightly coloured orange hind wings. The larvae burrow into the rhizomes of Lomandra maritima and Lomandra hermaphrodita exclusively and therefore require the presence of one or both of these species to be present in an area (Bishop *et al.*, 2011).	No – no suitable habitat occurs on the site
Thinornis rubricollis (Charadrius rubricollis)	Hooded Plover	The Hooded Plover primarily inhabits sandy, ocean beaches, with the highest densities on beaches with large amounts of beach-washed seaweed that are backed by extensive open dunes. In Western Australia the species also inhabits inland and coastal salt lakes (Birdlife International, 2014e).	Highly Unlikely – not beach habitat

* Habitat descriptions from DoEE (2016) SPRAT Database unless otherwise denoted

Habitat on the site was identified for three listed species of Black Cockatoos being:

- Carnaby's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *latirostris*)
- Baudin's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *baudinii*)
- Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*)

Detailed analysis of the Black Cockatoo habitat on the site is provided in Section 5.

Two marine species, Cattle Egret (*Ardea* (*Bubulcus*) *ibis*) and the Rainbow Bee-eater (*Merops ornatus*) may occur on the site but are unlikely to rely on it for survival. The site may also contain habitat for the Spiny Katydid (Swan Coastal Plain) (*Austrosaga spinifer*) (Priority 2) and the Woolybush Bee (*Hylaeus globuliferus*) (Priority 3). The Southern Brown Bandicoot, Quenda (*Isoodon fusciventer*) (Priority 4) could potentially occur on the site.

4.5 Pest Fauna

There are several pest species that may be present on the site outlined in Table 8.

Table 8: Pest Species Likely to Occur on the Site

Taxa	Family	Species Name	Common Name
Mammalia	Canidae	*Vulpes vulpes*	Red fox
	Felidae	*Felis catus*	Feral cat
	Leporidae	*Oryctolagus cuniculus*	European Rabbit
	Muridae	*Mus musculus*	House Mouse
		Rattus rattus	Black Rat

4.6 Biodiversity Value

The EPA's (2002) *Terrestrial Biological Surveys as an Element of Biodiversity Protection Position Statement No. 3* indicates an ecological assessment of a site must consider its biodiversity value at the genetic, species and ecosystem levels; and its ecological functional value at the ecosystem level. The vegetation on the site is disturbed and fragmented and there is likely to be introduced feral species such as foxes, cats and rabbits which would have modified the fauna assemblage from pre-European settlement. The biodiversity value therefore is considered to be low.

Areas of remnant vegetation in Very Good condition are rated as Good Fauna habitat as most are linked to other areas of vegetation even though there is a high proportion of weeds in the understorey.

Completely Degraded areas are rated as Highly Degraded as these areas are fragmented from areas of remnant vegetation.

5 BLACK COCKATOO HABITAT ASSESSMENT

5.1 Black Cockatoo Species

5.1.1 Baudin's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *baudinii*)

Baudin's Black Cockatoo is most common in the far south-west of Western Australia. It is known to breed from the southern forests north to Collie and east to near Kojonup. Baudin's Black Cockatoo is typically found in vagrant flocks and utilises the taller, more open Jarrah (*Eucalyptus marginata*) and Marri (*Corymbia calophylla*) woodlands where it feeds mainly on Marri seeds and various Proteaceous species (Johnstone, Johnstone and Kirkby, 2011).

The site is just outside the modelled 'Predicted Breeding Area' distribution for Baudin's Black Cockatoos (DAWE, 2022).

5.1.2 Carnaby's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *latirostris*)

Carnaby's Black Cockatoo is found in the south-west of Australia from Kalbarri through to Ravensthorpe. It has a preference for feeding on the seeds of *Banksia, Hakea, Eucalyptus, Grevillea, Pinus* and *Allocasuarina* spp. It is nomadic, often moving toward the coast after breeding. It breeds in tree hollows that are 2.5 – 12m above the ground and have an entrance of 23-30cm with a depth of 1-2.5m. Nesting mostly occurs in smooth-barked trees (e.g. Salmon Gum, Wandoo, Red Morrell). Eggs are laid from July to October, with incubation lasting 29 days (DoE, 2014).

The site is inside the boundary of the modelled distribution for Carnaby's Black Cockatoos (DAWE, 2022).

5.1.3 Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*)

Forest Red-tailed Black Cockatoos are endemic to the humid to sub-humid south-west of Western Australia (SEWPaC, 2012). The range of Forest Red-tailed Black Cockatoos is bound by Gingin in the north to Mt Helena, Christmas Tree Well, West Dale, North Bannister, Mt Saddleback, Kojonup, Rocky Gully, upper King River and Green Range (east of Albany) (SEWPaC, 2012; DoE, 2014). It nests in tree hollows with a depth of 1-5m, that are predominately Marri, Jarrah and Karri (*E. diversicolor*) and it feeds primarily on the seeds of Marri and Jarrah (Johnstone, Johnstone and Kirkby, 2011).

The site is inside the modelled distribution for Forest Red-tailed Black Cockatoos (DAWE, 2022).

5.2 Habitat Survey

PGV Environmental undertook a Black Cockatoo habitat assessment on 26 and 30 September and 25 October 2022 in accordance with the *Referral guideline for 3 WA threatened black cockatoo species Carnaby's Cockatoo (Zanda latirostris), Baudin's Cockatoo (Zanda baudinii) and the Forest Red-tailed Black-cockatoo (Calyptorhynchus banksii naso)* (DAWE, 2022) (Black Cockatoo Referral Guidelines) and the methodology that is outlined in the SPRAT Database for each of the Black Cockatoo species for Black Cockatoo Habitat Assessments.

The survey area was traversed on foot and information on Black Cockatoo foraging, roosting and breeding habitat was assessed. The extent, type and quality of the vegetation present, including the presence and extent of plants known to be used by Black Cockatoos was investigated.

5.3 Habitat definitions

5.3.1 Breeding Habitat

'Breeding habitat' is defined as trees of species known to support breeding within the range of the species which either have a suitable nest hollow OR have a DBH of 500mm or greater (SEWPaC, 2012). Past studies have found that on average hollow openings are 25 cm x 27 cm (Saunders *et al.*, 1982, Saunders and Dawson, 2017) and 30 cm x 34 cm (Johnstone *et al.*, 2013). The height of a hollow entrance off the ground is on average 14.49 m (Johnstone *et al.*, 2013). Nearly all hollows that are used for nesting by Black Cockatoos are located in the main trunk and have a vertical aspect (Johnstone *et al.*, 2013, Saunders and Dawson, 2017). Black Cockatoos are large birds with shoulders that are about 100 mm wide, therefore they require hollows with an entrance bigger than this (as shown above they are typically much larger), but the internal dimensions (depth and floor base) need to be much larger in order for it to be suitable to lay eggs in and for adults to be able to move around.

Previous research has found for Carnaby's Black Cockatoo a mean depth of 1.2 m and a floor diameter of 40 cm is required in order for it to be suitable to lay eggs in and for adults to be able to move around (Johnstone *et al.*, 2013, Saunders and Dawson 2017).

5.3.2 Roosting Habitat

'Roosting habitat' is usually evident due to the presence of Black Cockatoos in the survey area in the evening and early morning and if there are scats or moulted feathers under the roosting area. Black Cockatoos utilise a wide range of native and non-native trees, situated within a variety of land-use types. Roosting habitat is generally in tall (average of > 25 m) tree species that have relatively thick trunks (average DBH of 1 m) and medium foliage density (average of 50 %), and that are not too densely forested amongst other trees (average tree crown connectivity of 20 %) (Le Roux, 2017). Black cockatoos rely upon the availability of suitable night roosting sites in proximity to foraging resources, and particularly on access to water, which are usually within 2 km of the roost (SEWPaC, 2012).

5.3.3 Foraging Habitat

'Foraging habitat' for Black Cockatoos is determined from the plant species that are present in the survey area and evidence of feeding such as direct observation of birds or by chewed nuts and cones. Foraging plants utilised by each species of Black Cockatoo varies, with Carnaby's Black Cockatoo foraging on Eucalypts, pines and proteaceous species, whereas Forest Red-tailed Cockatoos prefer Eucalypts and Allocasuarina and many exotic species and Baudin's prefer mostly seeds of marri and jarrah, also Allocasuarina cones (SEWPaC, 2012).

Foraging habitat was identified by comparing the literature on plant species known to be foraged upon by black cockatoos against the vegetation within the site.

5.4 Breeding

Black Cockatoos are known to breed in hollows of large eucalypts, including Jarrah trees. The site is not known as a breeding site for Black Cockatoos (DoP, 2011; National Map, 2022).

The Black Cockatoo Referral Guidelines define trees of certain species with a DBH of 300 to 500mm or greater, dependent on the tree species, as breeding habitat regardless of the presence or not of hollows. The theory behind this definition is the concept that while the trees may not currently contain hollows, they are mature enough that in the next 50 years or so a hollow might form and be of use to Black Cockatoos for the purposes of breeding.

Sixteen Jarrah trees were recorded on the site that had a DBH of greater than 500mm, however one tree had a large base but was sheared and coppiced and would not form a suitable hollow so a total of fifteen trees on the site meet the definition potential breeding habitat (Figure 6). Details of each tree is provided as Appendix 10. None of the trees had suitable hollows for breeding.

5.5 Roosting

Black Cockatoos are known to roost overnight in tall trees including native and introduced eucalypts and pine trees generally in close proximity to a fresh water source. The site contains limited roosting habitat for Black Cockatoos and roosting has not been recorded on the site (DoP, 2011; Peck *et al.*, 2018; National Map, 2022). The nearest roosting sites are reported to be from around 700m to the north-east (National Map, 2022) with a number of roost sites within 20km (Figure xx).

5.6 Foraging

All the tree species in the areas mapped as having native vegetation are foraging habitat for Black Cockatoos. In addition, some of the understorey species also provide foraging value. In total the site contains thirteen species that are recognised as foraging habitat for Black Cockatoos (Table 12) (Davies 1966; Saunders 1980; Johnstone and Storr 1998; Johnstone and Kirkby 1999; Valentine and Stock, 2008; Groom 2011; Johnstone *et al.*, 2011; SEWPaC, 2012; Bamford, 2013; Johnstone, *et al.*, 2013; Johnstone *et al.*, 2016) as shown in Table 3 (Figure 4). The total area of foraging habitat is 18.835ha (Figure 4).

Table 12: Foraging Species for Black Cockatoos

Species	Common Name	Baudin's Black Cockatoo	Carnaby's Black Cockatoo	Forest red-tailed Black Cockatoo
Acacia saligna	Orange Wattle		✓	
Allocasuarina fraseriana	Sheoak	✓		✓
Banksia attenuata	Candlestick Banksia		✓	
Banksia dallanneyi	Couch Honeypot		✓	
Banksia menziesii	Firewood Banksia		✓	
Bankia prionotes	Acorn Banksia		✓	
Banksia sessilis	Parrot Bush	✓	✓	
Callitris preissii	Rottnest Island Pine		✓	
Eucalyptus marginata	Jarrah	✓	✓	✓
Hakea prostrata	Harsh Hakea	✓	✓	
Hakea ruscifolia	Candle Hakea	✓	✓	
Melia azedarach	Cape Lilac		✓	✓
Xanthorrhoea preissii	Balga		✓	✓

The foraging habitat value for Carnaby's Black Cockatoos was determined using the scoring tool in the revised Black Cockatoo Referral Guidelines (DAWE, 2022). The tool gives a result of 8 for Baudin's Black Cockatoo and 10 for Carnaby's Black Cockatoo and Forest Red-tailed Black Cockatoos which is considered High quality foraging habitat.

Table 13: Scoring Tool for Foraging Habitat for Black Cockatoos

Attribute	Context Adjustor	Baudin's Black Cockatoo	Carnaby's Black Cockatoo	Forest red-tailed Black Cockatoo
Foraging potential	**Subtract 2** from your score if there is no evidence of feeding debris on your site.	-2	0	0
Connectivity	**Subtract 2** from your score if you have evidence to conclude that there is no other foraging habitat within 12 km of your site.	0	0	0
Proximity to breeding	**Subtract 2** if you have evidence to conclude that your site is more than 12 km from breeding habitat.	0	0	0
Proximity to roosting	**Subtract 1** if you have evidence to conclude that your site is more than 20 km from a known night roosting habitat.	0	0	0
Impact from significant plant disease	**Subtract 1** if your site has disease present (e.g. *Phytophthora* spp. or Marri canker) and the disease is affecting more than 50% of the preferred food plants present.	0	0	0
Score		**8**	**10**	**10**

5.7 Regional Context

To assist in determining the significance of any impact on Black Cockatoo habitat on the site an assessment of Black Cockatoo habitat within the vicinity of the site was undertaken using DBCA mapping information (Figure 7). There is 17,973ha of Black Cockatoo habitat within 12km of the site, including 3,635ha in DBCA managed land and 9,911ha outside of DBCA managed land as shown in Table 15.

Table 15: Black Cockatoo Habitat within 12km

Reserve Type	Area (ha)
Conservation Park	2.816
Crown Freehold - Dept Managed	84.303
Marine Park	0.017
National Park	388.305
Nature Reserve	25.451
Section 5(1)(h) Reserve	32.662
State Forest	3,101.572
TOTAL	**3,635.126**

6 SUMMARY

6.1 Flora and Vegetation

The flora and vegetation survey of eight lots in the East Wanneroo Precinct 8 area resulted in the following findings:

- Approximately 18.835ha of native vegetation occurs in the survey area and 10.683ha is cleared;
- A total of 160 plant species were recorded in the spring survey, including 130 native and 38 introduced species (22.6);
- None of the plant species is a Threatened or Priority species;
- Four native vegetation types were described and mapped on the site. All vegetation types were Low Open Woodlands with various coverage of *Eucalyptus marginata, Allocasuarina fraseriana, Banksia attenuata* and *B. menziesii*;
- The condition of the native vegetation was mostly Very Good with some Good areas as well as Degraded and Completely Degraded;
- The vegetation belongs to the Karrakatta Central and South vegetation complex which has approximately 29.5% of its original extent remaining on the Southern Swan Coastal Plain but only 2.5% protected. The amount remaining is above the EPA's target for retaining at least 10% of each vegetation complex. The amount protected is under the criteria in the *Urban Bushland Strategy* of protecting at least 10% of each vegetation complex;
- Computer analysis of quadrat data resulted in the vegetation on the site being representative of Floristic Community Type ACP 28 'Spearwood *Banksia attenuata* or *Banksia attenuata – Eucalyptus marginata* woodlands'. SCP 28 is not of itself a TEC or PEC at State or Commonwealth level; and
- Three patches of vegetation in Good and Very Good condition were large enough to meet the requirements of the Commonwealth listed Banksia Woodlands of the Swan Coastal Plain TEC. A total of 13.352ha of Banksia Woodland TEC was mapped on the site.

6.2 Fauna

The fauna survey of eight lots in the East Wanneroo Precinct 8 area resulted in the following findings:

- The Open Woodland vegetation is habitat for three species of Black Cockatoo:
  - Carnaby's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *latirostris*);
  - Baudin's Black Cockatoo (*Calyptorhynchus* (*Zanda*) *baudinii*); and
  - Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii naso*).
- The site may provide habitat for two marine species, Cattle Egret (*Ardea* (*Bubulcus*) *ibis*) and the Rainbow Bee-eater (*Merops ornatus*), the Spiny Katydid (Swan Coastal Plain) (*Austrosaga spinifer*) (Priority 2) and the Woolybush Bee (*Hylaeus globuliferus*) (Priority 3). The Southern Brown Bandicoot, Quenda (*Isoodon fusciventer*) (Priority 4) could potentially occur on the site.
- The site contains 18.835ha of foraging habitat for all three species of Black Cockatoo and 15 potential breeding trees (all Jarrah).
- There is 17,973ha of Black Cockatoo habitat within 12km of the site, including 8,062ha in DBCA managed land and 9,911ha outside of DBCA managed land.

Vegetation Condition
(SOURCE: Bush Forever, Govt. of W.A., 2000)
P - Pristine
Pristine or nearly so, no obvious signs of disturbance.
Ex - Excellent
Vegetation structure intact, disturbance affecting individual species and weeds are non aggressive species.
VG - Very Good
Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
G - Good
Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
D - Degraded
Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
CD - Completely Degraded
The structure of the vegetation is no longer intact and the areas is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora composing weed or crop species with isolated native trees or shrubs.
Cl - Cleared
No native vegetation remaining.

Species	Species Name	Scientific Name Authorship	Taxon Rank	Kingdom	Phylum	Class	Order	Family	Vernacular Name
https://biodiversity.org.au/afd/taxa/5291343e-fdeb-4a65-8ba5-928f5b96acf5	Gymnorhina tibicen	(Latham, 1801)	species	Animalia	Chordata	Aves	Passeriformes	Artamidae	Australian Magpie
https://biodiversity.org.au/afd/taxa/8117f68b-5460-4626-8400-e171464e08ad	Corvus coronoides	Vigors & Horsfield, 1827	species	Animalia	Chordata	Aves	Passeriformes	Corvidae	Australian Raven
https://biodiversity.org.au/afd/taxa/8204979f-5302-41ea-943f-01d3c420f7bb	Anthochaera (Anthochaera) carunculata	(Shaw, 1790)	species	Animalia	Chordata	Aves	Passeriformes	Meliphagidae	Red Wattlebird
https://biodiversity.org.au/afd/taxa/9b4ad548-8bb3-486a-ab0a-905506c463ea	Eolophus roseicapilla	(Vieillot, 1817)	species	Animalia	Chordata	Aves	Psittaciformes	Cacatuidae	Galah
https://biodiversity.org.au/afd/taxa/1c4dce12-16f6-49ab-b578-0673551214fd	Rhipidura (Sauloprocta) leucophrys	(Latham, 1801)	species	Animalia	Chordata	Aves	Passeriformes	Rhipiduridae	Willie Wagtail
https://biodiversity.org.au/afd/taxa/81be58f5-caf7-4f3d-b1eb-d4f83eb0af5a	Anas (Anas) superciliosa	Gmelin, 1789	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Pārera
https://biodiversity.org.au/afd/taxa/f5f5ddd8-ae6a-431b-9e08-3e992b12fa64	Threskiornis moluccus	(Cuvier, 1829)	species	Animalia	Chordata	Aves	Ciconiiformes	Threskiornithidae	Black-necked Ibis
https://biodiversity.org.au/afd/taxa/bb53b420-0a1f-4a49-9d1e-2a6154c685a8	Fulica atra	Linnaeus, 1758	species	Animalia	Chordata	Aves	Gruiformes	Rallidae	Eurasian Coot
https://biodiversity.org.au/afd/taxa/f83c15ca-4ff5-4c37-be49-ce49a431f0ca	Cygnus (Chenopis) atratus	(Latham, 1790)	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Black Swan
https://biodiversity.org.au/afd/taxa/681ea214-3788-4cc6-8b97-0b325d6bba6b	Cracticus torquatus	(Latham, 1801)	species	Animalia	Chordata	Aves	Passeriformes	Artamidae	Grey Butcherbird
https://biodiversity.org.au/afd/taxa/ce17b284-d607-496a-992f-f3129bfd3997	Grallina cyanoleuca	(Latham, 1801)	species	Animalia	Chordata	Aves	Passeriformes	Monarchidae	Magpie-lark
https://biodiversity.org.au/afd/taxa/eedce521-aaa8-43fa-bbd7-0074d0bcbf4b	Biziura lobata	(Shaw, 1796)	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Musk Duck
https://biodiversity.org.au/afd/taxa/fe0d4e5e-6bd5-4e46-a77c-00e8cec73410	Zosterops lateralis	(Latham, 1801)	species	Animalia	Chordata	Aves	Passeriformes	Zosteropidae	Silvereye
https://biodiversity.org.au/afd/taxa/5fed5ecf-2199-4f64-a9f7-90b39f88a90a	Barnardius zonarius	(Shaw, 1805)	species	Animalia	Chordata	Aves	Psittaciformes	Psittacidae	Australian Ringneck
https://biodiversity.org.au/afd/taxa/34b31e86-7ade-4cba-960f-82a6ae586206	Cacatua (Licmetis) sanguinea	Gould, 1843	species	Animalia	Chordata	Aves	Psittaciformes	Cacatuidae	Little Corella
https://biodiversity.org.au/afd/taxa/0b7c528a-4104-4a96-853e-05a37c327067	Microcarbo melanoleucos	(Vieillot, 1817)	species	Animalia	Chordata	Aves	Pelecaniformes	Phalacrocoracidae	Little Cormorant
https://biodiversity.org.au/afd/taxa/97a59c84-af21-4cdc-bac7-a97c5201db42	Rhipidura (Rhipidura) albiscapa	Gould, 1840	species	Animalia	Chordata	Aves	Passeriformes	Rhipiduridae	Grey Fantail
https://biodiversity.org.au/afd/taxa/efaa935b-e248-456a-b85e-b048b465b676	Anas (Nettion) gracilis	Buller, 1869	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Oceanic Teal
https://biodiversity.org.au/afd/taxa/8931bcfb-95ea-44b1-96c9-c0036191e15c	Tadorna (Casarca) tadornoides	(Jardine & Selby, 1828)	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Chestnut Shelduck
https://biodiversity.org.au/afd/taxa/3dbe8a1f-e562-42ba-a165-565c0704f8f2	Porphyrio (Porphyrio) porphyrio	(Linnaeus, 1758)	species	Animalia	Chordata	Aves	Gruiformes	Rallidae	Purple Gallinule
https://biodiversity.org.au/afd/taxa/1fc76c4d-4830-4129-9b86-1c7e944c3c50	Dacelo (Dacelo) novaeguineae	(Hermann, 1783)	species	Animalia	Chordata	Aves	Coraciiformes	Alcedinidae	Kookaburra
https://biodiversity.org.au/afd/taxa/c96b19fd-2a54-4361-a5cf-baecf741310e	Phalacrocorax (Phalacrocorax) sulcirostris	(Brandt, 1837)	species	Animalia	Chordata	Aves	Pelecaniformes	Phalacrocoracidae	Little Black Cormorant
https://biodiversity.org.au/afd/taxa/8fd1977b-9edf-4ddf-b6cf-24a09db4d18c	Egretta novaehollandiae	(Latham, 1790)	species	Animalia	Chordata	Aves	Ciconiiformes	Ardeidae	Matuka
https://biodiversity.org.au/afd/taxa/6ccdb357-d666-4097-b0f6-88bb1a392112	Gavicalis virescens	(Vieillot, 1817)	species	Animalia	Chordata	Aves	Passeriformes	Meliphagidae	Singing Honeyeater
https://biodiversity.org.au/afd/taxa/4e118c73-06a7-4131-bd67-5da5d2d61fd7	Hirundo (Hirundo) neoxena	Gould, 1843	species	Animalia	Chordata	Aves	Passeriformes	Hirundinidae	Welcome Swallow
https://biodiversity.org.au/afd/taxa/31113d80-ed4f-4bb0-9a65-48080e4c6dd1	Haliastur sphenurus	(Vieillot, 1818)	species	Animalia	Chordata	Aves	Accipitriformes	Accipitridae	Whistling Eagle-hawk
https://biodiversity.org.au/afd/taxa/75e90438-cf36-403e-9223-a7d4737b1fd1	Gerygone fusca	(Gould, 1838)	species	Animalia	Chordata	Aves	Passeriformes	Acanthizidae	Fuscous Warbler
https://biodiversity.org.au/afd/taxa/e2070aa5-7ab4-41a8-9b41-b3f0c2e26390	Chroicocephalus novaehollandiae	(Stephens, 1826)	species	Animalia	Chordata	Aves	Charadriiformes	Laridae	Silver Gull
https://biodiversity.org.au/afd/taxa/ada6105e-c2de-4b93-9687-8e64d10863a7	Lichmera (Lichmera) indistincta	(Vigors & Horsfield, 1827)	species	Animalia	Chordata	Aves	Passeriformes	Meliphagidae	Brown Honeyeater
https://biodiversity.org.au/afd/taxa/43abe3ea-7ccc-41cc-920f-d9cfa107207e	Pelecanus conspicillatus	Temminck, 1824	species	Animalia	Chordata	Aves	Pelecaniformes	Pelecanidae	Australian Pelican
https://biodiversity.org.au/afd/taxa/cb748125-0c06-4649-8ed8-e379e81e53c1	Tachybaptus novaehollandiae	(Stephens, 1826)	species	Animalia	Chordata	Aves	Podicipediformes	Podicipedidae	Australian Little Grebe
https://biodiversity.org.au/afd/taxa/bf8abc11-ebe1-4f1a-9950-805e5bfcf90a	Columba (Columba) livia	Gmelin, 1789	species	Animalia	Chordata	Aves	Columbiformes	Columbidae	Rock Pigeon
https://biodiversity.org.au/afd/taxa/702a989c-9e87-40d5-9694-e6b94dc6521e	Malurus (Malurus) splendens	(Quoy & Gaimard, 1830)	species	Animalia	Chordata	Aves	Passeriformes	Maluridae	Splendid Fairy-wren
https://biodiversity.org.au/afd/taxa/7954bd26-ddb3-4e7e-823c-4a692b7bde74	Chenonetta jubata	(Latham, 1801)	species	Animalia	Chordata	Aves	Anseriformes	Anatidae	Australian Wood Duck/maned Goose
https://biodiversity.org.au/afd/taxa/947595db-244f-4160-b30d-0473b37d857b	Poliocephalus poliocephalus	(Jardine & Selby, 1827)	species	Animalia	Chordata	Aves	Podicipediformes	Podicipedidae	Hoary-headed Dabchick
https://biodiversity.org.au/afd/taxa/c319dbaf-a363-4853-b333-75f14c47fc82	Threskiornis spinicollis	(Jameson, 1835)	species	Animalia	Chordata	Aves	Ciconiiformes	Threskiornithidae	Letter Bird
NZOR-6-117936	Streptopelia chinensis	Scopoli	species	Animalia	Chordata	Aves	Columbiformes	Columbidae	Spotted Dove

Protected Matter Search Tool Report

Department of Climate Change, Energy, the Environment and Water

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 22-Dec-2022

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Caveat
Acknowledgements

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or ma relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	31
Listed Migratory Species:	15

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	10
Commonwealth Heritage Places:	None
Listed Marine Species:	22
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	7
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	30
Key Ecological Features (Marine):	None
Biologically Important Areas:	None
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities [Resource Information

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area	In feature area

Listed Threatened Species [Resource Information

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat may occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In feature area

Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area	In feature area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In feature area
Zanda latirostris listed as Calyptorhynchus latirostris Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding known to occur within area	In feature area
INSECT			
Hesperocolletes douglasi Douglas' Broad-headed Bee, Rottnest Bee [66734]	Critically Endangered	Species or species habitat may occur within area	In feature area
MAMMAL			
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat may occur within area	In buffer area only
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat may occur within area	In feature area
PLANT			
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area	In feature area
Anigozanthos viridis subsp. terraspectans Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat may occur within area	In feature area

Banksia mimica Summer Honeypot [82765]	Endangered	Species or species habitat may occur within area	In feature area
Caladenia huegelii King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat may occur within area	In feature area
Caleana dixonii listed as Paracaleana dixonii Sandplain Duck Orchid [87944]	Endangered	Species or species habitat may occur within area	In buffer area only
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat may occur within area	In feature area
Drakaea elastica Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area	In feature area
Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat may occur within area	In feature area
Eucalyptus argutifolia Yanchep Mallee, Wabling Hill Mallee [24263]	Vulnerable	Species or species habitat may occur within area	In feature area
Grevillea curviloba subsp. incurva Narrow curved-leaf Grevillea [64909]	Endangered	Species or species habitat may occur within area	In buffer area only
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat may occur within area	In feature area

Marianthus paralius			
[83925]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Synaphea sp. Fairbridge Farm (D. Papenfus 696)			
Selena's Synaphea [82881]	Critically Endangered	Species or species habitat may occur within area	In buffer area only
Thelymitra dedmaniarum			
Cinnamon Sun Orchid [65105]	Endangered	Species or species habitat may occur within area	In buffer area only
SHARK			
Pristis pristis			
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area

Listed Migratory Species		[Resource Information	
Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Apus pacificus			
Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area
Migratory Marine Species			
Pristis pristis			
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area
Migratory Terrestrial Species			
Motacilla cinerea			
Grey Wagtail [642]		Species or species habitat may occur within area	In feature area
Migratory Wetlands Species			
Actitis hypoleucos			
Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Calidris acuminata			
Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area	In feature area
Calidris canutus			
Red Knot, Knot [855]	Endangered	Species or species habitat likely to occur within area	In feature area

Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area	In feature area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area	In feature area
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur within area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due t the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referra of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine tl existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the repor or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known an if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together wi point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets t rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018.*

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of 'Specially Protected Fauna' listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of 'Rare Flora' listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be "*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be "*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be "*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*".

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where "*there is no reasonable doubt that the last member of the species has died*", and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that "*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*", and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018.*

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

(a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.

(b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.

(c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤5 occurrences or a total area of ≤ 100ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

(i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:

(ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;

(iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

(i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.

(ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.

(iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
b) the following subparagraphs are satisfied:
   i. the species is a species of fish;

ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium–term future (indicative timeframe being the next 50 years).

APPENDIX 6

Species List

SPECIES LIST – East Wanneroo Precinct 3

GYMNOSPERMS

CUPPRESSACEAE
**Callitris preissii*

ZAMIACEAE
Macrozamia riedlei

MONOCOTYLEDONS

ANACARDIACEAE
Lyginia barbata

ASPARAGACEAE
Lomandra hermaphrodita
Lomandra caespitosa
Sowerbaea laxiflora
Thysanotus manglesianus
Thysanotus thyrsoideus

COLCHICACEAE
Burchardia congesta

CYPERACEAE
Alexgeorgea nitens
Chaetospora curvifolia
Isolepis marginata
Lepidosperma leptostachyum
Lepidosperma pubisquameum
Lepidosperma squamatum
Mesomelaena pseudostygia
Morelotia octandra
Schoenus grandiflorus

DASYPOGONACEAE
Calectasia narragara
Dasypogon bromeliifolius

HAEMODORACEAE
Anigozanthos humilis
Anigozanthos manglesii
Conostylis aurea
Conostylis juncea
Conostylis setigera subsp. *setigera*
Haemodorum laxum
Phlebocarya ciliata

HEMEROCALLIDACEAE
Caesia micrantha
Dianella revoluta var. *divaricata*
Tricoryne elatior

IRIDACEAE
**Freesia alba x leichtlinii*
**Gladiolus caryophyllaceus*
**Moraea flaccida*
Orthrosanthus laxus
Patersonia occidentalis
**Romulea rosea*

ORCHIDACEAE
Caladenia arenicola
Caladenia discoidea
Caladenia flava
Caladenia latifolia
Diuris corymbosa
Elythranthera brunonis
Leporella fimbriata
Microtis media
Pterostylis recurva
Pterostylis vittata
Pyrorchis nigricans
Thelymitra campanulata
Thelymitra crinita

POACEAE
Austrostipa flavescens
**Avena fatua*
**Briza maxima*
**Bromus diandrus*
**Ehrharta calycina*
**Ehrharta longiflora*
**Lolium perenne*
**Pentameris airoides*

RESTIONACEAE
Desmocladus flexuosus
Hypolaena exsulca

XANTHORRHOEACEAE
Xanthorrhoea brunonis
Xanthorrhoea preissii

DICOTYLEDONS

AIZOACEAE
**Carpobrotus edulis*

AMARANTHACEAE
Ptilotus polystachyus

APIACEAE
Xanthosia huegelii

ARALIACEAE
Trachymene pilosa

ASTERACEAE
**Arctotheca calendula*
**Cotula turbinata*
Hyalosperma cotula
**Hypochaeris glabra*
Millotia myosotidifolia
**Monoculus monstrosus*
**Osteospermum ecklonis*
Podotheca angustifolia
Podotheca gnaphalioides
**Sonchus oleraceus*
**Taraxacum officinale*
**Urospermum picroides*
**Ursinia anthemoides*
Waitzia suaveolens

BRASSICACEAE
**Heliophila pusilla*

CAMPANULACEAE
**Wahlenbergia capensis*
Wahlenbergia preissii

CARYOPHYLLACEAE
**Petrorhagia dubia*

CASUARINACEAE
Allocasuarina fraseriana
Allocasuarina humilis

CRASSULACEAE
Crassula colorata

DILLENIACEAE
Hibbertia huegelii
Hibbertia hypericoides
Hibbertia racemosa
Hibbertia subvaginata

DROSERACEAE
Drosera erythrorhiza
Drosera macrantha
Drosera menziesii

ERICACEAE
Conostephium pendulum
Conostephium preissii
Styphelia propinqua

EUPHORBIACEAE
Monotaxis grandiflora var. *grandiflora*

FABACEAE
**Acacia iteaphylla*
Acacia applanata
Acacia cyclops
Acacia huegelii
Acacia pulchella
Acacia saligna
Bossiaea eriocarpa
**Chamaecytisus palmensis*
Daviesia divaricata
Daviesia nudiflora
Daviesia triflora
Gastrolobium capitatum
Gompholobium tomentosum
Hardenbergia comptoniana
Hovea pungens
Hovea trisperma var. *trisperma*
Isotropis cuneifolia subsp. *cuneifolia*
Jacksonia sternbergiana

Kennedia prostrata
**Lupinus cosentinii*
**Trifolium campestre*

GERANIACEAE
**Erodium botrys*
**Pelargonium capitatum*

GOODENIACEAE
Dampiera linearis
Scaevola repens var. *repens*

LAMIACEAE
Hemiandra pungens

LOGANIACEAE
Phyllangium paradoxum

LORANTHACEAE
Nuytsia floribunda

MELIACEAE
**Melia azedarach*

MONTIACEAE
Calandrinia corrigioloides

MYRTACEAE
**Agonis flexuosa*
Calothamnus sanguineus
Calytrix flavescens
Calytrix fraseri
**Chamelaucium uncinatum*
Eremaea pauciflora
Eucalyptus marginata
Hypocalymma robustum
**Leptospermum laevigatum*
Scholtzia involucrata

OXALIDACEAE
**Oxalis pes-caprae*

PAPAVERACEAE
**Fumaria capreolata*

PHYLLANTHACEAE
Poranthera microphylla

PITTOSPORACEAE
Billardiera heterophylla

POLYGALACEAE
Comesperma calymega

PRIMULACEAE
**Lysimachia arvensis*

PROTEACEAE
Adenanthos cygnorum var. *cygnorum*
Banksia attenuata
Banksia dallanneyi
Banksia menziesii
Banksia prionotes
Banksia sessilis
Grevillea vestita
Hakea prostrata
Hakea ruscifolia
Persoonia saccata
Petrophile linearis
Petrophile macrostachya
Stirlingia latifolia

RUBIACEAE
Opercularia vaginata

RUTACEAE
Philotheca spicata

STYLIDIACEAE
Levenhookia stipitata
Stylidium adpressum
Stylidium brunonianum
Stylidium calcaratum
Stylidium carnosum
Stylidium piliferum
Stylidium schoenoides

THYMELEACEAE
Pimelea floribunda
Pimelea sulphurea

VIOLACEAE
Hybanthus calycinus

APPENDIX 7

Quadrat Data

QUADRAT EW1

50 389054 E 6485569 N

Vegetation: *Banksia attenuata/B. menziesii/Allocasuarina fraseriana* Low Open Woodland over *Hibbertia hypericoides* Open Low Heath
Condition: Very Good
Soil Type: Dark grey-brown sand
Landform: Gentle slope down to the south-east
Date: 26.9.22 and 25.10.22
Recorded by: Paul van der Moezel

8 November 2022

Paul van der Moezel
Managing Director
PGV Environmental
Suite 3, 67 Howe St
Osborne Park Western Australia 6017

Dear Paul,

Plantecology Consulting was commissioned to undertake the numerical analysis and assignment of plot data to existing Floristic Community Types of the Swan Coastal Plain for a site at east Wanneroo. The methods and results outlined below are based on the data as supplied on the 2nd November 2022.

1 Introduction

The remnant vegetation of the southern Swan Coastal Plain (SCP) was surveyed by Gibson et al. (1994) to provide an understanding of the major floristic gradients across the region. The major plant communities (or FCTs) were defined by classifying the data according to the similarities in species composition between plots. When determining the FCT of a new record, a floristic analysis of species composition provides the most robust method that is consistent with the original classification. Presently, a single consistent method for the determination of FCTs for vegetation data in the Swan Coastal Plain is not available. Therefore, it is preferable to use multiple methods and compare the output for the most likely result. All analyses described below were undertaken using R packages Cluster (Maechler et al 2019), Vegclust (De Cáceres et al. 2010), indicspecies (De Cáceres and Legendre 2009), optpart (Roberts 2020) and Vegan (Oksanen et al. 2020).

2 Methods

2.1. Hierarchical Clustering Assignments

Hierarchical agglomerative clustering is the usual first stage in classifying vegetation data into community types. This involves calculating the similarity (or more often, the dissimilarity) between plots within the dataset and then sequentially fusing the plots into groups according to their similarity. This type of method was used in the analysis of the original Swan Coastal Plain dataset (Gibson et al. 1994) and to determine the conservation status of additional plots, data is often added to the original dataset and the analysis re-run (Environmental Protection Authority 2016) . The direct use of the original dataset as the basis for assigning new plot data to the regional classification has some drawbacks, however. Firstly, a hierarchical clustering only applies to the relationships between plots, and the relative distances between them, within that particular dataset. The addition of new data often alters the relative cophenetic distances and disrupts the clustering output. Secondly, as an unsupervised method, hierarchical clustering does not define rules for the membership of the defined groups, and so the addition of new plots requires the rebuilding of the entire hierarchy (De Cáceres and Wiser 2012).

The data for the Swan Coastal Plain regional survey (Gibson et al. 1994) was downloaded from the NatureMap website. This is largely similar to the original survey except for one site (OATES-1), which has now been excluded, resulting in a dataset of 508 plots. The species nomenclature of the original

Plantecology CONSULTING

E shane@plantecology.com.au

ABN 18 849 210 133

dataset was updated to be consistent with current usage. Where original names could not be matched clearly to the updated usage, those taxa were removed from the analysis.

The new data from the East Wanneroo survey was added to the Swan Coastal Plain dataset and the new dataset was then analysed calculating the Bray-Curtis distance coefficient (or resemblance measure) and the flexible beta linkage method (beta = -0.1). Assignment of the East Wanneroo plots was to the nearest distinct group by inspection of the resulting dendrogram. To remove any effect of spatial correlation between the new plots, data was also added to the matrix one plot a time and the analysis re-run.

In practice, there is often less similarity between new plots and the plots of the original group to which it is assigned than between the original plots themselves. That is, new plots are usually most similar to fringing members of the original group.

2.2. Non-hierarchical Clustering Assignments

Non-hierarchical clustering methods often allow new plot data to be added to previous classifications because they are based on the concept that each group or cluster is represented by a prototype i.e. either a centroid or a medoid (a 'type' plot) (De Cáceres and Wiser 2012). Therefore, new observations can be assigned to an existing classification by calculating the distance to the nearest prototype (which may be considered a membership criterion). This approach is conceptually preferable to the hierarchical reconstruction approach because it defines numerical rules that can be consistently applied. However, it also means the original classification needs to be re-analysed using a different method, which can be problematic because not all sites from the original classification may be diagnostic for their respective clusters.

For the analysis of the East Wanneroo data, an updated SCP dataset of core diagnostic plots was used as for the non-hierarchical clustering analysis. The dataset was then analysed using Fuzzy C-Means clustering in the R package Vegclust (De Cáceres et al. 2010). A fuzziness coefficient of 1.1 was chosen to minimise influence from noisy data points. FCTs with too few plots to reliably define or determine a prototype (e.g. FCT 14 with two plots) were removed from the analysis. Similarly, some plots that were regularly being misclassified (such as those from clusters with large internal heterogeneity) were also removed. The final dataset consisted of 344 plots with 1316 taxa representing 38 FCTs. Each site of the East Wanneroo data was then assigned a FCT using function 'vegclass' in the Vegclust (De Cáceres et al. 2010) package.

It should be noted the non-hierarchical clustering approach can provide excellent results when the new plot data is in a near natural state i.e. in 'Excellent' or better condition with an alpha diversity near to that of the Swan Coastal Plain dataset. When the subject vegetation has been disturbed or when there is a high proportion of weed species in the data, non-hierarchical clustering results are often less reliable than those of hierarchical clustering.

3 Results

Cluster analysis of the East Wanneroo plots indicate two associations are present, with one comprising Plots 4 and 6, and the other Plots EW 1, EW 2, 3 EW, and EW 5 (Figure 1). Dividing the dendrogram into 3 groups produced apparent misclassifications and suggested over-splitting rather than any ecologically valid clusters.

The hierarchical clustering assignments indicated that the native vegetation units within the site are most similar to SCP28 – 'Spearwood *Banksia attenuata* or *Banksia attenuata* - *Eucalyptus* woodlands' (Figure 3). Assigning all plots to the Swan Coastal Plain dataset in the same analysis demonstrated the spatial correlation between the plots (Figure 3). All plots cluster together and then are fused with SCP28 in the dendrogram.

Plantecology CONSULTING

Kingsley, WA 6026
T 0429 061 094
E shane@plantecology.com.au

ABN 18 849 210 133

Individual clustering assignments for Plots EW 2, EW 3 and EW 6 were all assigned to SCP28, which is consistent with the assignment of the grouped plots shown in Figure 3. The assignment for Plots EW 1 and EW 5 was to SCP20a - '*Banksia attenuata* woodlands over species rich dense shrublands'. This is inconsistent with other results and the assignment to SCP20a for Plots EW 1 and EW 5 while Plots EW 2 and EW 3 from the same local association is anomalous. Plot EW 4 was assigned to Swan Coastal Plain 20c 'Eastern shrublands and woodlands' in the hierarchical clustering, although it initially fuses with a plot from SCP21c.

The results for the non-hierarchical clustering were consistent with the hierarchical clustering of the grouped plots (Table 1). All but EW 4 were assigned to SCP28 with strengths of membership (a similar concept to probability) exceeding 30%. The secondary membership for these plots was to SCP21c, a pattern which is consistent with plots from SCP28 in the original Swan Coastal Plain dataset. A similarity to SCP20a was demonstrated for Plots EW 1 and EW 3, with strengths of membership of 11.2%.

The non-hierarchical clustering assignment for Plot EW 4 was equivocal. The plot assigned to SCP6 - 'Weed dominated wetlands in heavy soils', which is often seen where species richness within a plot is comparatively low compared to the original Swan Coastal Plain dataset, and the strengths of membership only ranged from 15.5% for SCP28 to 18.2% for SCP6.

Table 1: Results of non - hierarchical analysis for plots from the East Wanneroo survey (Strength of membership shown in brackets).

Plot	FCT of nearest group	FCT of 2nd nearest group	FCT of 3rd nearest group
EW 1	28 (31.4%)	21c (14.2%)	20a (11.2%)
EW 2	28 (38.1%)	21c (17.1%)	23a (4.8%)
EW 3	28 (31.1%)	20a (11.2%)	21c (10.8%)
EW 4	6 (18.2%)	21c (15.8%)	28 (15.5%)
EW 5	28 (35.7%)	21c (15.5%)	5 (6.1%)
EW 6	28 (30.2%)	21c (11.1%)	5 (8.0%)

4 Discussion

The results of the numerical analysis indicate that the most likely FCT for the East Wanneroo site is SCP28 – 'Spearwood *Banksia attenuata* or *Banksia attenuata* - *Eucalyptus* woodlands'. This result is consistent between the hierarchical clustering result for the grouped plots and the non-hierarchical clustering results, as well as for three plots when assigning the plots individually.

There is some relationship with SCP20a - '*Banksia attenuata* woodlands over species rich dense shrublands' with Plots EW 1 and EW 5 assigned to this FCT in the individual analysis. Second and third tier relationships were also observed for Plots EW 1 and EW 3 in the non-hierarchical clustering. However, these results are inconsistent with the cluster analysis for the local groups and as Plots EW 1 and EW 5 are members of the same group as EW 2 and EW 3, which were both assigned to SCP28. The uncertainty in some assignments may be partly due to SCP28 and SCP20a having many species in common, and both show some similarity to communities of the Spearwood Dune System (Gibson et al. (1994). It is more likely that a correct FCT assignment for East Wanneroo site is to SCP28 as the majority of the various analyses point to this. Although less likely, SCP20a may occur within the site.

5 Conclusion

In summary, the results of numerical analysis indicate that SCP28 – 'Spearwood *Banksia attenuata* or *Banksia attenuata* - *Eucalyptus* woodlands' is the most likely floristic community type present within the site at East Wanneroo. It is less likely that SCP20a occurs within the vegetation at the East Wanneroo site, but the possibility cannot be dismissed given the results of the analysis.

Should you require any further information or have any other queries, please feel free to contact me.

Sincerely yours,

Dr. Shane Chalwell

SUMMARY

Coterra Environment, on behalf of Satterley Property Group, engaged Ecoscape to undertake a biological survey of Precinct 3, an urban expansion area located within East Wanneroo that currently comprises rural residential dwellings, bushland and market gardens. The biological survey incorporated a Detailed and Targeted Flora and Vegetation survey, and a Basic fauna survey and targeted Black Cockatoo habitat assessment of an area 134.86 ha in size. The survey supplements a previous assessment by PGV Environmental in 2022 and was undertaken to inform avoidance and mitigation measures that could be implemented in the course of the area's potential development.

A desktop assessment was undertaken prior to the field survey to identify the environmental values of the survey area. The key findings were:

- the survey area intersects 12.0 ha of Bush Forever sites
- two pre-European vegetation units occur within the survey area, associations 949 and 6 with estimated remaining extents within the City of Wanneroo of 46.3% and 21.9%, respectively
- eleven Threatened and Priority Ecological Communities (TECs, PECs) were identified within a 10 km radius of the survey area from the Department of Biodiversity, Conservation and Attractions (DBCA) database search. One occurs within the survey, the *Banksia Woodlands of the Swan Coastal Plain ecological community* ('Banksia Woodlands TEC'; Commonwealth-listed Endangered TEC; State-listed Priority 3 PEC).
- fifty Threatened and Priority flora (TF, PF) were identified within a 10 km radius of the survey area from the DBCA and Protected Matter Seach Tool (PMST) database searches, consisting of 24 TF, six P1, five P2, nine P3 and six P4 flora. Two PF were considered likely to occur based on the results of the likelihood assessment, *Acacia benthamii* (P2) and *Jacksonia sericea* (P4).
- fifty-nine Threatened and Priority fauna were identified within a 10 km radius of the survey area from the PMST (which includes likelihood of suitable habitat occurring) and DBCA database searches, consisting of nine mammals, 49 birds and one reptile
- a large proportion of the survey area was subject to previous assessment by PGV Environmental (2023). The assessment identified occurrences of the *Banksia Woodland* TEC and suitable habitat for Black Cockatoos.

The flora and vegetation survey was conducted during 17-19 September 2024. The key findings were:

- a total of 207 vascular flora species were recorded from seven floristic quadrats and opportunistic observations, including one P2 taxon, *Poranthera moorokatta*, and 64 introduced species
- PF assessed as likely to occur during the desktop assessment were revised post-survey. Although suitable habitat is considered present, the likelihood of both *Acacia benthamii* (P2) and *Jacksonia sericea* (P4) occurring was revised to 'unlikely' based on search effort and the results of previous assessment by PGV Environmental.
- two vegetation types were mapped in the survey area:
  - **BaLOF**: *Banksia attenuata, Allocasuarina fraseriana* and *Banksia menziesii* low open forest, occupying 14.8%
  - **EmmLW**: *Eucalyptus marginata* subsp. *marginata, Banksia prionotes* and *Allocasuarina fraseriana* low woodland, occupying 9.6%
- one TEC, the *Banksia Woodlands of the Swan Coastal Plain ecological community*, was mapped within the survey area, totalling 17.9 ha or 13.3%
- Floristic Community Type analysis indicated that both vegetation types within the survey area are most likely SCP28 'Spearwood *Banksia attenuata* or *B. attenuata-Eucalyptus* woodlands' which is representative of the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC) Act-listed Banksia Woodlands TEC
- vegetation condition ranged from Completely Degraded to Very Good, with the majority of native vegetation in Good or Very Good condition.

The fauna survey was conducted during 3, 10 and 12 February 2025. The key findings were:

- thirty-six vertebrate fauna species were recorded from the survey area, consisting of five mammals (two introduced), 29 birds (four introduced) and two reptiles
- four conservation-listed species were recorded:
  - Carnaby's Cockatoo (Endangered under the Commonwealth EPBC Act and Western Australian *Biodiversity Conservation Act 2016* (BC Act))
  - Forest Red-tailed Black Cockatoo (Vulnerable under the EPBC Act and BC Act)
  - Quenda (Priority 4 as listed by the DBCA)
- one fauna habitat occurs within the survey area, described as Banksia Woodland (occupying 24.40% or 32.90 ha) with the remainder not native vegetation or cleared for rural/rural residential land uses
- the Banksia Woodland habitat type is high-quality foraging habitat for Carnaby's Cockatoos and moderate quality foraging habitat for Forest Red-tailed Black Cockatoos, according to the Bamford scale, and high-quality habitat for both species according to the Commonwealth guidelines rating tool.

TEC	Threatened Ecological Community
TF	Threatened Flora (formerly termed Declared Rare Flora, DRF, in Western Australia)

Acronyms	
var.	Variety (infrataxon)
VU	Vulnerable (listed under Commonwealth EPBC Act and/or Western Australian BC Act)
WAH	Western Australian Herbarium
WAOL	Western Australian Organism List
WAPC	Western Australian Planning Commission
WoNS	Weeds of National Significance
*	Introduced flora species (i.e. weed)

1 INTRODUCTION

1.1 BACKGROUND

East Wanneroo Precinct 3 is an urban expansion area identified under the North-West Sub-regional Planning Framework for Perth, located within the City of Wanneroo. The area currently comprises market gardens and rural dwellings and includes high priority vegetation (considered to have the potential to include conservation-listed *Banksia* woodland Floristic Community Type 20a) and Bush Forever sites (Western Australian Planning Commission [WAPC] 2021). Under the East Wanneroo district structure plan, detailed flora surveys of remnant vegetation are required to inform the appropriate size and configuration of bushland retention within Precinct 3.

Coterra Environment, on behalf of the project proponent Satterley Property Group, engaged Ecoscape to undertake a biological survey of the Precinct 3 area, incorporating a Detailed and Targeted Flora and Vegetation, and a Basic fauna survey and targeted Black Cockatoo habitat assessment. The survey supplements a previous assessment by PGV Environmental (2023) that was undertaken to inform avoidance and mitigation measures that could be implemented in the course of the area's potential development.

1.2 SURVEY AREA

Portions of Precinct 3 which are under contract to Satterley Property Group (known as the 'survey area' in this report), are located within the City of Wanneroo on the Swan Coastal Plain (**Figure 1**). The survey area consists of mixed-use agriculture and rural residential land, including remnant bushland with a total area of 134.86 ha.

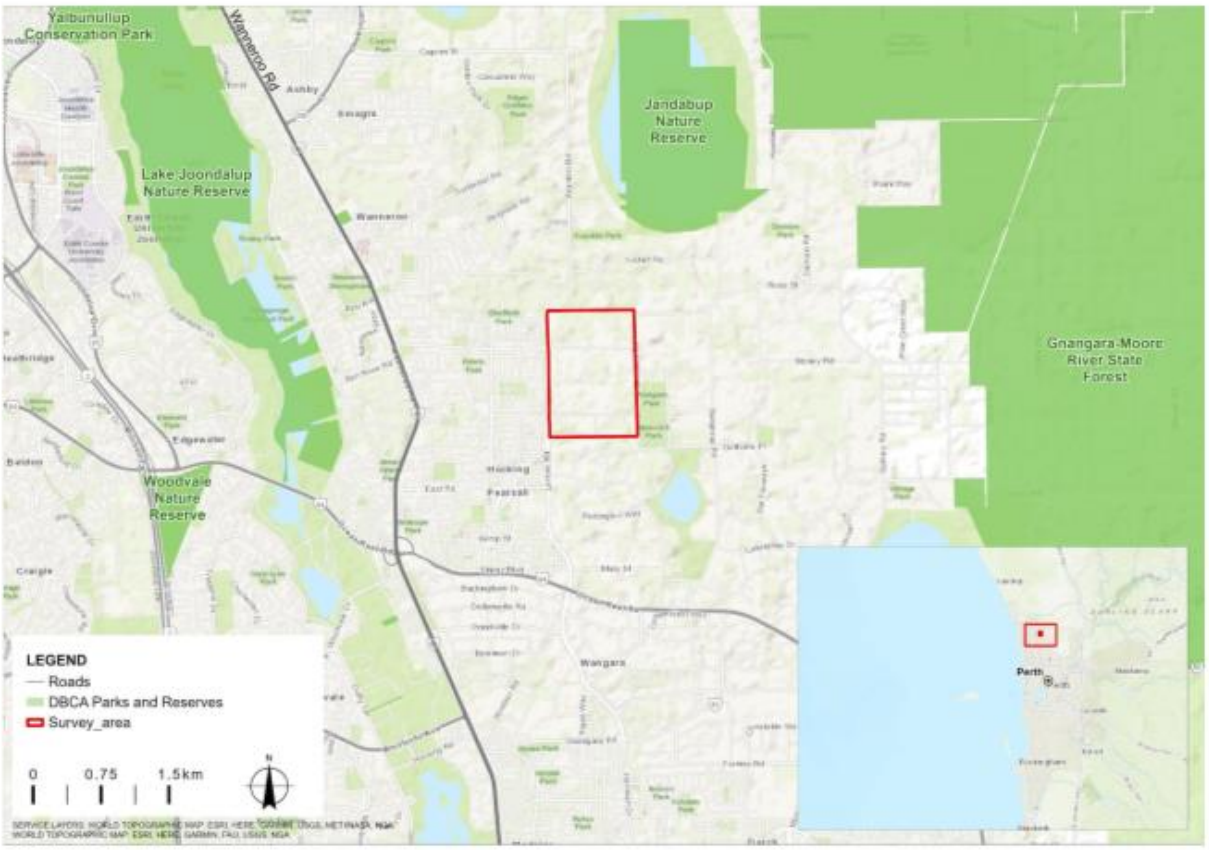

Figure 1: Survey area location

1.3 SURVEY REQUIREMENTS

The requirements of the flora and vegetation survey were to:

- undertake a single-season Detailed flora and vegetation survey, including targeted searches for conservation-listed flora and ecological communities
- map vegetation types, significant ecological communities and vegetation condition
- determine whether SCP20a '*Banksia attenuata woodlands over species rich dense shrublands (floristic community type 20a as originally described in Gibson et al. 1994)*' occurs within the survey area.

The requirements of the fauna survey were to:

- undertake a single-season Basic fauna survey
- map fauna habitat types
- undertake targeted Black Cockatoo habitat assessment.

1.4 COMPLIANCE

This biological survey was conducted in accordance with Commonwealth and State legislation and guidelines:

- Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act)
- Western Australian *Environmental Protection Act 1986* (EP Act)
- Western Australian *Biodiversity Conservation Act 2016* (BC Act)
- Western Australian *Biodiversity Conservation Regulations 2018*
- Department of Environment, Water, Heritage and the Arts (DEWHA 2009) *Matters of National Environmental Significance. Significant impact guidelines 1.1 - Environment Protection and Biodiversity Conservation Act 1999*
- Department of Sustainability Environment Water Population and Communities (DSEWPaC 2011a) *Survey guidelines for Australia's threatened mammals*
- DSEWPaC (2011b) *Survey guidelines for Australia's threatened reptiles*
- DEWHA (2010a) *Survey guidelines for Australia's threatened bats*
- DEWHA (2010b) *Survey guidelines for Australia's threatened birds*
- Department of Agriculture Water and the Environment (DAWE 2022a) *Referral guideline for 3 WA threatened black cockatoo species: Carnaby's Cockatoo, Baudin's Cockatoo and the Forest Red-tailed Black-cockatoo*
- Environmental Protection Authority (EPA 2019) *EPA Advice: Carnaby's Cockatoo in Environmental Impact Assessment in the Perth and Peel Region*
- Threatened Species Scientific Committee (TSSC 2016) *Approved conservation advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community*.

Summaries of the main Acts under which this assessment was conducted, and related criteria and definitions, are available in **Appendix One**.

As well as those listed above, the assessment complied with Environmental Protection Authority (EPA) requirements for environmental survey and reporting in Western Australia, as outlined in:

- EPA (2016a) *Technical Guidance – Flora and Vegetation Surveys for Environmental Impact Assessment*, known herein as the Flora and Vegetation Technical Guidance
- EPA (2020) *Technical Guidance – Terrestrial vertebrate fauna surveys for environmental impact assessment*, known herein as the Fauna Technical Guidance
- EPA (2016b) *Environmental Factor Guideline – Flora and Vegetation*
- EPA (2016c) *Environmental Factor Guideline – Terrestrial Fauna*
- EPA (2021) *Statement of environmental principles, factors, objectives and aims of EIA*.

Additional details (definitions and criteria) relevant to these works are available in **Appendix One**.

2 DESKTOP ASSESSMENT

2.1 PHYSICAL ENVIRONMENT

2.1.1 CLIMATE

The southwest of Western Australia is generally described as having a Mediterranean-type climate of mild, wet winters and warm to hot, dry summers. The climate of the region is strongly influenced by the position of a band of high pressure known as the sub-tropical ridge. For much of the year the ridge is located to the south allowing the east or south easterly winds to prevail. During the cooler months the ridge periodically moves to the north, allowing cold fronts to pass over the west coast and deliver much of the annual rainfall (Beard 1990).

According to the Köppen-Geiger climate classification, the survey area has a temperate climate with hot, dry summers (Class Csa) (Peel, Finlayson & McMahon 2007). This classification is considered to represent a Mediterranean climate where average summer maximum temperatures exceed 22°C and the average coldest month maximum is between 18° and -3°C, and summer rainfall is less than one third of winter rainfall.

The closest Bureau of Meteorology (BoM) station with long term rainfall records is Wanneroo (BoM 2024a station 009105, operating since 1905) which is located approximately 5 km northwest of the survey area. The mean annual rainfall is 786.4 mm falling in winter (May – August). The rainfall during the 6-month period prior to the field survey was 96.73% of the long-term average for this period.

The closest Bureau of Meteorology (BoM) station with long term temperature records is Pearse RAAF (BoM 2024a station 009053, operating since 1941) which is located approximately 20km northeast of the survey area.

January is the hottest month with a mean maximum temperature of 33.6°C and minimum of 17.0°C. August is the coldest month with a mean maximum of 18.5°C and minimum of 8.2°C.

Figure 2 shows the average rainfall and temperatures of the survey area, with rainfall for the year preceding the field survey. Long-term climate data (1900 to 2023) shows a decreasing trend in total annual rainfall for the Swan Coastal Plain with an average loss of 10 to 40 mm per decade (BoM 2023).

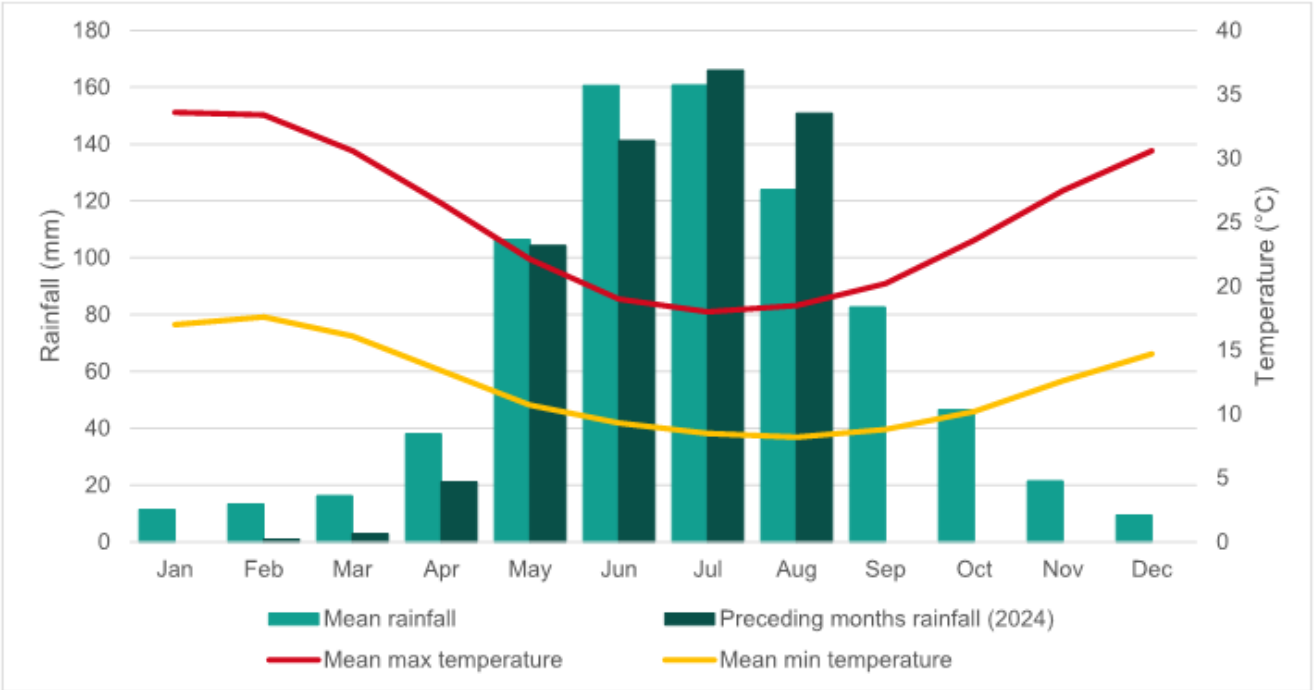

Figure 2: Rainfall and temperature data for the survey area (BoM 2024a)

2.1.2 LAND SYSTEMS

According to the Department of Primary Industries and Regional Development (DPIRD 2020) soil landscape mapping, the survey area is within the Karrakatta Sand Yellow phase land system. This land system is described as "Low hilly to gently undulating terrain. Yellow sand over limestone at 1-2 m. *Banksia* spp. woodland with scattered emergent *E. gomphocephala* and *E. marginata* and a dense shrub layer".

2.1.3 GEOLOGY

According to the 1:50,000 Geological series map for Perth (DMIRS 2020), the survey area intersects two geological units:

- S7: pale and olive-yellow medium to coarse-grained sub-angular quartz sand (134.77 ha, 99.93%)
- Csp: dark strong brown clay of alluvial origin with variable silt content and no sand (0.09 ha, 0.07%).

2.1.4 WETLANDS AND DRAINAGE

The survey area is located in the Swan Avon Lower Swan catchment (Landgate 2023). No drainage features or wetlands occur in the survey area, however, several wetlands are located nearby (**Map 2**), including:

- Badgerup Lake, located approximately 0.6 km to the southeast
- Jandabup Lake, located approximately 0.9 km to the northeast
- Lake Joondalup, located approximately 2.4 km to the west.

2.1.5 GROUNDWATER DEPENDENT ECOSYSTEMS

The Groundwater Dependent Ecosystems Atlas (BoM 2024b) indicates that the survey area is considered as low potential for terrestrial Groundwater Dependent Ecosystems (GDEs) to occur, with an Inflow Dependent Ecosystem (IDE) likelihood of 10 (low).

However, Banksia woodlands on the Swan Coastal Plain are considered to be groundwater dependent (Eamus et al. 2006).

2.1.6 ENVIRONMENTALLY SENSITIVE AREAS

The survey area intersects one mapped Environmentally Sensitive Area (ESA) in the north, corresponding with Bush Forever site 471, totalling 6.5 ha (shown on **Map 2**).

The next closest ESAs are:

- 0.2 km southeast, corresponding with Bush Forever site 327
- 0.8 km northeast, corresponding with Jandabup Nature Reserve.

2.1.7 CONSERVATION LANDS

The survey area does not intersect any legislated lands managed for conservation. The nearest conservation estates (shown on **Map 2**) are:

- Jandabup Nature Reserve, located approximately 0.8 km to the northeast
- Lake Joondalup Nature Reserve, located approximately 2.2 km to the west
- Gnangara-Moore River State Forest (managed by the DBCA), located approximately 2.5 km to the east.

2.1.8 LAND USE HISTORY

The survey area and broader East Wanneroo area have been historically rural areas, supporting market gardens, agriculture, sand quarrying, equestrian and rural residential areas, as well as conservation and crown land reserves (DPIRD 2018). Land use change has occurred over time with the expansion of urban residential housing and commercial businesses into rural areas.

2.2 BIOLOGICAL ENVIRONMENT

2.2.1 BIOGEOGRAPHIC REGION

Biogeographic regions are delineated on the basis of similar climate, geology, landforms, vegetation and fauna and are defined in the Interim Biogeographical Regionalisation for Australia (IBRA) (Department of Agriculture Water and the Environment 2020).

The survey area is located in the Swan Coastal Plain IBRA region in the Swan Coastal Plain subregion (SWA2), described by (Mitchell, Williams & Desmond 2002) as:

> *The Swan Coastal Plain is a low lying coastal plain, mainly covered with woodlands. It is dominated by Banksia or Tuart on sandy soils, Casuarina obesa on outwash plains, and paperbark in swampy areas. In the east, the plain rises to duricrusted Mesozoic sediments dominated by Jarrah woodland. The climate is Warm Mediterranean. Three phases of marine sand dune development provide relief. The outwash plains, once dominated by C. obesa-marri woodlands and Melaleuca shrublands, are extensive only in the south. The Perth subregion is composed of colluvial and aeolian sands, alluvial river flats, coastal limestone. Heath and/or Tuart woodlands on limestone, Banksia and Jarrah- Banksia woodlands on Quaternary marine dunes of various ages, Marri on colluvial and alluvials. Includes a complex series of seasonal wetlands and also includes Rottnest, Carnac and Garden Islands etc. Rainfall ranges between 600 and 1000 mm annually and the climate is Mediterranean. The subregional area is 1, 333, 901 ha.*

2.2.2 PRE-EUROPEAN VEGETATION

During the 1970s, John Beard and associates conducted a systematic survey of native vegetation, describing the vegetation systems in Western Australia at a scale of 1:250,000 in the south-west and at a scale of 1:1,000,000 in less developed areas.

Beard's vegetation maps attempted to depict the native vegetation as it was presumed to be at the time of settlement and is known as the pre-European vegetation type and extent. Beard's vegetation maps have since been developed in digital form by Shepherd, Beeston & Hopkins (2002), updated by DPIRD (2019) and published by the DBCA (2019). This mapping indicates that the survey area intersects two pre-European vegetation units:

- Association 949: Bassendean; Other *Acacia*, *Banksia*, Peppermint, Cypress Pine, *Casuarina*, York gum *Acacia* spp., *Banksia* spp., *Agonis flexuosa*, *Callitris* spp., *Allocasuarina* spp., *Eucalyptus loxophleba*.
- Association 6: Spearwood; Jarrah, Marri and Wandoo; *Eucalyptus marginata*, *Corymbia calophylla*, *E. wandoo.*

The pre-European vegetation associations identified from the survey area and their pre-European and current extents (based on vegetation statistics from 2018) are listed in **Table 2** and shown on **Map 1**.

Table 2: Pre-European vegetation association representation (DBCA 2019)

Region	Vegetation association	Original extent (ha)	Current extent (ha)	% remaining
Western Australia	949	218,193.94	123,104.02	56.42
	6	56,343.01	13,362.25	23.72
IBRA biogeographic region (SWA)	949	209,983.26	120,287.93	57.28
	6	56,343.01	13,362.25	23.72
IBRA biogeographic sub-region (SWA02)	949	184,475.82	104,128.96	56.45
	6	56,343.01	13,362.25	23.72
LGA (City of Wanneroo)	949	37,138.40	17,196.34	46.30
	6	12,662.10	2,777.67	21.94

2.2.3 HEDDLE VEGETATION COMPLEXES

Heddle *et al.* (1980) divided the Swan Coastal Plain into medium to large areas based on soil and landform units, with the vegetation within these areas defined in terms of floristic composition, growth-form dominance, species composition and stratal structure.

According to Heddle *et al.* (1980), one vegetation complex intersects the survey area, Karrakatta Complex-Central and South, described as predominantly open forest of *Eucalyptus gomphocephala*, *Eucalyptus marginata*, *Corymbia calophylla* and woodland of *Eucalyptus marginata* and *Banksia* species with *Agonis flexuosa* co-dominant south of the Capel River.

The pre-European and current extent of the vegetation complex is 52,943.69 ha and 12,589.61 ha, respectively (based on data from 2016). The proportion of the complex remaining is 23.8% (Webb et al. 2016).

2.2.4 THREATENED AND PRIORITY ECOLOGICAL COMMUNITIES

Threatened and Priority Ecological Communities intersecting the survey area and nearby were identified by a *Protected Matters Search Tool* (PMST) search (DCCEEW 2024, using a 10 km buffer) and DBCA database search request (search reference 49-082 using a 10 km buffer). The results of the PMST search are provided in **Appendix Five**.

The results of these searches are indicated in **Table 3** and, for the DBCA data, shown on **Map 2**. Some EPBC-listed TECs are known by different, similar names or are listed as PECs within Western Australia; these equivalents are indicated in **Table 3**.

One TEC (the *Banksia Woodlands of the Swan Coastal Plain ecological community*, hereafter referred to as the Banksia Woodlands TEC) is known to occur within the survey area from the DBCA database search results and from a previous survey (PGV Environmental 2023) that intersects a large portion of the survey area.

Table 3: TECs and PECs identified by PMST and DBCA database searches

PMST	DBCA database	Ecological Community	C'wealth Status	WA status
'Known' (in buffer area)	X	*Assemblages of plants and invertebrate animals of tumulus (organic mound) springs of the Swan Coastal Plain* **Equivalent to:** • *Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain)*	EN	BCA – CR
'Likely'	X	*Banksia Woodlands of the Swan Coastal Plain ecological community* **Incorporates:** • *Banksia attenuata woodlands over species rich dense shrublands (floristic community type 20a as originally described in Gibson et al. 1994)* • *Low lying Banksia attenuata woodlands or shrublands* (SCP21c) • *Swan Coastal Plain Banksia attenuata - Banksia menziesii woodlands* (SCP23b) • *Banksia ilicifolia woodlands, southern Swan Coastal Plain* (SCP22)	EN BCA – CR P3 – PEC P3 – PEC P3 – PEC	P3 – PEC
	X	*Callitris preissii (or Melaleuca lanceolata) forests and woodlands of the Swan Coastal Plain (floristic community type 30a as originally described in Gibson et al. 1994)*		BCA – CR
	X	*Coastal shrublands on shallow sands* (SCP29a)		P3 – PEC
'May'		*Empodisma peatlands of southwestern Australia*	EN	
'Likely' (in buffer area)		*Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion* (SCP 26a)	CR	CR
	X	*Northern Spearwood shrublands and woodlands* (SCP24)		P3 – PEC

PMST	DBCA database	Ecological Community	C'wealth Status	WA status
	X	*Southern Eucalyptus gomphocephala-Agonis flexuosa woodlands* (SCP25)		P3 – PEC
'Likely'	X	*Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community*	CR	P3 – PEC
		Equivalent to: • *Tuart (Eucalyptus gomphocephala) woodlands of the Swan Coastal Plain*		

Some EPBC Act-listed TECs have detailed assessment methodologies to determine if vegetation is representative; these are summarised in **Appendix Three**.

2.2.4.1 Floristic Community Types

Floristic community types (FCTs) were identified by Gibson *et al.* (1994) to describe the major regional vegetation communities of the southern Swan Coastal Plain (SCP) based on species composition. The study sampled remnant bushland from 509 quadrats on the SCP, recording a total of 1,485 flora taxa, including 172 weeds. The presence or absence of species within quadrats were used to define floristic groupings using multivariate analysis techniques. The analysis identified four 'super' groups related to major geomorphological units and 30 floristic community types with 13 subtypes (total of 43 FCTs). The FCTs were strongly correlated with seasonal moisture regime and geomorphology; three FCTs were located on the heavy soils of the eastern coastal plain, 16 in seasonal wetlands, four on the Bassendean Dunes and seven in the Spearwood and Quindalup systems (1994)(*ibid.*).

Several FCTs are Threatened or Priority-listed ecological communities under the Western Australian BC Act and DBCA PEC list, including those listed above in **Table 3** which are synonymous with the EPBC-listed Banksia woodlands TEC.

According to a previous survey (PGV Environmental 2023), vegetation within the survey area most likely corresponds with SCP28 *Spearwood Banksia attenuata or Banksia attenuata – Eucalyptus marginata woodlands*, which is amongst the list of FCTs that (with other vegetation types not defined by FCTs) comprise the Banksia Woodlands TEC (TSSC 2016).

2.2.5 THREATENED AND PRIORITY FLORA

2.2.5.1 EPBC-listed Threatened Flora

The PMST search (as above) identified 20 EPBC-listed TF from within the 10 km search buffer area, including three 'species or habitat known to occur within area', 11 as 'species or habitat likely to occur within area' and six as 'species or species habitat may occur within area'.

2.2.5.2 DBCA Database Search

The requested DBCA databases search (search reference 79-0824FL) was conducted using a 10 km buffer around the supplied shapefiles. The results incorporate the TPFL List, taken from Threatened and Priority Flora Report Forms and DBCA surveys (eight species), and WA Herbarium, taken from vouchered specimens held in the Western Australian Herbarium (38 species), totalling 38 species identified by the DBCA database search. **Map 2** shows the locations of conservation-listed flora identified by the DBCA database search.

The combined database searches identified fifty species, listed in **Table 26** in **Appendix Four** and shown on **Map 2**, consisting of 24 TF, six P1, five P2, nine P3 and six P4. Sixteen of the TF species identified in the PMST search did not have a DBCA record, indicating that their inclusion is probably based on the likelihood of their habitat occurring, rather than species presence.

2.2.5.3 Previous Surveys

The 2022 PGV Environmental survey (2023) that corresponds with a large portion of the current survey area included targeted searches for Threatened and Priority flora. No TF or PF were recorded during the survey.

2.2.5.4 Threatened and Priority Flora Likelihood Assessment

Ecoscape conducted a likelihood assessment to identify the TF and PF species that have potential to occur within the survey area. Information to assess the likelihood of a species occurring includes the ecology as listed on *FloraBase* (2024), incorporating an assessment of habitats likely to be present in the survey area.

The attributes taken into consideration were:

- broad soil type usually associated with the species
- broad landform usually associated with the species
- usual vegetation (characteristic species) with which the species is usually associated
- species having previously been recorded near the survey area ('proximity' or 'close proximity'; see **Table 4**) taking locational accuracy into consideration
- time since recorded (i.e. within the previous 25 years), taking into consideration land use changes since collection
- reliability of record: species identified by only a TPFL record, without an accompanying verified vouchered specimen, may have been incorrectly identified or been subject to taxonomic updates since the record was entered
- number of records for the species
- if the record is for a not naturally occurring population (planted).

The likelihood rating is assigned using the categories listed in **Table 4**.

Table 4: Categories for likelihood of occurrence of TF and PF

Likelihood Category	Criteria
Known to occur	Species previously recorded within the survey area.
Likely to occur	Suitable habitat is known to occur within the survey area and multiple records of the species exist within close proximity*
May occur	Suitable habitat is expected to occur within the survey area and the species has previously been recorded within proximity**
Unlikely to occur	Suitable habitat is expected to occur within the survey area however previous records are limited and/or historic and/or not in proximity** OR Suitable habitat is not expected to occur within the survey area although previous records exist in proximity**
Very Unlikely to occur	Suitable habitat is not expected to occur in the survey area AND/OR previous records are limited and/or historic and/or not in proximity**

* close proximity = 2.5 km (¼ of the distance of the database search buffer)
** proximity = 5 km (½ of the distance of the database search buffer)

The likelihood assessment is available in **Table 26** in **Appendix Four**. None have been previously recorded from within the survey area. One P4 and one P2 were identified as being Likely to occur and two P1, two P3 and one P4 as May Occur, based on the information available during the desktop assessment and were prioritised for field survey.

The likelihood of occurrence was re-evaluated following the field survey when actual survey area characteristics (vegetation types, vegetation condition, visibility for individual species) were better understood, and the level of survey effort was considered. The post-survey likelihood is also incorporated into this table and discussed further in **Section 5.1.1.2**.

2.2.6 FLORA ASSEMBLAGE

The previous survey undertaken by PGV Environmental (2023) recorded a total of 168 flora taxa, including 38 introduced species.

A *Dandjoo* data search (DBCA 2024) identified that 795 unique species have been identified as occurring within an approximate 9 km radius of the survey area (9 km buffer around an approximate central point within

the survey area). The search results are provided in **Appendix Five**. The number of conservation-listed flora identified using this data search (62) is larger than that of the paid DBCA database search (38; **Section 2.2.5**), possibly as a result of the search areas not matching precisely, which is a limitation of search types available on this platform.

2.3 THREATENED AND PRIORITY FAUNA

The combined PMST and DBCA database search results are incorporated into **Table 27** in **Appendix Four**.

Species identified by these database searches that are excluded from the field survey and further assessments (including likelihood assessments) are listed in **Table 28** in **Appendix Four** along with the reason for their exclusion (marine species where suitable habitat does not occur within the survey area; invertebrates that are not within the scope of the survey; marine, migratory or shorebirds that may overfly the survey area but are unlikely to occur within it).

Such excluded species are not further referenced in this document.

2.3.1.1 EPBC-listed Threatened Fauna

The *Protected Matters Search Tool* (PMST) search (DCCEEW 2024, using a 10 km buffer), identified 19 species as having been recorded or having potential to occur within the search area buffer i.e. 'species or species habitat known to occur within the area' (or buffer) or 'species or species habitat likely to occur within area' (or buffer), consisting of three mammals and 16 birds.

2.3.1.2 DBCA Database Search

A search of the DBCA databases was conducted (search reference: 30-1124FA) using a 10 km buffer around the survey area. Thirty-seven conservation-listed terrestrial vertebrate species were identified as having previously been recorded from within the search area buffer, consisting of seven mammals, 29 birds and one reptile (shown on **Map 3**).

2.3.1.3 Previous Surveys

The 2022 PGV Environmental survey (2023) included a Basic fauna survey and targeted Black Cockatoo habitat assessment. Two fauna habitat types were mapped, described as Open Woodland and Cleared/Developed, both of which intersect the survey area. Open Woodland was assessed as suitable habitat for Black Cockatoos. A fauna inventory was not included in the PGV Environmental report.

2.3.1.4 Threatened and Priority Fauna Likelihood Assessment

The likelihood of conservation-listed fauna species, as identified by the database and literature searches, occurring within the survey area was assessed using the following criteria:

- suitability of habitat types likely to be present within the survey area
- distance between previous record of conservation-listed species and the survey area
- frequency and number of records in the region
- date of record of conservation-listed species (recent or historical)
- the record is naturally occurring (not from a sanctuary or translocated population).

The following were also taken into consideration during the assessment:

- sufficiency of information
- behavioural and ecological characteristics such as cryptic behaviours, size and mobility of species
- record certainty.

The categories of likelihood of occurrence, assessed using the above criteria, are shown in **Table 5**.

Table 5: Categories for likelihood of occurrence of conservation-listed fauna

Likelihood Category	Criteria
Known to occur	Species previously recorded within the survey area within 25 years.
Likely to occur	Suitable habitat is expected to occur within the survey area and records of the species within 25 years exist within close proximity*
May occur	Suitable habitat is expected to occur within the survey area and historic records of the species exist within close proximity* OR Suitable habitat is expected to occur within the survey area and recent (<25yrs) records exist within the database search buffer but not in close proximity*
Unlikely to occur	Suitable habitat is expected to occur within the survey area however previous records are limited and/or historic and/or not in proximity** OR Suitable habitat is not expected to occur within the survey area and recent (<25yrs) records do not occur in close proximity*
Very Unlikely to occur	Suitable habitat is not expected to occur in the survey area AND/OR previous records are limited and/or historic and/or not in proximity**

* close proximity = 2.5 km (¼ of the distance of the database search buffer)

** proximity = 5 km (½ of the distance of the database search buffer)

The likelihood of species occurring within the survey area are indicated in **Table 27** in **Appendix Four**. One mammal is known to occur in the survey area, *Isoodon fusciventer* (P4). Two species were assessed as being 'likely to occur' within the survey area:

- Carnaby's Cockatoo (*Zanda latirostris*; EPBC and BC Act – Endangered)
- Forest Red-tailed Black Cockatoo (*Calyptorhynchus banksii subsp. naso*; EPBC- and BC Act – Vulnerable).

The likelihood of occurrence does not take into consideration factors such as frequency that a species occurs (or may occur), the duration that such species occupies (or may occupy) the survey area or dependence on habitat or resources within the survey area. Highly mobile species potentially only occur within (or for birds, overflying) the survey area for very brief periods and/or on very infrequent intervals. If a previous observation included in the database search records corresponds with such an event the species is listed as 'Recorded'. If such a transient visitation is possible in the future it is considered as 'Likely' to occur'.

Following the field survey, when actual survey area characteristics are better understood and the level of survey effort was considered, the likelihood of occurrence was re-evaluated. The post-survey likelihood is also incorporated into this table and discussed further in **Section 5.3.2.1**, including providing an indication of dependence of species on the habitat and resources available within the survey area.

2.3.1.5 Black Cockatoos

The survey area is located:

- 15.0 km southwest of the nearest confirmed Carnaby's Cockatoo breeding area (DBCA 2018a)
- 9.0 km from an unconfirmed (indicative) Carnaby's Cockatoo breeding area (DBCA 2018b)
- 2.2 km west of confirmed Carnaby's Cockatoo roost sites (DBCA 2018c)
- 1.2 km west of unconfirmed (indicative) Carnaby's Cockatoo roost sites (DBCA 2018d)
- 530 m west of Forest Red-tailed Black Cockatoo roost site (DBCA database search reference 30-1124FA).

2.4 RELEVANT LITERATURE

The following documents have been identified as having relevance to the current survey:

- PGV Environmental (2023a), *East Wanneroo Precinct 3 Flora, Vegetation and Fauna survey.* This survey intersects a large portion of the survey area. No TF or PF were recorded. Four vegetation types were mapped, including vegetation corresponding with SCP28 and the Banksia woodlands TEC. Two fauna habitat types were mapped, including habitat for Black Cockatoos.

- SLR Consulting (2023) *East Wanneroo Environmental Assessment Report*. This survey was conducted nearby in Precinct 7 within the East Wanneroo District Structure Plan. One PF was recorded from the survey area (*Jacksonia sericea*, P4). No TF were recorded. The survey also identified Black Cockatoo habitat, mostly of Very High and High quality.
- Anders Environmental Consulting (2022) *Flora and Vegetation Survey: East Wanneroo Proposed Alignment.* This survey was conducted nearby along a proposed alternative pipeline alignment between Alkimos and the Wanneroo Reservoir. Two vegetation types, including one PEC (SCP22), was mapped within the survey area and no TF or PF were recorded.
- Emerge Associates (2018) *Environmental Assessment Study: East Wanneroo District Structure Plan.* This survey was undertaken within the East Wanneroo District Structure Plan area which includes the current survey area. A preliminary vegetation assessment identified the potential presence of the SCP20a TEC and the Banksia Woodlands TEC within the current survey area.

2.5 PREVIOUS SURVEYS

Two surveys are known to have been partially or wholly conducted within the current survey area:

- PGV Environmental (2023) *East Wanneroo Precinct 3 Flora, Vegetation and Fauna survey.*
- Emerge Associates (2018) *Environmental Assessment Study: East Wanneroo District Structure Plan.*

2.5.1 IBSA DATA SEARCH

The Department of Water and Environmental Regulation's (DWER's) *Index of Biodiversity Surveys for Assessments (IBSA)* Portal (DWER 2024) was searched for recent environmental surveys in the vicinity of the survey area.

The search, conducted on 3 February 2025, identified eight environmental surveys that have been conducted within 5 km of the survey area. None of the listings had data accessible for review i.e. contained metadata only.

The following documents had relevance to current survey:

- Biologic (in prep.) Marigin*iup Road and Old Yanchep Road Terrestrial Vertebrate Fauna Survey and Black Cockatoo Habitat Assessment.* Unpublished report prepared for the Water Corporation.
- One Tree Botanical Pty Ltd. (2023) *Lot 24 Mary Street, Wanneroo & Mather Reserve (53163), Neerabup Vegetation Monitoring Programme 2022.* Unpublished report for the City of Wanneroo.
- 360 Environmental (2022) *Alkimos Seawater Desalination Plant: Alkimos Pipeline Corridor Black Cockatoo Hollow Inspection.* Unpublished report prepared for the Water Corporation.
- Focus Vision Consulting (2021) *Biological Assessment Smart Freeways – Mitchell Southbound*. Unpublished report for Main Roads Western Australia
- Stantec Australia Pty Ltd (2020) *Alkimos Seawater Desalination Plant: Terrestrial Fauna Consolidation*. Unpublished report prepared for the Water Corporation.
- Stantec Australia Pty Ltd (2020) *Alkimos Seawater Desalination Plant: Flora and Vegetation Consolidation.* Unpublished report prepared for the Water Corporation.
- AECOM (2020) *Flora, Vegetation, Fauna and Targeted Black Cockatoo Survey.* Report prepared for Water Corporation.
- AECOM (2018) *Flora, Vegetation and Fauna Assessment*. Report prepared for Water Corporation.

2.5.2 OTHER LITERATURE

The following documents have been identified as having relevance to the current survey:

- Western Australian Planning Commission (2021) *East Wanneroo District Structure Plan.*

3 METHODS

3.1 GUIDING PRINCIPLES

The flora and vegetation survey was conducted as a Detailed survey according to the Flora and Vegetation Technical Guidance (EPA 2016a). The EPA considers that a Detailed survey requires:

- a comprehensive survey design, including giving consideration to the survey timing that should be conducted during the primary season of survey for the bioregion and disturbance events, and the potential requirement for supplementary surveys
- a minimum of three quadrats (in proportion to the extent of the vegetation unit), located throughout each preliminary vegetation types sampled throughout its geographic range, with additional quadrats and rescoring during supplementary surveys to clarify vegetation unit boundaries
- regional surveys if there is insufficient information available (identified during the desktop assessment) to provide local and regional context
- the survey may include a number of sampling techniques including quadrats, relevés, transects and traverses, as well as opportunistic observations
- the flora inventory should be comprised of data collected from quadrats and relevés, supplemented by opportunistic observations, systematic surveys and targeted inspections of various habitat areas
- it may be appropriate to increase survey effort in areas of unusual habitat
- sampling sites that are placed at representative locations throughout the survey area considering landform, geology, elevation, slope, aspect, surface or groundwater expression and soil type, as well as vegetation structure, composition and condition.

Targeted searches were also conducted in areas of habitat suitable for TF and PF identified during the desktop assessment and previous surveys as having potential to occur.

The fauna and fauna habitat survey was conducted as a Basic survey according to the Fauna Technical Guidance (EPA 2020). The EPA recommends a Basic survey should:

- be conducted as a low intensity survey to gather broad fauna and habitat information
- verify the adequacy of the desktop assessment
- map, describe and photograph habitats
- record opportunistic fauna observations
- identify possible future survey site locations, access and logistics
- determine if a Detailed survey is required.

Targeted surveys were also conducted to gather information on significant fauna and habitats. Black Cockatoos and their habitat were specifically targeted.

3.2 FLORA AND VEGETATION FIELD SURVEY

3.2.1 FIELD SURVEY METHODS

The methods utilised during the field survey followed those outlined in the Flora and Vegetation Technical Guidance (EPA 2016a), conducted as a single-phase Detailed survey.

Conservation criteria used in this assessment are outlined in **Table 15**, **Table 16** and **Table 17** in **Appendix One**.

Survey method details are outlined below.

3.2.1.1 Floristic Quadrats

Floristic quadrat ('quadrat') locations were selected using aerial photography, environmental values and field observations to represent the vegetation values existing at the site. The unmarked quadrats were 10 m x 10 m in dimension, as required according to the Flora and Vegetation Technical Guidance (EPA 2016a).

Where the vegetation consisted of a narrow linear corridor, quadrats were linear but of the same overall size i.e. 100 m².

The following information was collected from within each quadrat:

- observer
- date
- quadrat/site number
- GPS location (GDA94) of the northwest corner
- digital photograph (spatially referenced with a reference number), taken from the northwest corner, looking diagonally across the quadrat
- broad soil type and colour
- topography
- list of flora species recorded with the average height and total cover within the quadrat for each species
- vegetation description (as per below)
- vegetation condition.

At least three quadrats per vegetation type were recorded for the Detailed survey where there was sufficient extent to do so. Quadrat locations are displayed on Map 5.

3.2.1.2 Targeted Searches

Threatened and Priority Flora identified during the desktop analysis and previous surveys as known or having potential to occur were targeted for searches in areas of potential habitat. Targeted searches were conducted in potentially suitable habitat of target species, with the remainder of the site opportunistically searched during site traverses.

The locations of all targeted taxa collected were recorded using a handheld GPS with the following data recorded:

- observer, date and time
- reproductive status and other features such as health of plants, percentage flowering and fruiting
- local abundance/population size and/or population boundary, including outside the development envelopes where possible
- landform
- brief vegetation community description
- representative photos of each species and habitat
- collection of representative specimens.

3.2.1.3 Introduced Species

Introduced species (weeds) were recorded during the collection of the overall flora inventory.

3.2.1.4 Vegetation Description and Classification

Vegetation was described from each of the quadrats using the height and estimated cover of dominant and characteristic species of each stratum based on the National Vegetation Information System, recorded at Level V (NVIS Technical Working Group & DotEE 2017) (**Table 18** and **Table 19** in **Appendix Two**). Up to three species per stratum from each stratum (upper, mid and ground) were used to formulate vegetation descriptions for each quadrat and each vegetation type.

Vegetation type descriptions were created by combining quadrat descriptions and modifying, where necessary, based on the wider vegetation. Vegetation codes for these were formulated using the characteristic species of the highest stratum within the vegetation type that had >2% cover (i.e. not scattered) if present, with the first series of letter codes referring to the component species (upper case first letter referring to the genus, lower case one or two letters referring to the species, with the upper case letters at the end referring to the stratum structure e.g. **BaLOF** refers to ***B**anksia **a**ttenuata* **l**ow **o**pen **f**orest.

3.2.1.5 Vegetation Condition Assessment

Vegetation condition was assessed broadly and continuously throughout the survey area and at each quadrat using the Vegetation Condition Scale for the Southwest Botanical Province (EPA 2016a) (**Table 20** in **Appendix Two**). As quadrats are located in the best condition parts of a vegetation type, the condition rating of the quadrat may not match that of the broader vegetation type due to the scale of mapping.

3.2.1.6 Field Survey Timing

The field survey was conducted during 17-19 September 2024 which is within the optimal period for a primary survey within the bioregion according to the Flora and Vegetation Technical Guidance (EPA 2016a).

3.2.2 DATA MANAGEMENT AND ANALYSIS

3.2.2.1 Taxonomic Plant Identification

Any plants that could not be identified with certainty in the field, having potential to be conservation-listed, introduced species and having significance according to the Flora and Vegetation Technical Guidance (EPA 2016a) were collected during the field survey using Western Australian Herbarium collecting protocols.

The majority of post-survey plant collection identification was undertaken by Ecoscape taxonomists (primarily Stephen Kern) using relevant literature, taxonomic keys and reference specimens held at the Western Australian Herbarium (WAH), including seeking assistance from specialist taxonomists where necessary.

3.2.2.2 Post-survey Likelihood Assessment

Following the field survey, a post-survey likelihood assessment was conducted to identify conservation-listed species that have potential to occur on site. This assessment was based on survey results, survey effort and habitat identified within in the survey area.

3.2.2.3 Floristic Analysis

PATN© software (Blatant Fabrications Pty Ltd 2013) was used to undertake statistical analysis to generate floristic groups using the data collected from the quadrats and relevés, in order to better understand local significance of floristic units. PATN analysis has been used for several local floristic analyses including Gibson *et al.* (1994) for the Swan Coastal Plain.

PATN is a multivariate analysis tool that generates estimates of association (resemblance, affinity, distance) between sets of objects described by a suite of variables (attributes) and classifies the objects into groups and condenses the information and displays the patterns in the data graphically. It offers a choice of data transformations prior to multivariate analysis.

Floristic groups, identified using a dendrogram output of the analysis, are used as a tool to inform vegetation type groups at various levels and scales.

For this project a variety of analyses were run. The most informative analysis used the Bray Curtis similarity coefficient for rows (species) and columns (sites) as this provides a good estimation of association for ecological applications (Blatant Fabrications Pty Ltd 2013). For this analysis we used a simple square root transformation of cover values for each species.

Interpretation of these purely floristic groups into recognisable and mappable on-ground units is a tool used to identify broad vegetation types. Generally, quadrats that are closely floristically related on the dendrogram form identifiable vegetation units, however, interpretation is frequently required for imperfect results. Vegetation types are therefore determined as a combination of floristic analysis and on-ground interpretation using dominant and characteristic species.

3.2.2.4 Floristic Community Type Analysis

Quadrat data recorded during the survey was incorporated into the Gibson *et al.* (1994) dataset. Reconciliation of flora species names was undertaken to ensure consistency of nomenclature as best possible. For this

analysis we used presence/absence (0/1) data for each species. The resulting dendrogram output was used to determine the correct placement of survey area quadrats within Floristic Community Types (FCTs).

3.2.2.5 TEC Assessment Criteria

Vegetation potentially representative of the Banksia Woodlands TEC was assessed against the criteria outlined in the Approved Conservation Advice for the community (TSSC 2016). Each indicatively mapped occurrence, and areas of suitable vegetation that was not indicatively mapped, had at least one quadrat or, where clearly not representative, a descriptive waypoint and photograph recorded to document the vegetation.

Reasons that vegetation was considered clearly not representative of the TEC in an indicatively mapped occurrence include the vegetation being a different type to that of the TEC, vegetation condition clearly not meeting the condition thresholds (i.e. Degraded-Completely Degraded condition), and extents too small for inclusion.

3.2.2.6 Adequacy of Sampling

In order to demonstrate adequacy of sampling, a species accumulation curve was generated by the software Species Diversity and Richness IV (Pisces Conservation Ltd 2010) using five random selections of sample order, using quadrat data only.

3.3 FAUNA FIELD SURVEY

The methods utilised during the field survey followed those outlined in the Fauna Technical Guidance (EPA 2020), conducted as a Basic survey. Conservation criteria used in this assessment are included in **Appendix One**.

3.3.1 FAUNA SURVEY METHODS

The Basic fauna survey incorporated a number of survey techniques as per the Terrestrial Fauna Technical Guidance including habitat assessment, active searches (day time), searches for secondary evidence such as scats and tracks, as well as opportunistic searches.

Fauna species were identified opportunistically based on sightings, calls, remains, diggings and other signs. Potential habitats for conservation significant species were identified and evaluated (see **Section 3.3.1.2**) and their likelihood of occurrence re-assessed.

3.3.1.1 Bird Survey Methodology

Bird surveys were conducted as 20-minute point searches by an experienced ornithologist during peak periods of bird activity (early morning, as per Birdlife Australia standard methodology). Bird surveys (including opportunistic sampling during traverses within the survey area) were conducted in all habitat types and targeted conservation-listed species assessed as 'likely to occur' during the desktop likelihood assessment (see **Section 3.3.2.1**). Birds were identified from their call signatures, from observations of live individuals and other signs (feathers).

3.3.1.2 Fauna Habitat Assessment

The fauna habitats present within the survey areas were identified and mapped. Fauna habitats were described as an area which is distinguishable from its surrounding area by its landform, vegetation and fauna assemblage occupying the area. In addition, its likelihood to harbour specialised fauna species which are not found in adjacent areas was taken into consideration.

The following information was used to identify and map all fauna habitats within the survey area:

- previous fauna habitat mapping
- land systems
- vegetation type and condition mapping
- aerial imagery
- landforms

- soil characteristic
- fauna assemblage information.

The composition and characteristics of each fauna habitat type was recorded, including noting suitability for various fauna suites or conservation-listed species. Habitat types were delineated in the field and digitised following the field survey.

3.3.2 TARGETED SURVEY METHODS

3.3.2.1 Black Cockatoo Assessment Methods

'Black Cockatoos' refer to three threatened Western Australian species: *Zanda latirostris* (Carnaby's Cockatoo; EPBC- and BC Act EN), *Zanda baudinii* (Baudin's Cockatoo; EPBC- and BC Act EN) and *Calyptorhynchus banksii naso* (Forest Red-tailed Black Cockatoo; EPBC- and BC Act VU). The survey area is within the mapped distribution of Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo (DAWE 2022a).

Potential and active (actual) Black Cockatoo breeding trees were assessed as per Commonwealth guidance (DAWE 2022a) and Bamford (2024) methods (see below).

The suitability of the survey area for breeding (additional to the specific tree survey) and as foraging was also assessed and mapped (see 'foraging habitat survey methods' below).

Tree Survey Methods

Potential and actual Black Cockatoo habitat trees are:

- tree species as listed in the Commonwealth guidance (DAWE 2022a)
- a minimum size of 500 mm diameter at breast height (DBH) for most species, or 300 mm DBH for Salmon Gum and Wandoo although neither are anticipated from the survey area.

The following are recorded for each potential and actual habitat tree:

- location, recorded using a handheld GPS device with an accuracy of approximately 5 m
- species
- identifying if tree hollows of suitable size and orientation are present, and recording evidence of use by cockatoos such as chewing at the hollow entrance
- habitat value according to the scoring system developed by Dr Mike Bamford (2024); this score reflects the existing value of the tree characteristics with respect to its potential to be used as a nesting tree (**Table 21** in **Appendix Two**)
- photographs of each Class 3 (Bamford) and above trees, showing hollows if possible
- known nesting trees as per DBCA data.

Foraging Habitat Survey Methods

The suitability of the survey area for breeding (additional to the specific tree survey) and as foraging habitat was assessed and mapped as per the Commonwealth (DAWE 2022a) scoring tool and Bamford (2020) foraging habitat methods.

The Commonwealth (DAWE 2022a) scoring tool (**Table 22** in **Appendix Two**) takes into consideration:

- the extent of the site (that must be at least 1 ha to be considered as suitable)
- preferred foraging species
- connectivity to other foraging habitat within 12 km
- proximity to known foraging and breeding habitat within 12 km
- presence of disease, such as *Phytophthora cinnamomi* or Marri Canker (*Quambalaria coyrecup*).

The Bamford (2020) scoring system (**Table 23** in **Appendix Two**) takes into consideration:

- site condition (vegetation composition, condition and structure)
- site context (the site in relation to other native vegetation within a 15 km radius of the site)

- species density (stocking rate: frequency and abundance of Black Cockatoos at the site)
- modification, if needed, for vegetation with little or no foraging value and for pine plantations that provide valuable food sources.

4 FIELD SURVEY RESULTS

4.1 FLORA AND VEGETATION SURVEY

The flora and vegetation survey was conducted by Kyla Pannell (Senior Botanist, Flora Collecting Permit FB62000261-2; Threatened Flora Collecting Permit TFL 161-2122) during 17-19 September 2024.

4.1.1 FLORA INVENTORY

Twelve floristic quadrats were recorded from within the survey area (shown on **Map 4**).

208 vascular flora taxa were recorded from 151 genera and 58 families from the quadrats, opportunistic observations and searches for conservation-listed flora. Of these, 64 were introduced (30.77%) and nine (4.33%) could not be identified to species level due to insufficient diagnostic reproductive material.

The most commonly represented families were Fabaceae (26 taxa), Asteraceae (17) and Myrtaceae (14). The most commonly represented genera were *Acacia* with eight taxa and *Banksia* (six).

The number of species per quadrat ranged from 31 in quadrat WT2402 to 51 in quadrat WT2404, with an average species diversity per quadrat of 37.1 species (29.3 excluding weeds). The most commonly recorded species were **Ursinia anthemoides* (12 quadrats), *Allocasuarina fraseriana*, *Mesomelaena pseudostygia*, *Hibbertia hypericoides* subsp. *hypericoides*, *Briza maxima* and *Xanthorrhoea brunonis* (all recorded from 11 quadrats).

The combined flora inventory is presented in **Appendix Five**. Quadrat data is presented in **Appendix Seven**.

4.1.2 CONSERVATION-LISTED FLORA

Threatened Flora

No Commonwealth EPBC Act or Western Australian BC Act-listed TF were recorded during the field survey. No taxa that was not identified with certainty resembled any currently described TF.

Priority Flora

One Priority 2 taxon was recorded during the field survey, *Poranthera moorokatta* (one plant), from quadrat WT2408 in association with *Allocasuarina fraseriana, Banksia attenuata* and *Eucalyptus marginata* subsp. *marginata* mid woodland vegetation on a low, gently undulating grey sandy plain (shown on **Map 4**). A specimen was submitted to the Western Herbarium for formal identification (ACC/11358/E).

This species is a poorly known herb growing to 2 cm in height. According to *Florabase* (2024) there are 15 records of this species in the Swan Coastal Plain region with a distribution from Cervantes to Busselton. The majority of known records are located in the Perth metropolitan region.

4.1.3 OTHER SIGNIFICANT FLORA

No flora taxa having other significance according to the Flora and Vegetation Technical Guidance (EPA 2016a) were recorded during the field survey.

4.1.4 FLORA OF TAXONOMIC INTEREST

No flora of taxonomic interest were recorded during the field survey.

4.1.5 INTRODUCED FLORA

Sixty-four introduced flora species (weeds) were recorded in the quadrats and opportunistically during traverses through the survey area, representing 30.92% of the overall flora inventory.

Weeds were present in all quadrats and density varied, ranging from a minimum of <1% cover in quadrat WT2410 to a maximum of 30% cover in quadrat WT2402. The mean weed cover per quadrat was 10.3%.

**Ursinia anthemoides* subsp. *anthemoides*, **Briza maxima*, *Hypochaeris glabra and **Gladiolus caryophyllaceus*, were the most commonly recorded weeds and mostly recorded at low densities.

4.1.5.1 Significant Weeds

Two of the weeds recorded (**Asparagus asparagoides* and **Opuntia stricta*) are WoNS and Declared Pest plants (shown on **Map 5** and **Image 1**–**Image 2** below). **Asparagus asparagoides* (Bridal Creeper) was recorded from Degraded roadside bushland along Nicholas Road, totalling one population with three plants. **Opuntia stricta* (Common Prickly Pear) was recorded in Degraded bushland in two plots, totalling two populations with four plants.

Image 1:*Asparagus asparagoides* (Bridal Creeper)

Image 2: *Opuntia stricta* (Common Prickly Pear)

4.1.6 VEGETATION

4.1.6.1 Vegetation Types

Two vegetation types were recorded from within the survey area (shown in **Table 6** below and on **Map 4**) based on a combination of structural vegetation type as identified in the field, floristic analysis (see **Section 4.1.8**) and subsequent desktop review.

Table 6: Vegetation types

Mapping unit	Vegetation type	Floristic quadrats	Representative photograph
BaLOF	**Vegetation description:** *Banksia attenuata*, *Allocasuarina fraseriana* and *Banksia menziesii* low open forest over *Eremaea pauciflora* var. pauciflora, *Xanthorrhoea brunonis* and *Daviesia divaricata* subsp. *divaricata* mid open shrubland over *Mesomelaena pseudostygia* and *Hibbertia hypericoides* subsp. *hypericoides* low open sedgeland/shrubland on a low, gently undulating grey or pale yellow sandy plain **Characteristic species:** *Adenanthos cygnorum, Alexgeorgea nitens, Banksia prionotes, *Briza maxima, Calytrix fraseri, *Ehrharta longiflora, *Ehrharta calycina, Eucalyptus marginata* subsp. *marginata, *Hypochaeris glabra, Jacksonia stembergiana, Morelotia octandra, Patersonia occidentalis, Stirlingia latifolia *Ursinia anthemoides* subsp. *anthemoides, Xanthorrhoea preissii* **Extent:** 19.94 ha, 14.78%	**WT2401** WT2402 WT2403 WT2405 WT2407 WT2408 WT2409 WT2410	
EmmLW	**Vegetation description:** *Eucalyptus marginata* subsp. *marginata*, *Banksia prionotes* and *Allocasuarina fraseriana* low woodland over *Xanthorrhoea brunonis* and *Daviesia nudiflora* subsp. *nudiflora* mid sparse shrubland over *Hibbertia hypericoides* subsp. *hypericoides* and *Mesomelaena pseudostygia* low sparse shrubland/sedgeland on a low, gently undulating grey or pale yellow sandy plain **Characteristic species:** *Banksia attenuata, Banksia menziesii, *Briza maxima, Calytrix fraseri, *Ehrharta calycina, *Gaudium laevigatum, Patersonia occidentalis, Scaevola repens* var. *repens, *Ursinia anthemoides* subsp. *anthemoides, Verticordia densiflora* **Extent**: 12.97 ha, 9.61%	WT2404 WT2406 **WT2411** WT2412	
	Not native vegetation (cleared)		101.95 ha 75.60%
	TOTAL EXTENT		134.86 ha 100%

4.1.7 VEGETATION SIGNIFICANCE

4.1.7.1 TECs and PECs

The DBCA database search and previous survey by PGV Environmental (**Section 2.2.4**) identified the Banksia Woodlands TEC as occurring within the survey area. Both vegetation types mapped in the survey area are considered to represent this TEC based on the key diagnostic characteristics (described in **Appendix Three**), summarised in **Table 7** below:

Table 7: *Banksia* Woodlands TEC Assessment (TSSC 2016)

Category	Key characteristics	Assessment
Location and physical environment	The *Banksia* Woodlands ecological community primarily occurs in the Swan Coastal Plain IBRA bioregion.	Both vegetation types occur in the Swan Coastal Plain IBRA bioregion.
Soils and landform	The *Banksia* Woodlands ecological community typically occurs on well drained, low nutrient soils on sandplain landforms.	Both vegetation types occur on a low undulating sandy plain with leached grey or pale yellow soil.
Structure and composition	Low woodland to forest with an upper layer dominated or co-dominated by: • *Banksia attenuata* • *Banksia menziesii* • *Banksia prionotes* • *Banksia ilicifolia.*	Vegetation type **BaLOF** was co-dominated by *Banksia attenuata* and *B. menziesii* in the upper stratum. Vegetation type **EmmLW** was co-dominated by *Banksia prionotes* in the upper stratum.
	May also include an emergent tree layer with *Corymbia calophylla, Eucalyptus marginata* or less commonly *E. gomphocephala.*	Vegetation type **EmmLW** was characterised by emergent *Eucalyptus marginata* subsp. *marginata.*
	Other trees of a medium height may be present and may be codominant with the *Banksia* species, including: • *Eucalyptus todtiana* • *Nuytsia floribunda* • *Allocasuarina fraseriana* • *Callitris arenaria* • *Callitris pyramidalis* • *Xylomelum occidentale.*	*Allocasuarina fraseriana* was co-dominant with *Banksia* species in both vegetation types.
	The understorey typically contains a high to very high diversity of shrubs and herbs.	The overall floristic composition was moderate in diversity with an average of 37 understory species per quadrat (29 excluding weeds), including shrubs and herbs. Additional species (particularly ephemerals and herbs) are considered likely to occur during more favourable seasonal conditions (see **Section 0** on botanical limitations).
Vegetation condition	A patch should meet at least the Good Condition category and meet the following minimum patch sizes: • Pristine: no minimum patch size applies • Excellent: 0.5 ha or 5,000 m^2 • Very Good: 1 ha or 10,000 m^2 • Good: 2 ha or 20,000 m^2.	Three patches have vegetation in Good or better condition with total extents (6.99 ha, 8.77 ha and 2.21 ha) exceeding the minimum size criteria of 2 ha or more. Other areas in Good or Very Good condition did not meet the relevant minimum size thresholds.

Based on the above assessment, the total extent of the TEC within the survey area was mapped as occupying 17.97 ha or 13.32% (shown on **Map 4**).

4.1.7.2 Other Significant Vegetation

The *Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community* (Critically Endangered under the EPBC Act) was identified as 'likely' from the PMST search. While Tuart was recorded opportunistically within the survey area, trees were rarely encountered and did not meet the key diagnostic criteria for the ecological community as listed in the Conservation Advice (shown in

Appendix Three) (DotEE 2019), namely that the gaps between mature, living trees exceeded the minimum distance of 60 m.

4.1.8 FLORISTIC ANALYSIS

The floristic analysis dendrogram (**Figure 3**) indicates that the structural vegetation types, as interpreted during the field survey, are well supported by the floristic analysis except for quadrat WT2410. Quadrat WT2410 within the **BaLOF** vegetation type has been clustered with quadrats from **EmmLW**. Although the analysis has grouped WT2410 with **EmmLW** quadrats, the structural formation and composition of dominant species aligns with **BaLOF** and, therefore, the quadrat is retained within this vegetation type.

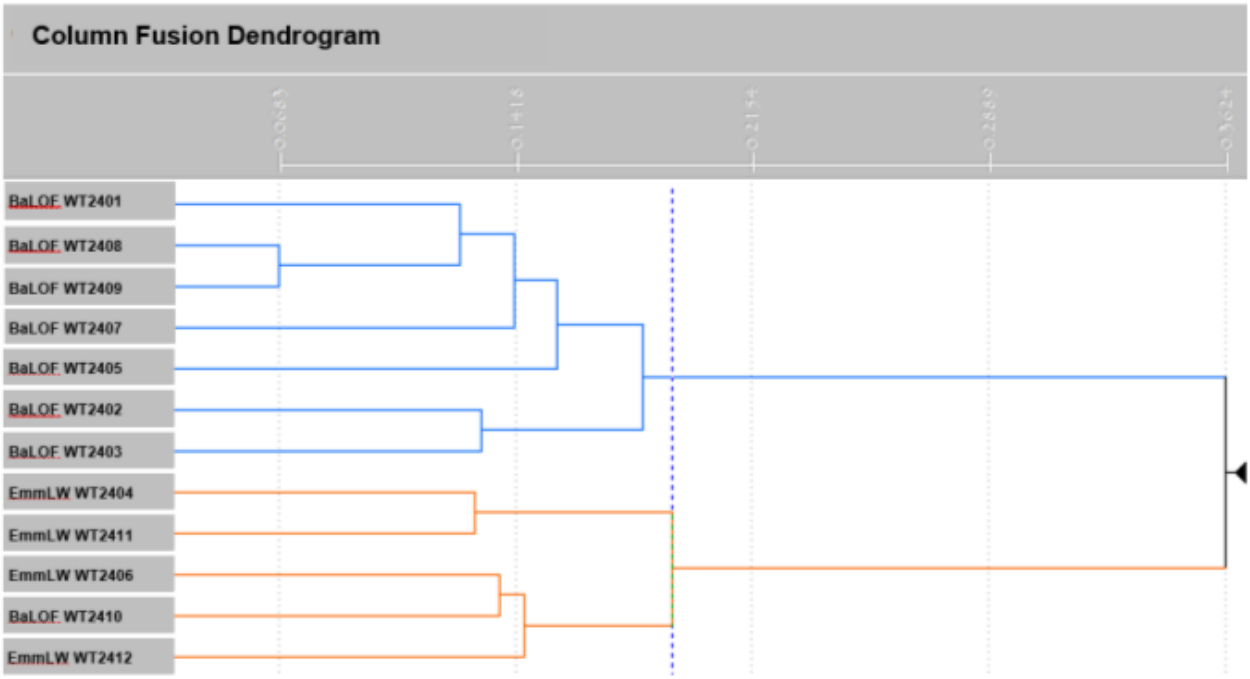

Figure 3: Floristic analysis dendrogram

4.1.8.1 Floristic Community Type Analysis

A floristic community analysis was undertaken incorporating the survey area quadrats (including PGV) into the Gibson *et al.* (1994) dataset. The floristic analysis dendrogram (segment shown in **Figure 4** below, full version shown in **Appendix Eight**) indicates that vegetation within the survey area most likely corresponds with SCP28 'Spearwood *Banksia attenuata* or *B. attenuata–Eucalyptus* woodlands'. SCP28 is included in the Banksia Woodlands TEC. Analysis was also undertaken using the Keighery *et al.* (2012) dataset, however, the SCP floristic units were not clearly clustered together in the resulting dendrogram (although the quadrats from this survey did align with SCP28). As such, this analysis is excluded from further discussion.

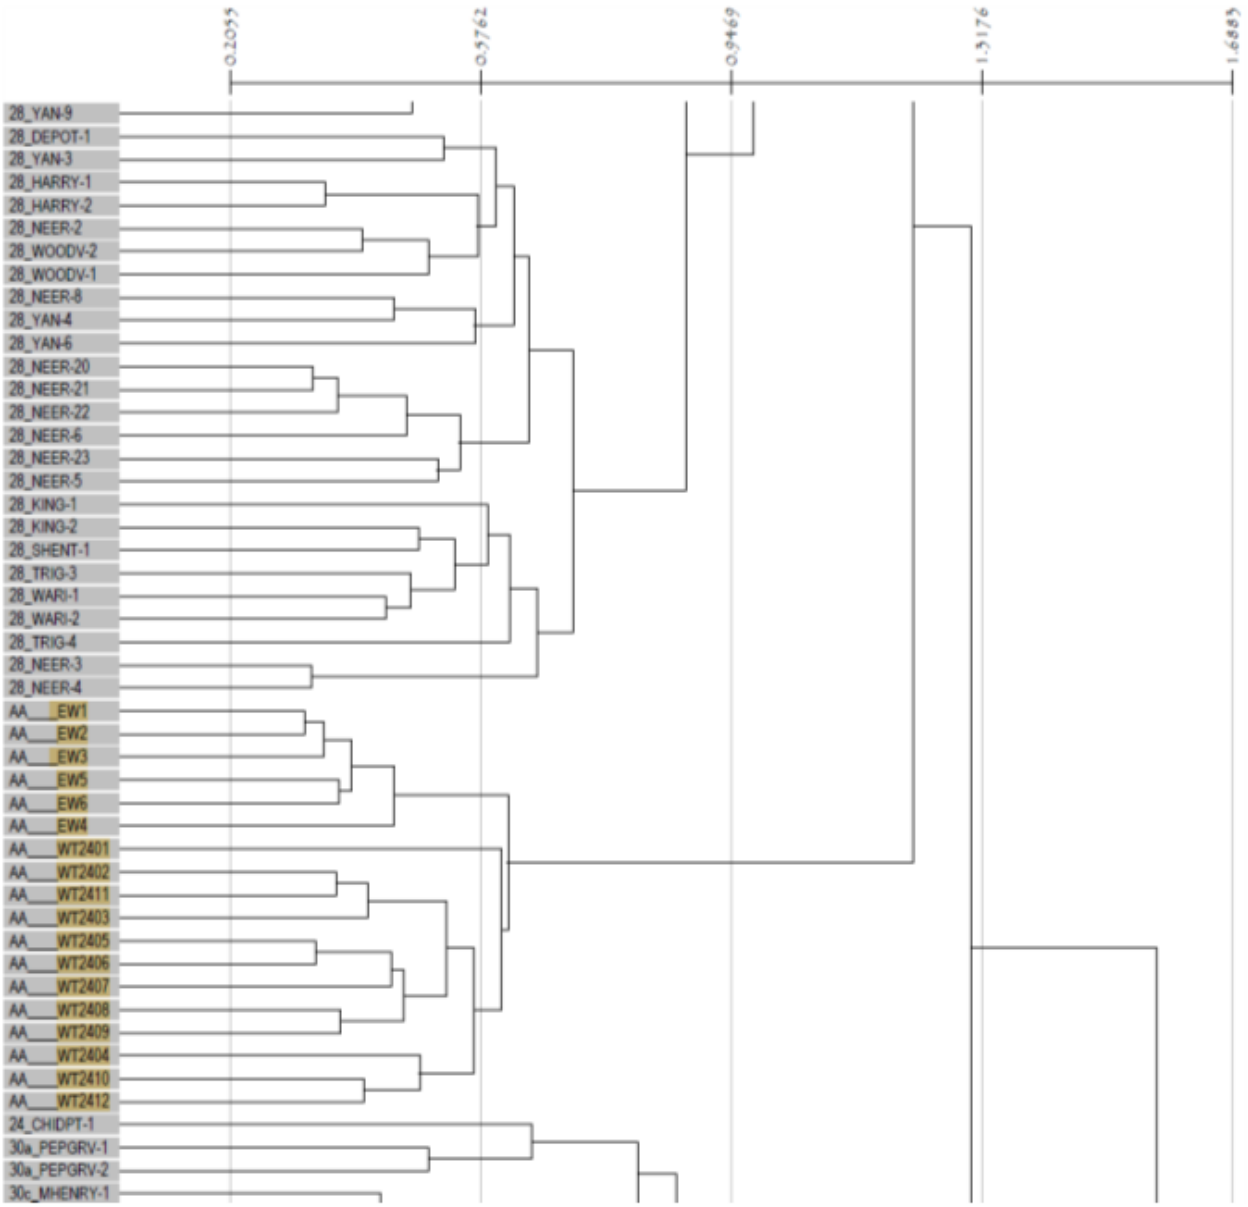

Figure 4: FCT analysis dendrogram segment

4.1.8.2 Adequacy of Survey

Adequacy of survey can be demonstrated using a species accumulation curve; if the curve has reached (or almost reached) an asymptote it is considered that most species are likely to have been recorded from the survey area.

A species accumulation curve was generated using quadrat data (**Figure 5**). Opportunistic observations which increase the number of species recorded are not included in the analysis.

The species accumulation curve suggests that an asymptote as almost been reached. The Bootstrap estimate of species richness is 146.5 which, when taking opportunistic records into account, is less than that total number of species recorded (207).

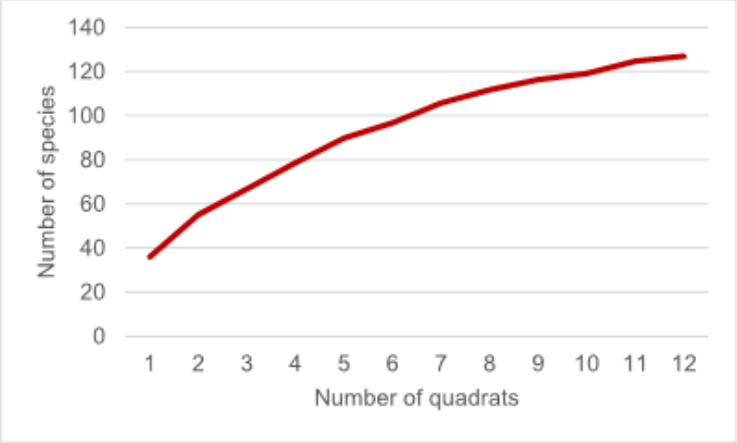

Figure 5: Species accumulation curve

4.1.9 VEGETATION CONDITION

The vegetation condition within the survey area ranged from Completely Degraded to Very Good condition, with a large proportion of vegetated areas (65.1%) mapped in Good or Very Good condition (**Table 8**). The main factors affecting vegetation condition were clearing associated with rural/rural residential land uses and the presence and abundance of weeds. Degraded and Completely Degraded areas mostly occurred adjacent to market gardens, cleared areas or rural dwellings. Areas that were completely cleared of vegetation occupied the majority of the survey area (75.6%), consisting of housing, paddocks, market gardens and roads or tracks (**Table 8**, **Map 5**).

Table 8: Vegetation condition

Vegetation condition	Extent (ha)	Proportion (%)
Pristine	-	-
Excellent	-	-
Very Good	10.98	8.14%
Good	10.43	7.73%
Degraded	9.10	6.75%
Completely Degraded	2.39	1.77%
Not vegetated	101.95	75.60%

The effects of drought on vegetation within the survey area was also observed during the field survey. Vegetation structure had been significantly impacted in some patches with the death of trees in the upper stratum (shown on **Image 3** to **Image 5** below, corresponding with waypoints 13-15 on **Map 5**). However, as drought cannot be definitely attributed to human causes it is considered as a natural phenomenon and does not significantly contribute to vegetation condition assessment. The vegetation condition scale has been developed to identify the scale of human induced change to vegetation since European settlement.

Image 3: Waypoint 13 showing dead *Allocasuarina fraseriana*

Image 4: Waypoint 14 showing dead *Allocasuarina fraseriana*

Image 5: Waypoint 15 showing dead *Banksia* sp.

4.1.10 BOTANICAL LIMITATIONS

Survey design and type: Single phase, quadrat-based flora and vegetation survey with extensive traverses searching for conservation-listed flora. Results from previous surveys were considered as part of survey design and the desktop assessment.

Type of vegetation classification system: Vegetation classified at NVIS Level V (NVIS Technical Working Group & DotEE 2017) using largely structural vegetation types defined using dominant and characteristic species and vegetation structure as recorded during the field surveys. Floristic analysis was used to identify major floristic groups and outlier groups of floristic interest.

A full summary of botanical limitations is presented in **Table 9**.

Table 9: Botanical limitations

Possible limitations	Constraints (yes/no): Significant, moderate or negligible	Comment
Availability of contextual information at a regional and local scale	No	Two previous survey reports intersecting a large portion of the survey area were available to provide contextual information. Additional sources of information on the flora and vegetation of the Swan Coastal Plain are also publicly available to provide context.
Competence/experience of the team conducting the survey, including experience in the bioregion surveyed	No	The lead botanist conducting the field survey has over 11 years botanical experience, including five years as a botanical consultant in Western Australia, servicing all regions including the Swan Coastal Plain.
Proportion of the flora recorded and/or collected, and any identification issues	No	208 vascular flora taxa were recorded during the field survey of which six (4.33%) could not be identified with certainty to species level due to the lack of diagnostic reproductive material. However. none of the unidentified taxa are considered likely to represent any conservation-listed flora from the region.
Was the appropriate area fully surveyed (effort and extent)	No	The survey area was systematically sampled using a total of seven quadrats. All vegetation types were represented by at least three quadrats each. Lengthy traverses were also conducted throughout the survey area during searches for significant flora.
Access restrictions within the survey area	No	There were no significant access constraints within the survey area.

Possible limitations	Constraints (yes/no): Significant, moderate or negligible	Comment
Survey timing, rainfall, season of survey	Yes: moderate	The field survey was conducted during 17-19 September which is within the optimal period for primary survey in the bioregion. The rainfall in the 6 months prior to the field survey was slightly below the mean for this period (**Section 2.1.1**). The rainfall deciles in the 6 and 12 months preceding the survey (see below) show below average rainfall. This represents a moderate constraint as patches of vegetation were observed to be affected by drought indicated by the loss of upper strata species (*Banksia* and *Allocasuarina*). Prolonged below average rainfall may have also affected the presence of some annual and ephemeral species.
Disturbance that may have affected the results of the survey e.g. fire, flood, clearing	No	There were no recent disturbances that would have affected the results of the survey. None of the survey area had been recently burnt.

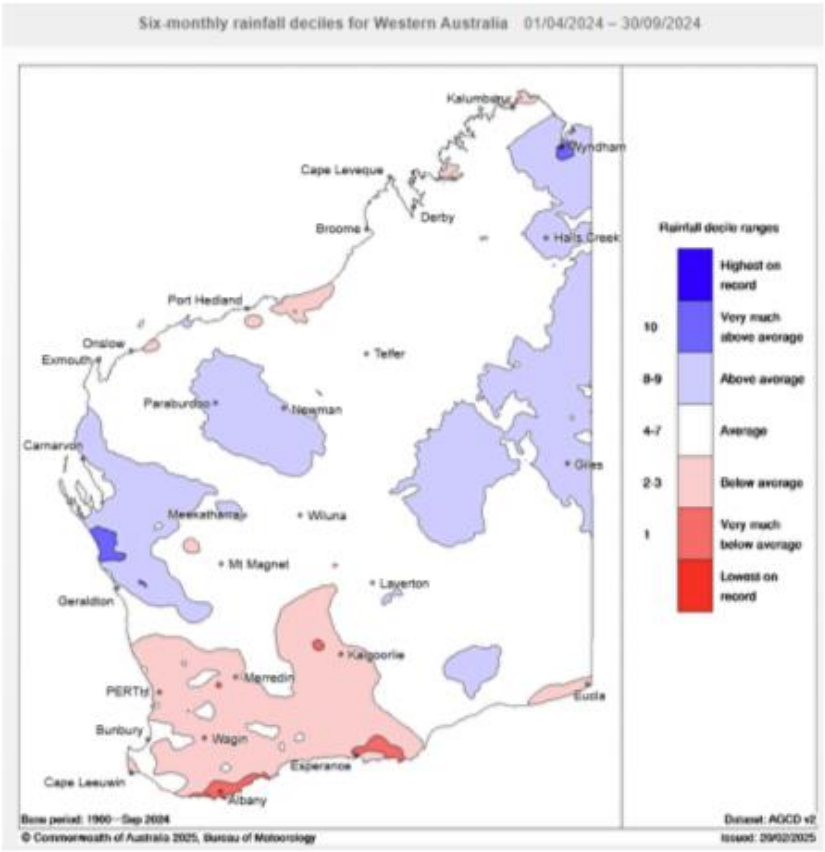

Figure 6: Rainfall deciles for the 6 months prior to the field survey (BoM 2024c)

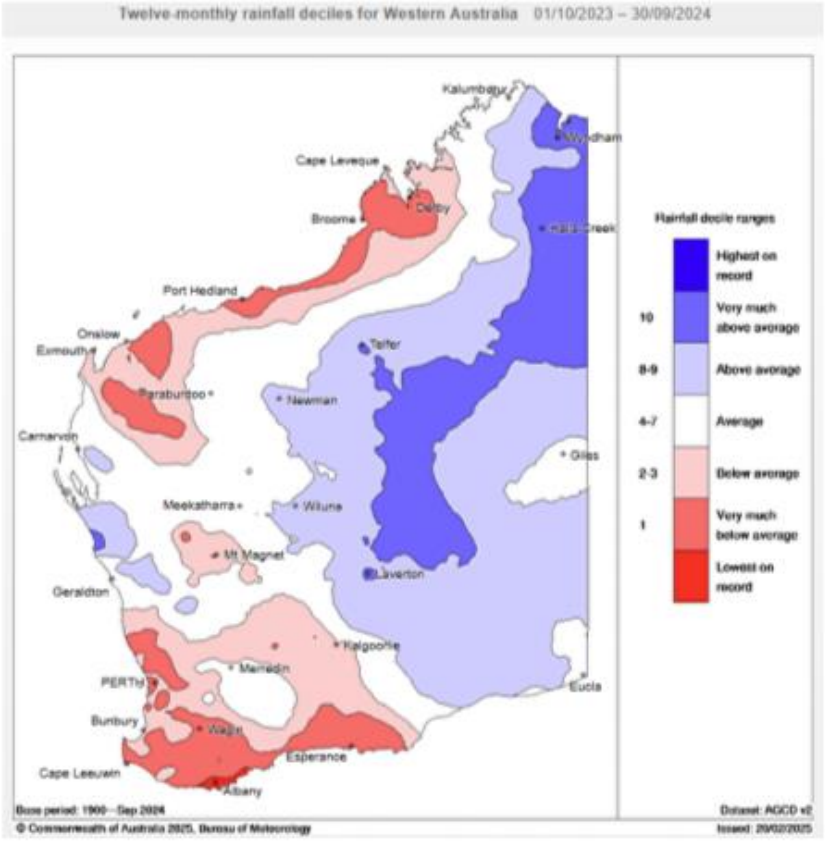

Image 6: Rainfall deciles for the 12 months prior to the field survey (BoM 2024c)

4.2 VERTEBRATE FAUNA SURVEY

The fauna survey was conducted by Tracy de Vetter (Ecologist) and Lyn Atkins (Principal Ecologist) during 3, 10 and 12 February 2025.

The survey was conducted in accordance with the requirements for a Basic survey as outlined in the Fauna Technical Guidance (EPA 2020) and included a Black Cockatoo habitat survey.

The entire site was traversed on foot and all habitats were assessed for quality and suitability for supporting both locally common and significant fauna species.

4.2.1 FAUNA HABITAT

One fauna habitat type, Banksia Woodland, was recorded within the survey area from three habitat assessment points, described in more detail below and shown in **Table 10** and on **Map 6**. The Banksia Woodland habitat type occupied 32.90 ha or 24.40% of the survey area, with the remainder cleared for rural/rural residential land uses.

Banksia Woodland

Open woodland dominated by *Banksia* species with *Allocasuarina fraseriana* (Sheoak), emergent *Eucalyptus marginata* subsp. *marginata* (Jarrah), and occasional *Eucalyptus gomphocephala* (Tuart) over mid-level shrubs with low grass trees on a grey sandy plain. This habitat provides suitable shelter and foraging resources for a common assemblage of vertebrate fauna species, reptiles and bush birds. It provides foraging resources for the conservation-listed Carnaby's and Forest Red-tailed Black Cockatoos and Quenda.

Areas of rural/rural residential land use (including market garden cultivation) were not considered as a separate habitat unit for terrestrial vertebrates. Cultivated land may support some invertebrate species and temporary food sources for some vertebrates; it may also provide temporary connectivity for small vertebrate species between remnant bushland. However, due to lack of vegetative structure to provide regular shelter and foraging resources, and frequent disturbance from human activity, these areas are not considered as habitat.

The quality of the habitat type was based on the field surveyor's experience and takes into consideration the level of disturbance to habitats from weeds, the amount of native vegetation, vegetation cover (density) and the context of the habitat with the surrounding landscape.

Table 10: Fauna habitat types

Habitat type	Description	Photograph
Banksia Woodland	**Open Banksia Woodland with *Allocasuarina fraseriana* and emergent *Eucalyptus marginata* subsp. *marginata* over shrubs and grasses on a grey sandy plain** This habitat is significant foraging habitat for Threatened Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo. It provides shelter and foraging resources for small mammals, reptiles and woodland bird species. **Extent**: 32.90 ha; 24.40%	

Habitat type	Description	Photograph
Cleared/Not native vegetation	**Not habitat** Cleared areas without (or minimal) native vegetation present. Includes areas of crop land/pastures which may provide temporary food or shelter resources and periodic connectivity between areas of native habitat, particularly for Quenda. **Extent**: 101.95 ha; 75.60%	

4.2.2 FAUNA ASSEMBLAGE

Thirty-three vertebrate fauna species were recorded during the survey (**Table 29** in **Appendix Five**) from two ornithological surveys and opportunistic observations, consisting of:

- five mammals (two introduced)
- 29 birds (four introduced)
- two reptiles.

Of these, three are conservation-listed:

- *Zanda latirostris* (Carnaby's Cockatoo; EPBC- and BC Act – Endangered); two records of two individuals perching in vegetation and an estimated 20 in flight near the survey area
- *Calyptorhynchus banksii* subsp. *naso* (Forest Red-tailed Black Cockatoo; EPBC- and BC Act – Vulnerable); one record of two individuals in flight above the survey area. Additionally, two individuals were observed foraging on *Allocasuarina fraseriana* adjacent to the survey area.
- *Isoodon fusciventer* (Quenda; DBCA P4); identified from secondary evidence; four records of diggings and grass tunnelling.

Ornithological survey sites and locations of conservation-listed fauna, including evidence of presence including foraging observations, are shown on **Map 6**. Survey sites (habitat assessment points, ornithological surveys and opportunistic records) are listed in **Table 30** in **Appendix Five**.

4.2.3 SIGNIFICANT FAUNA AND ASSOCIATED HABITAT

The significant fauna species observed during the field survey are discussed below with respect to each species' habitat requirements, taking into consideration the findings of the field survey and survey effort.

4.2.3.1 Black Cockatoo Habitat Assessment

The survey area is within the mapped distribution of Carnaby's Cockatoo and Forest Red-tailed Black Cockatoo (DAWE 2022a). Both species were recorded during the field survey.

Breeding Habitat

Black Cockatoo habitat trees were assessed according to the criteria outlined in Commonwealth guidelines (DAWE 2022a), with additional information recorded using the Bamford (2024) grading classifications to identify the potential suitability of trees to be used for nesting based on the presence, size and orientation of hollows (**Table 21** in **Appendix Two**) and further notes ranking the significance of Class 3 and above trees recorded (i.e. those with hollows).

Photographs of all trees are provided in **Appendix Nine** and their locations shown on **Map 7**.

A total of 95 trees of suitable diameter to be Black Cockatoo habitat trees were recorded. The majority were Jarrah (*Eucalyptus marginata*, 84; 88.42%) and six were dead. The results of the habitat assessment for

species and size classes are summarised in **Figure 7** with details of the habitat trees included in **Table 31** in **Appendix Five**.

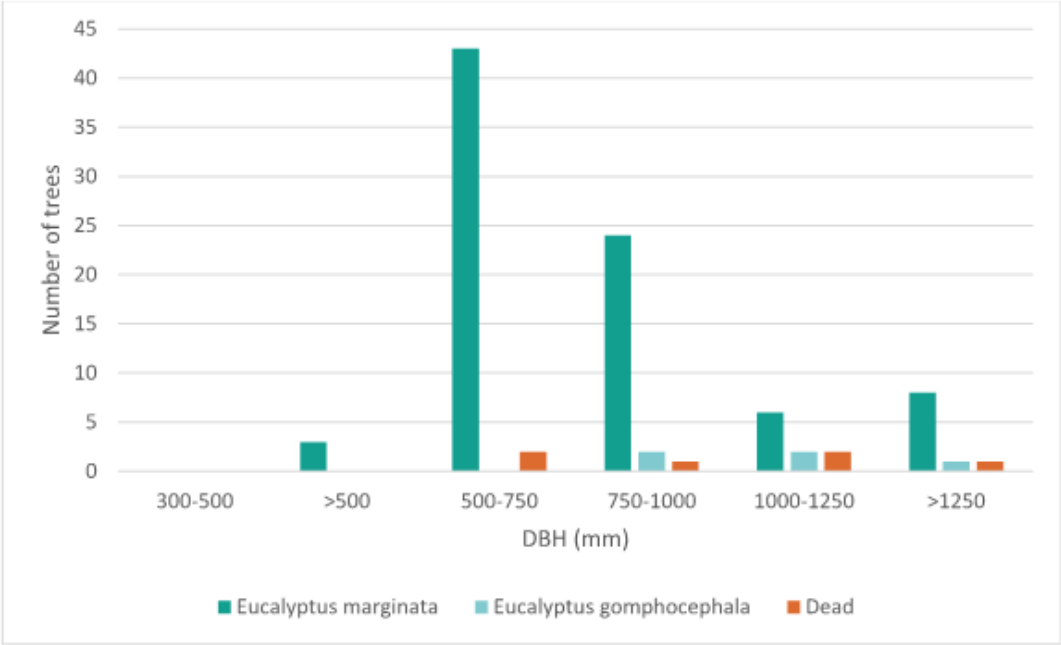

Figure 7: Black Cockatoo habitat trees (species and diameter class)

The potential for Black Cockatoo habitat trees to be used for breeding was assessed using the Bamford (2024) grading classification scale (**Table 21** in **Appendix Two**). The tree classes are summarised in **Figure 8.**

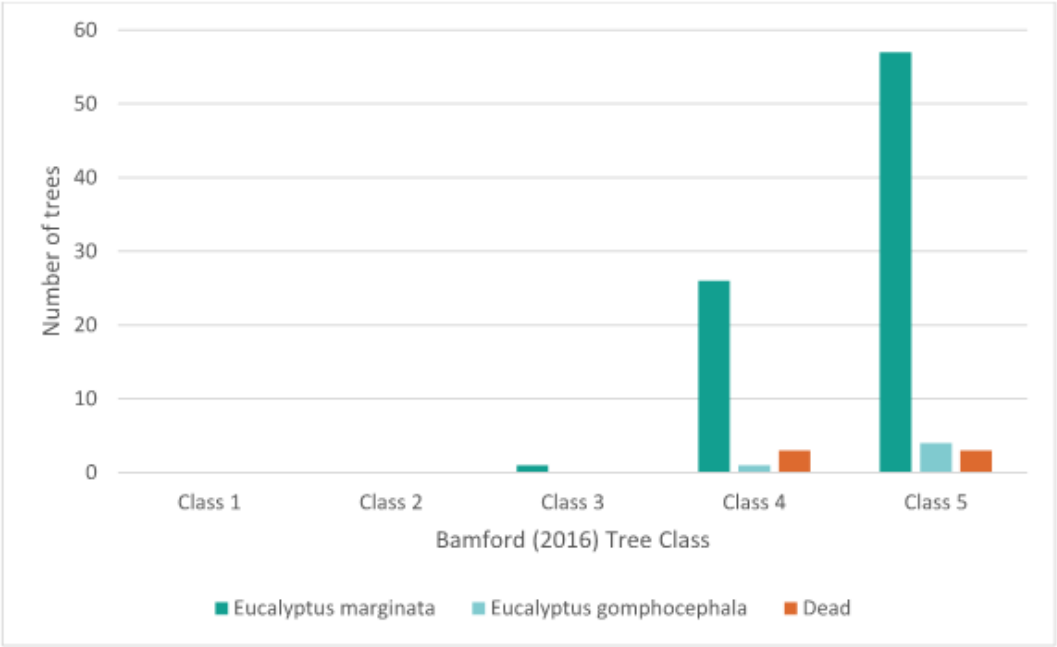

Figure 8: Black Cockatoo habitat Bamford tree classes

No trees were identified as Class 1 (trees having hollows with active nests) or Class 2 (trees having hollows showing previous use as a Black Cockatoo nest but not currently occupied). One tree was identified as Class 3 (trees having potentially suitable hollows without evidence of use), located on the eastern boundary of Lot 40.

Class 4 and 5 trees do not have hollows suitable for Black Cockatoos but are of sufficient size that they may develop them in the future. Thirty trees were classified as Class 4 (trees with large hollows that weren't suitable for Black Cockatoos) and 64 as Class 5 (trees currently without large hollows).

Three trees were visually identified as being over 500 mm diameter (of a size suitable as potential habitat trees) but could not be measured due to access limitations. All three of these trees were Class 4 or Class 5, lacking hollows suitable for Black Cockatoos.

Foraging and Roosting Habitat

No known roost locations are registered within the survey area and the closest recorded roost according to DBCA supplied data is 530 m east of the survey area (**Map 3**). The last documented use of this site was in 2022 as recorded during the Great Cocky Count (Pryor, Barrett & Williams 2023).

The Banksia Woodland habitat type within the survey area includes emergent *Eucalyptus* species, in this case mostly Jarrah with occasional Tuart. Clusters of large trees such as these have potential as roosting habitat for Black Cockatoos. One pair and one single Carnaby's Cockatoo were observed perching in the survey area (**Image 7, Map 6**), however, no evidence of roosting was observed during the survey.

Image 7: Carnaby's Cockatoos observed in the survey area

The suitability of the survey area for breeding (in addition to the specific tree survey) and as foraging habitat was assessed and mapped as per the Commonwealth scoring tool (DAWE 2022a) (**Table 22** in **Appendix Two**) and Bamford (2020) foraging habitat methods (**Table 23** in **Appendix Two**).

Foraging habitat present in the survey area includes mixed *Banksia* species (*Banksia attenuata*, *Banksia prionotes*, *Banksia menziesii*) utilised by Carnaby's, *Allocasuarina fraseriana* utilised by Forest Red-tailed Black Cockatoos and *Eucalyptus marginata* subsp. *marginata* (Jarrah) utilised by both Black Cockatoo species.

Evidence of previous foraging was identified within the survey area from chewed *Banksia* cones (**Image 8**) and by direct observation of two Forest Red-tailed Black Cockatoos foraging in *Allocasuarina* trees

(**Image 9, Map 6**). Black Cockatoo foraging species ranged from approximately 20-40% coverage throughout the survey area as estimated in field and based on detailed flora quadrat data.

Image 8: Evidence of Black Cockatoo foraging, chewed *Banksia* cones.

Image 9: Forest Red-tailed Black Cockatoo pair foraging in *Allocasuarina* sp.

Table 11: DAWE Foraging habitat scoring tool – Carnaby's Cockatoo

Habitat Summary for Carnaby's Cockatoo Foraging Habitat		Score
Starting Score:		
	10 if the site is >1 ha in extent, is within the usual range of the species, and is: • native shrubland, kwongan heathland or woodland dominated by proteaceous species • native woodland or forest containing foraging species, including roadsides, parkland cleared areas and planted native vegetation.	+10
Context adjustor (subtractions):		
	None applicable.	-0
FINAL SCORE		**10**

The final score is 10 (out of a maximum score of 10). According to the guidelines this indicates high quality foraging habitat for Carnaby's Cockatoo.

Table 12: DAWE Foraging habitat scoring too – Forest Red-tailed Black Cockatoo

Habitat Summary for Forest Red-tailed Black Cockatoo Foraging Habitat		Score
Starting Score:		
	10 if the site is >1 ha in extent, is within the usual range of the taxon, and is: • Jarrah or Marri woodland and/or forest • on the edge of Karri forest • Wandoo and Blackbutt occur on the site • includes the above if along roadsides and parkland cleared areas.	+10
Context adjustor (subtractions):		
	No known breeding areas are within 12 km of the survey area	-2
FINAL SCORE		**8**

The final score is 8 (out of a maximum score of 10). According to the guidelines this indicates high quality foraging habitat for Forest Red-tailed Black Cockatoo.

Approximately 5-10 % coverage of native bushland occurs within a 20 km radius of the survey area. The survey area is in the vicinity of one known Forest Red-tailed Black Cockatoo roost site (530 m), Carnaby's Cockatoos breeding sites (2.9 km from buffer boundary) and multiple permanent water sites (Lake Jandabup-1.1 km; Lake Badgerup-1.2 km; Lake Joondalup-2.5 km).

The Bamford (2020) scoring system (**Table 23** in **Appendix Two**) takes into consideration:

- site condition (vegetation composition, condition and structure)
- site context (the site in relation to other native vegetation within a 15 km radius of the site)
- species density (stocking rate: frequency and abundance of Black Cockatoos at the site)
- modification, if needed, for vegetation with little or no foraging value and for pine plantations that provide valuable food sources.

With the application of the Bamford (2020) foraging value tool (**Table 23** and **Appendix Two**), the survey area scores 8 of a possible total of 10 for Carnaby's Cockatoo, representing potentially high value foraging habitat, and 6 out of a possible 10 for Forest Red-tailed Black Cockatoo, representing potentially moderate value foraging habitat (**Table 13**). When considering site context values for Forest Red-tailed Black Cockatoo, (percentage of native vegetation within 15 km radius of the survey area) pine plantations were taken into account based on their value as foraging habitat

Table 13: Black Cockatoo foraging value (Bamford 2020)

Score	Carnaby's Cockatoo	Forest Red-tailed Black Cockatoo
Site condition	4: 20-40% *Banksia*	3: 5-20% foraging
Site context	3: in vicinity of known breeding area, >5% native habitat in 15 km radius	2: Breeding site unlikely, 5-10% native habitat within 15 km radius
Species density/stocking rate	1: sightings, foraging evidence	1: sightings, foraging
TOTAL SCORE	**8**	**6**

4.2.3.2 Quenda

Quenda (*Isoodon fusciventer*) are widely distributed in the southwest of Western Australia from Guilderton (north of Perth) to east of Esperance. They have a patchy distribution through the Jarrah and Karri forests, the Swan Coastal Plain and inland as far as Hyden, and have been recorded in swampy, vegetation with dense cover up to 1 m high. Quenda often feed in adjacent forest and woodland that is burnt on a regular basis and in areas of pasture and cropland lying close to dense cover. Populations inhabiting Jarrah and Wandoo forests are usually associated with watercourses. Quenda will thrive in more open habitat subject to introduced predator control (DEC 2012a).

Banksia Woodland habitat contains low shrubs, grass trees and grassy understorey which are used by Quenda for shelter and sandy soils for foraging. Evidence of this species was found in the form of diggings and

apparent tunnelling in long grass (**Image 10**: Quenda diggings). No live individuals were seen during the survey and one record of a deceased individual exists within the survey area. Quenda diggings appeared to range in age from moderate (a few years old) to recent, suggesting persistence in the survey area over time.

Image 10: Quenda diggings

4.2.4 INTRODUCED FAUNA

Five introduced vertebrate fauna species were identified during the survey from observations and secondary evidence:

- Rainbow Lorikeet (*Trichoglossus moluccanus*); one record, observed at BS01
- Rabbit (*Oryctolagus cuniculus*); one record of deceased remains
- Red Fox (*Vulpes vulpes*); two records of a burrow and deceased remains
- Laughing Kookaburra (*Dacelo novaeguineae*); one record, observed opportunistically
- Laughing Turtle-dove (*Spilopelia senegalensis*); two records, observed at BS01 and BS04
- Spotted Turtle-dove (*Spilopelia chinensis*) one record, observed opportunistically.

Red fox and Rainbow Lorikeet are Declared Pests and pose significant threats to native fauna and bird species (BAM Act 2007).

Rainbow lorikeets threaten native birds through resource competition, displacement and the spread of disease (Chapman 2005).

Red Fox predate on native mammals and birds and evidence of their presence were observed within the survey area (den and remains). During the field survey on 3 February 2025, temporary signs indicating fox trapping activity were displayed in the northern section of the survey area. Rabbit evidence included remains of partial body parts indicating predation, possibly by Fox.

The Laughing Kookaburra is well-established in Western Australia and poses a threat to native species through competition and predation.

Although Laughing and Spotted Turtle-doves are common in urban and semi-urban environments and may compete with other granivorous species, they are not considered a significant threat to native species.

4.2.5 FAUNA SURVEY LIMITATIONS

Limitations of the fauna survey are discussed below in **Table 14**.

Table 14: Fauna survey limitations

Possible limitations	Constraints (yes/no): Significant, moderate or negligible	Comment
Availability of data and information	No	Numerous previous surveys have been undertaken within the local area, providing sufficient context for the survey. Conservation-listed species information is also readily available.
Competency/experience of the survey team, including bioregion experience	No	Field Ecologists were experienced with survey methods, fauna identification and habitats assessment. The survey was overseen by a Principal Ecologist with extensive experience (>20 years) in the Swan Coastal Plain bioregion.
Scope of survey e.g. excluded fauna groups	No	The survey was undertaken as a Basic fauna survey and Black Cockatoo habitat assessment. Sufficient time was allocated to the survey to identify habitat, perform targeted searches, assess Black Cockatoo foraging, roosting and breeding habitat and adequately describe the fauna assemblage present.
Timing, weather, season	Yes: negligible	The survey was completed within the optimal period for Carnaby's Cockatoo foraging and night roost survey in the Swan Coastal Plain region (January to July), though not within the breeding period (July to December). Forest Red-tailed Black Cockatoo foraging, roost and breeding surveys may occur year-round (DAWE 2022b). Surveys were conducted on cooler days, however, warm temperatures may have lowered the likelihood of identifying some fauna species due to changes in activity.
Disturbances that may have affected results	No	There were no recent disturbances that would have affected the results of the survey. None of the survey area had been recently burnt.
Proportion of fauna identified, recorded, or collected	No	The survey effort is considered adequate for the survey level and to detect the presence of conservation-listed fauna or their suitable habitat within the survey area. The species recorded are comparable to other surveys undertaken in the area.
Adequacy of survey intensity and proportion of survey achieved	No	All accessible areas were traversed on foot and adequate time given to habitat assessment, avian surveys and targeted searches.
Access	Yes - negligible	Small portions of the native vegetation were inaccessible due to fencing or lack of permission. Native vegetation was adequately surveyed from surrounding areas in most cases, and inaccessible lots were identified as non-native or cleared via aerial imagery and as seen from accessible vantage points. Inaccessible potential habitat trees were visually identified as being over 500 mm diameter with confidence.
Data and analysis issues including sampling biases	NA	No quantitative analyses were required.

5 DISCUSSION

5.1 FLORA SIGNIFICANCE

A total of 207 vascular flora species were recorded from seven floristic quadrats and opportunistic observations, including during searches for conservation-listed flora. Sixty-four were introduced species (30.9% of the total flora inventory) reflecting the level of disturbance in the survey area.

5.1.1 FLORA SIGNIFICANCE

5.1.1.1 Conservation-listed Flora

One Priority 2 taxon was recorded during the field survey, *Poranthera moorokatta*. One plant was recorded from quadrat WT2406 in association with *Allocasuarina fraseriana, Banksia attenuata* and *Eucalyptus marginata* subsp. *marginata* mid woodland vegetation. A specimen was submitted to the Western Australian Herbarium and formally identified as *P. moorokatta* (ACC/11358/E).

Poranthera moorokatta was identified as a new species in 2012 from *Banksia* woodland in Kings Park (Barrett 2012). There are currently 15 records of this species in the Swan Coastal Plain, mostly located within the Perth metropolitan region (WAH 2024). *Poranthera moorokatta* is described as a monoecious, erect annual herb growing to 16–47 mm tall with pale-pink flowers from late September to early November (Barrett 2012). Suitable habitat includes *Eucalyptus–Banksia* or *Banksia* woodland on sandy soils and *Melaleuca–Banksia* woodland on sandy-clay soils in damplands (WAH 2024). Due to the small size of the plant and similarity to other *Poranthera* species, *P. moorokatta* can be easily overlooked and it is possible that additional plants may occur within the survey area. The difficulties identifying this species in the field have been noted in *Nuytsia* (Barrett 2012).

Based on current understanding of its population distribution, potential impacts to this species from clearing associated with the project are likely to be significant at a local scale. The nearest records to the survey area are located 7.4 km northwest in Banksia Grove (recorded in 2012) and 9.3 km southeast in Whiteman Park (recorded in 2018). No records are known from vegetation adjacent or nearby to the survey area.

At a regional scale, impacts are not likely to be significant. *Poranthera moorokatta* has an approximate range of 340 km north–south within the Swan Coastal Plain region. Several records also occur within nature reserves and other conservation lands, including Whiteman Park, Shirley Balla Swamp Reserve and Kings Park. However, it does not appear to be abundant where it grows and its preferred habitat has a high degree of historical impact from clearing for urban development, forestry and agriculture. Clearing remains an ongoing threat to this species and as well as weed invasion, altered fire regimes and changes in vegetation cover density (Barrett 2012).

According to the DBCA, Priority 2 taxa are poorly known species with records from few locations, some of which are in nature reserves. P2 species may also include those that are well known from several locations but do not meet adequacy of survey requirements and may be under threat (DBCA 2020).

5.1.1.2 Post-survey Likelihood Assessment

The likelihood of conservation significant flora occurring in the survey area was revised following the field survey. This revised likelihood, that took into account vegetation condition and disturbances, actual habitat availability and search effort, is included in **Table 26** in **Appendix Four**.

Four conservation-listed flora taxa had previously been recorded within close proximity (<2.5 km) of the survey area, namely *Acacia benthamii* (P2), *Drosera* x *badgerupii* (P2), *Cyathochaeta teretifolia* (P3) and *Jacksonia sericea* (P4). *Acacia benthamii* and *Jacksonia sericea* were considered 'Likely' to occur during the desktop likelihood assessment based on the potential for suitable habitat to occur within the survey area. These taxa were targeted for survey, discussed in more detail below.

***Acacia benthamii* (P2)**

This a poorly known species described as a shrub growing to 1 m tall with yellow globular flowers and pungent short, linear phyllodes. It grows in grey or yellow-brown sandy soils over limestone or on limestone breakaways in association with *Banksia*, *Allocasuarina* and *Eucalyptus* woodland (WAH 2024). According to *Atlas of Living Australia* (ALA) (2024), this species is restricted to the Swan Coastal Plain region, with 39 records located between Cataby and Mandurah. The nearest record to the survey area is located 0.8 km to the west in Amery Park, however, it is a historical record (from 1901) and likely no longer valid due to land use change and likely locational inaccuracy.

The field survey identified the habitat of the survey area as *Eucalyptus*, *Banksia* and *Allocasuarina* low woodland and *Banksia*, *Allocasuarina* low open forest over mixed shrubland and sedgeland on a low undulating grey or pale yellow sandy plain over limestone. Suitable habitat for *A. benthamii* is considered to occur within the survey area, however, the species is not likely present. Extensive traverses were conducted throughout the survey area and no plants were found. Previous assessment by PGV Environmental also did not record any *A. benthamii* (2023). Furthermore, the survey area is heavily cleared with native vegetation only occupying 24.4%, reducing the likelihood of this species occurring. As such, the post-survey likelihood of occurrence was revised to 'unlikely'.

***Jacksonia sericea* (P4)**

This species is a distinctive low spreading shrub growing to 0.6 m tall with orange flowers. It occurs on yellow or grey sandy plains/undulating plains over limestone in association with *Banksia*, *Eucalyptus* and *Allocasuarina* woodland (WAH 2024). According to ALA (2024), this species is mostly found on the Swan Coastal Plain between Yanchep and Mandurah. The nearest record to the survey area is located 1.3 km to the east in Golfview Park (recorded in 2007).

Suitable habitat is considered to occur within the survey area, however, the species is unlikely to be present given that extensive traverses were conducted throughout the survey area and no plants were found, including during previous assessment by PGV Environmental (2023). As such, the post-survey likelihood of occurrence was revised to 'unlikely'.

5.1.1.3 Other Significant Flora

No species having any other significance according to the Flora and Vegetation Technical Guidance (EPA 2016a) was recorded, nor any flora of taxonomic interest.

5.1.1.4 Introduced Flora

Sixty-four introduced species were recorded during the field survey, including two significant weeds, **Asparagus asparagoides* and **Opuntia stricta.* Both **A. asparagoides* and **O. stricta* are WoNS and Declared Pest plants and were recorded at relatively low densities within the survey area. There are no management requirements under the *Biosecurity and Agriculture Management Act 2007* for **A. asparagoides*, however, **O. stricta* is in the C3 (management) category requiring some form of management to alleviate the impact of the organism or prevent or contain its spread.

Most weeds recorded are common in bushland and naturalised in the Swan Coastal Plain region. Weeds were frequently encountered throughout the survey area, although at variable densities, and were present in all quadrats. The survey area is situated within a rural zone adjacent to residential and rural residential areas with housing, paddocks, market gardens and roads or tracks occupying 75.6% of the total area. This represents a high level of disturbance which favours weed invasion into native vegetation. Typically, the edges of vegetation bordering cleared or disturbed areas were more impacted by weeds with condition improving further into bushland.

5.2 VEGETATION SIGNIFICANCE

Two vegetation types were recorded from the survey area:

- **BaLOF**: *Banksia attenuata, Allocasuarina fraseriana* and *Banksia menziesii* low open forest, occupying 19.9 ha (14.8%)
- **EmmLW**: *Eucalyptus marginata* subsp. *marginata, Banksia prionotes* and *Allocasuarina fraseriana* low woodland, occupying 12.9 ha (9.6%).

Vegetation type **BaLOF** primarily occupied the southern half of the survey area and consisted of *Banksia* forest over a diverse understorey of shrubs, herbs, grasses and sedges on a low undulating grey or pale yellow sandy plain. The FCT analysis identified this vegetation type as mostly likely to be SCP28 'Spearwood *B. attenuata* or *B. attenuata* – *Eucalyptus* woodlands'. A large proportion of **BaLOF** exhibited low disturbance and was mapped in Good or Very Good condition. Areas in poorer condition were typically on the edges adjacent to tracks, roads and cleared or partially cleared areas. Locally, **BaLOF** occurs outside the survey area, although highly fragmented and cleared/partially cleared from urban or rural development. Two patches that include this vegetation type were identified as significant following assessment against the Banksia woodlands TEC criteria (discussed in more detail below).

Vegetation type **EmmLW** primarily occurred in the northern half of the survey area and consisted of *Eucalyptus* – *Banksia* woodland over a diverse understorey of shrubs, herbs, grasses and sedges on a low undulating grey or pale yellow sandy plain. This vegetation type was also best aligned with SCP28 from the FCT analysis. Similarly to **BaLOF**, a large proportion of **EmmLW** had a low level of disturbance and was mapped in Good or Very Good condition. Locally, this vegetation types occurs outside the survey area, although highly fragmented and cleared/partially cleared. Two patches that include this vegetation type were identified as significant following assessment against the Banksia Woodlands TEC criteria (discussed in more detail below).

5.2.1 TEC ASSESSMENT

The Banksia woodlands TEC was known to occur in the survey area from the DBCA database search results and from the results of a previous survey that intersected a large portion of the survey area (PGV Environmental 2023). The TEC is described as *Banksia*-dominated woodland over a species-rich understorey and with high endemism and localised variation in species composition across its range. The TEC is largely restricted to the Swan Coastal Plain which is recognised as a global biodiversity hotspot (TSSC 2016).

Patches within both vegetation types are considered to represent the TEC based on floristic composition, structural formation, landform association and vegetation condition as per the criteria outlined in the Approved Conservation Advice (TSSC 2016). The total area mapped as TEC within the survey area is 17.97 ha or 13.32%, distributed over three discrete patches where the patches met the condition and extent thresholds, and were separated by a discontinuity in ecological function of more than 30 m, as outlined in the Approved Conservation Advice. While average floristic diversity was considered moderate (and not high or very high which typically characterises the TEC), high disturbance pressures (particularly from surrounding land uses) combined with decreasing annual rainfall for the region are likely impacting diversity of the native vegetation and, therefore, the floristic diversity of the patches is considered adequate to meet the criteria of the TEC.

5.2.1.1 Local and Regional Vegetation Significance

The current extent of the Banksia Woodlands TEC is not known, however, it was estimated at the time of its listing under the EPBC Act in 2016 that 81,800 ha (24%) of the ecological community remains within its range (TSSC 2016). Key threats to the ecological community include clearing and fragmentation, degradation from public access, Dieback disease, invasive species, altered fire regimes, hydrological disturbance, climate change, grazing, decline in pollinating and seed dispersal fauna and loss of keystone *Banksia* species (TSSC 2016).

The *Banksia* Woodland ecological community has a high degree of historical impact from threatening processes with clearing and fragmentation (primarily from urbanisation, mining and agriculture/horticulture) considered the most significant threats to the ecological community, as was observed within East Wanneroo.

As such, patches mapped as the TEC within the survey area (including adjacent patches that do not meet the minimum condition threshold but retain biodiversity value (TSSC 2016)) are considered to provide an important function in the maintenance of the community's ecological integrity, as per the criteria outlined in the Flora and Vegetation Technical Guidance (2016a).

5.2.2 VEGETATION CONDITION

Native vegetation occupied 75.6% of the survey area with the remaining area cleared for rural residential properties and market garden horticulture. The vegetation condition ranged from Completely Degraded to Very Good condition, with a large proportion of vegetated areas (65.1%) mapped in Good to Very Good condition.

All vegetation within the survey area was bordered entirely or partially by cleared areas and condition was typically downgraded on the edges of patches due to higher weed presence and/or loss of vegetation structure and composition. Vegetation condition typically improved further into the patch and where patches were large relative to the surrounding cleared area. In addition to clearing and weeds, drought is also likely to have affected condition in some areas with patches of dead trees observed, including *Eucalyptus*, *Banksia* and *Allocasuarina*. Impacts from drought appeared mostly restricted to the upper stratum.

5.3 FAUNA SIGNIFICANCE

5.3.1 FAUNA HABITAT TYPES

One fauna habitat type was recorded during the field survey, Banksia Woodland, described as Open Banksia Woodland with *Allocasuarina fraseriana* and emergent *Eucalyptus marginata* subsp. *marginata* over shrubs and grasses on a grey sandy plain (**Section 4.2.1**):

The Banksia Woodland habitat type occupies 24.40% of the survey area with the remaining habitat cleared for rural residential land uses. This habitat type consists of high-quality foraging habitat for Carnaby's Cockatoo and moderate-quality foraging habitat for Forest Red-tailed Black Cockatoos according to the Bamford foraging scale which incorporates site condition, site context and species density into its score. Based on the Commonwealth foraging quality score tool, the habitat type has high quality foraging value for both species, with the presence of key foraging plants, including *Banksia* and *Allocasuarina* spp. The presence of two Forest Red-tailed Black Cockatoos feeding on *Allocasuarina* within the survey area confirms the importance of this area as foraging habitat for this species.

The survey area includes one Class 3 tree with potentially suitable hollow but with no signs of use, in addition to Class 4 and Class 5 trees that may develop suitable breeding hollows in the future. Within the Banksia Woodland habitat type, clusters of emergent *Eucalyptus* spp. have potential for use as roosting habitat by Black Cockatoos (although no evidence of roosting was observed). Furthermore, as the landscape is largely fragmented, the Banksia Woodland habitat is also likely being utilised by Black Cockatoos that roost and breed nearby, providing important connectivity between roosting and breeding sites (DAWE 2022b).

Banksia woodland, previously extensive throughout the Swan Coastal plain, has been in decline since European settlement due to clearing for land use change. A portion of the Banksia Woodland habitat type within the survey area corresponds with the Threatened Banksia Woodlands TEC (**Section 4.1.7**). This community is described as being dominated by *Banksia* spp., occasionally with emergent trees of *Corymbia calophylla*, *Eucalyptus marginata* or, less commonly, *E. gomphocephala*, and a diverse understory of shrubs and herbs (TSSC 2016). This remnant high quality Banksia woodland provides important habitat for mammals, reptiles and birds (including conservation-listed Black Cockatoos and Quenda) within a landscape that has been largely cleared (TSSC 2016, DAWE 2022b).

5.3.2 FAUNA ASSEMBLAGE

Thirty-six vertebrate fauna species were recorded during the field survey (**Section 4.2.2**).

Fauna were observed opportunistically whilst traversing the survey area, during ornithological surveys and from secondary evidence such as burrows, tracks and remains. Given the scope of a Basic fauna survey, the

species recorded do not necessarily represent the full suite of species occupying the survey area, as nocturnal and fossorial species are less likely to be detected. It is considered likely that a common suite of Swan Coastal Plain reptiles and small mammals inhabit the survey area and surrounding habitat.

Most of the species detected exhibit good mobility and are not likely to rely solely on this habitat. Pressures on the fauna assemblage that inhabit the survey area include restriction of habitat and range, predation by introduced species such as fox (recorded during the survey) and domestic pets, resource competition from introduced species and mortality from motor-vehicles strikes.

Recorded Conservation-listed species

Three conservation-listed species were recorded during the survey:

- *Zanda latirostris* (Carnaby's Cockatoo; EPBC- and BC Act Endangered)
- *Calyptorhynchus banksii subsp. naso* (Forest Red-tailed Black Cockatoo; EPBC- and BC Act – Vulnerable)
- *Isoodon fusciventer* (Quenda; DBCA P4).

Carnaby's Cockatoo

Carnaby's Cockatoo's were observed in flight close to the survey area (approximately 20 individuals) and utilising habitat in the survey area (two individuals observed perching on a dead tree branch, as well as foraging evidence). One tree potentially suitable for breeding was located with no evidence of use, however, the survey area is approximately 2.8 km from the buffer boundary of known breeding locations and is likely a regularly utilised foraging resource that is within the 12 km foraging radius from breeding sites (DAWE 2022b)

Forest Red-tailed Black Cockatoo

Forest Red-tailed Black Cockatoos were observed overflying the site and foraging on *Allocasuarina* trees. It is likely that they are also foraging on *Eucalyptus marginata* (Jarrah) within the survey area. Several lakes and wetlands (e.g. Lake Joondalup, Badgerup Lake and Jandabup Lake) also occur in close proximity to the survey area which provide an important water source for Black Cockatoos.

No known breeding locations of Forest red-tailed Black Cockatoos occur within 20 km of the survey area, however, a night roost site documented during The Great Cocky Count (last recorded in 2022) occurs approximately 530 m east of the survey area (**Map 3**). Given that this species was observed foraging, the close proximity of a recorded night roost location and the vicinity of multiple water sources (lakes and wetlands), it is considered highly likely that Banksia Woodland habitat within the survey area is being utilised regularly for foraging by this species.

Quenda

Quenda were recorded in the survey area from secondary evidence including diggings and tunnelling in grassed areas. No live animals were recorded during the survey which may be indicative of population decline from fox predation (fox trapping works were advertised in the north end of the survey area). Quenda are also most active at night and in cooler day time temperatures during winter (DBCA 2017). With reduced predator pressures (post-trapping), the habitat within the survey area and surrounds is suitable to support populations of Quenda in the future

5.3.2.1 Post-survey Likelihood Assessment

The post-survey likelihood assessment is incorporated into **Table 27** in **Appendix Four**.

Conservation-listed fauna species identified during the desktop assessment as 'likely to occur' or 'may occur' that were not recorded during the field survey are discussed below with respect to each species' habitat requirements, taking into consideration the findings of the field survey and survey effort.

***Neelaps calonotos* (Black-striped Snake; DBCA P 3)**

This species was assessed as 'may occur' during the desktop assessment. It has a restricted distribution in the sandy coastal strip from Mandurah to Cataby in Western Australia. Its preferred habitat is sandy plains

with heath vegetation or *Banksia*/*Eucalyptus* woodland and it feeds largely on the burrowing skink species *Lerista praepedita* (Blunt tailed West Coast Slider). This species has been significantly impacted by habitat loss from urban development within in its restricted distribution (Wilson & Swan 2017).

The habitat type mapped within the survey area is suitable to support this species and its prey, however, it is adjacent to urban development that reduces the likelihood of occurrence. Survey methods suited to locating burrowing species would be required to determine its presence in the survey area.

Post-survey, it's likelihood of occurring remains as 'may occur' given the suitability of the habitat.

***Falco peregrinus* (Peregrine Falcon; Other Specially Protected)**

The Peregrine Falcon was assessed as 'may occur' during the desktop assessment. It is a solitary species inhabiting cliffs, escarpments and wetlands (Debus 2012). Previous records occurring approximately 2 km east of the survey area, associated with Lake Joondalup approximately 3 km to the west. It is expected that this highly mobile species may occur periodically, flying over or hunting within the survey area, as part of an extended hunting range.

Post-survey, its likelihood has been assessed as 'may occur' although it would not be dependent on any resources available within the survey area.

***Notamacropus irma* (Western Brush Wallaby; DBCA P 4)**

The Western Brush Wallaby was assessed as 'may occur' during the desktop assessment. Its preferred habitat is open or forested woodland with open seasonally wet flats, low grass and scrubby thickets. This species was previously common within its range, but populations have significantly declined from fox predation (DEC 2012b). The closest recent records of Western Brush Wallaby are approximately 8 km from the survey area, however, it is considered unlikely to utilise the survey area due to the fragmented nature of the landscape and limited connectivity, as well as proximity to human disturbance.

It's post-survey likelihood of occurring is 'unlikely to occur' given the suitability of the habitat and proximity to disturbance.

APPENDIX ONE LEGISLATIVE CONTEXT, DEFINITIONS AND CRITERIA

COMMONWEALTH ENVIRONMENT PROTECTION AND BIODIVERSITY CONSERVATION ACT 1999

The EPBC Act is a legal framework to protect and manage matters of national environmental significance (MNES) including important flora, fauna, ecological communities and heritage areas listed under the Act.

Threatened taxa (flora and fauna) are protected under the EPBC Act, which lists species and ecological communities that have been assessed as meeting the criteria to be listed as Critically Endangered, Endangered, Vulnerable, Conservation Dependant, Extinct, or Extinct in the Wild, as detailed in **Table 15**.

Threatened Ecological Communities protected under the EPBC Act are categorised as Critically Endangered, Endangered or Vulnerable, also detailed in this table.

Migratory species subject to international agreements are also protected under the EPBC Act. The definition of a migratory species under the Act follows that prescribed by the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention) (DCCEEW 2023). The list of migratory species established under section 209 of the EPBC Act comprises:

- migratory species which are native to Australia and are included in the appendices to the Bonn Convention (Convention on the Conservation of Migratory Species of Wild Animals Appendices I and II);
- migratory species included in annexes established under the Japan-Australia Migratory Bird Agreement (JAMBA) and the China-Australia Migratory Bird Agreement (CAMBA)
- native, migratory species identified in a list established under, or an instrument made under, an international agreement approved by the Minister, such as the Republic of Korea-Australia Migratory Bird Agreement (ROKAMBA).

Table 15: EPBC Act categories for flora, fauna and ecological communities

Category	Threatened species	Threatened Ecological Communities
Extinct	A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.	n/a
Extinct in the wild	A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time: (a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or (b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.	n/a
Critically Endangered (CR)	A native species is eligible to be included in the *critically endangered* category at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria.	An ecological community is eligible to be included in the *critically endangered* category at a particular time if, at that time, it is facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with the prescribed criteria
Endangered (EN)	A native species is eligible to be included in the *endangered* category at a particular time if, at that time: (a) it is not critically endangered; and (b) it is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.	An ecological community is eligible to be included in the *endangered* category at a particular time if, at that time: (a) it is not critically endangered; and (b) it is facing a very high risk of extinction in the wild in the near future, as determined in accordance with the prescribed criteria.

Category	Threatened species	Threatened Ecological Communities
Vulnerable (VU)	A native species is eligible to be included in the *vulnerable* category at a particular time if, at that time: (a) it is not critically endangered or endangered; and (b) it is facing a high risk of extinction in the wild in the medium term future, as determined in accordance with the prescribed criteria.	An ecological community is eligible to be included in the *vulnerable* category at a particular time if, at that time: (a) it is not critically endangered or endangered; and (b) it is facing a high risk of extinction in the wild in the medium term future, as determined in accordance with the prescribed criteria.
Conservation Dependent	A native species is eligible to be included in the conservation dependent category at a particular time if, at that time: (a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or (b) the following subparagraphs are satisfied: (i) the species is a species of fish; (ii) the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long-term survival in nature are maximised; (iii) the plan of management is in force under a law of the Commonwealth or of a State or Territory; (iv) cessation of the plan of management would adversely affect the conservation status of the species.	n/a

WESTERN AUSTRALIAN ENVIRONMENTAL PROTECTION ACT 1986

The Western Australian EP Act was created to provide for an Environmental Protection Authority (the EPA) that has the responsibility for:

- prevention, control and abatement of pollution and environmental harm
- conservation, preservation, protection, enhancement and management of the environment
- matters incidental to or connected with the above.

The EPA is responsible for providing the guidance and policy under which environmental assessments are conducted. It conducts environmental impact assessments (based on the information provided by the proponent), initiates measures to protect the environment and provides advice to the Minister responsible for environmental matters.

WESTERN AUSTRALIAN BIODIVERSITY CONSERVATION ACT 2016

The Western Australian BC Act provides for the conservation, protection and ecologically sustainable use of biodiversity and biodiversity components in Western Australia.

Threatened Species

Threatened species (both flora and fauna) and ecological communities (see below) that meet the categories listed within the BC Act are protected under this legislation and require authorisation by the Minister to take or disturb. These are known as Threatened Flora, Threatened Fauna and Threatened Ecological Communities. The conservation categories of Critically Endangered, Endangered and Vulnerable are detailed in **Table 16**; these categories align with those of the EPBC Act. Some State-listed threatened species and ecological communities are provided with additional protection as they are also listed under the Commonwealth EPBC Act (see **Table 15** for conservation status category descriptions).

The most recent Western Australian flora and fauna listings were published in the Government Gazette on 6 October 2023 (Western Australian Government 2023a) and ecological communities listings on 26 May 2023 (Western Australian Government 2023b).

Priority-Listed Species

Flora are listed as PF where populations are geographically restricted or threatened by local processes, or where there is insufficient information to formally assign them to TF categories. Whilst PF are not specifically listed in the BC Act, some may qualify as being of special conservation interest and thereby have a greater level of protection than unlisted species.

There are three categories covering Western Australian-listed TF and four categories covering PF species which are outlined in **Table 16**. PF for Western Australia are regularly reviewed by the DBCA whenever new information becomes available, with species status altered or removed from the list when data indicates that they no longer meet these requirements.

Conservation significant fauna species are listed by the DBCA as Priority Fauna where populations are geographically restricted or threatened by local processes, or where there is insufficient information to formally assign them to threatened fauna categories. Whilst Priority Fauna are not specifically listed in the BC Act, these have a greater level of significance than other native species. The categories covering Priority Fauna species are outlined in **Table 16**.

Flora and fauna species may be listed as being of special conservation interest if they have a naturally low population, have a restricted natural range, are subject to or recovering from a significant population decline or reduction of range or are of special interest, and the Minister considers that taking may result in depletion of the species. Migratory species and those subject to international agreement are also listed under the Act. These are known as 'specially protected species' in the BC Act.

Table 16: Conservation category definitions for Western Australian flora and fauna (DBCA 2023a)

Conservation Category Definitions for Western Australian Fauna and Flora	
Threatened, Extinct and Specially Protected fauna or flora[1] are species[2] which have been adequately searched for and are deemed to be, in the wild, threatened, extinct or in need of special protection, and have been gazetted as such. **Categories of Threatened, Extinct and Specially Protected fauna and flora are:**	
T	**Threatened species** Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act). **Threatened fauna** is the species of fauna that are listed as critically endangered, endangered or vulnerable threatened species. **Threatened flora** is the species of flora that are listed as critically endangered, endangered or vulnerable threatened species. The assessment of the conservation status of threatened species is in accordance with the BC Act listing criteria and the requirements of Ministerial Guideline Number 1 and Ministerial Guideline Number 2 that adopts the use of the International Union for Conservation of Nature (IUCN) Red List of Threatened Species Categories and Criteria[3], and is based on the national distribution of the species.

Conservation Category Definitions for Western Australian Fauna and Flora	
CR	*Critically endangered species* Threatened species considered to be "*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*". Listed as critically endangered undersection 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines.
EN	*Endangered species* Threatened species considered to be "*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*". Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines.
VU	*Vulnerable species* Threatened species considered to be "*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*". Listed as vulnerable undersection 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines.
Extinct species **Listed by order of the Minister as extinct under section 23(1) of the BC Act as extinct or extinct in the wild.**	
EX	*Extinct species* Species where "*there is no reasonable doubt that the last member of the species has died*", and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).
EW	*Extinct in the wild species* Species that "*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*", and listing is otherwise in accordance with the ministerial guidelines (section 25of the BC Act). Currently there are no fauna or flora species listed as extinct in the wild.
Specially protected species Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection. Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as specially Protected species.	
MI	*Migratory species* Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act). Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA)[4], China (CAMBA)[5] and The Republic of Korea (ROKAMBA)[6], and fauna subject to the *Convention on the Conservation of Migratory Species of Wild Animals* (Bonn Convention)[7], an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.
CD	*Species of special conservation interest (conservation dependent)* Species of special conservation need that are dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act). Currently only fauna are listed as species of special conservation interest.
OS	*Other specially protected species* Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act). Currently only fauna are listed as species otherwise in need of special protection.

Conservation Category Definitions for Western Australian Fauna and Flora	
P	**Priority species** Priority is not a listing category under the BC Act. All fauna and flora are protected in WA following the provisions in Part 10 of the BC Act. The protection applies even when a species is not listed as threatened or specially protected, and regardless of land tenure (State managed land (Crown land), private land, or Commonwealth land). Species that may possibly be threatened species that do not meet the criteria for listing under the BC Act because of insufficient survey or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of prioritisation for survey and evaluation of conservation status so that consideration can be given to potential listing as threatened. Species that are adequately known, meet criteria for near threatened, or are rare but not threatened, or that have been recently removed from the threatened species list or conservation dependent or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring. Assessment of priority status is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.
1	*Priority 1: Poorly-known species – known from few locations, none on conservation lands* Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, for example, agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. These species are in urgent need of further survey.
2	*Priority 2: Poorly-known species – known from few locations, some on conservation lands* Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, for example, national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under threat from known threatening processes. These species are in urgent need of further survey.
3	*Priority 3: Poorly-known species – known from several locations* Species that are known from several locations and the species does not appear to be under imminent threat or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. These species need further survey.
4	*Priority 4: Rare, Near Threatened and other species in need of monitoring* (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands. (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent. (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy. (d) Other species in need of monitoring.

[1] The definition of flora includes algae, fungi and lichens.

[2] Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

[3] Western Australia has assigned species to threat categories using the *IUCN Red List of Threatened Species Categories and Criteria* since 1996 (referencing all criteria).

[4] JAMBA - first included in the WA migratory species list in 1980.

[5] CAMBA - first included in the WA migratory species list in 2010.

[6] ROKAMBA - first included in the WA migratory species list in 2010.

[7] Bonn Convention (Birds) - first included in the WA migratory species list in 2015.

Threatened and Priority Ecological Communities

Western Australian TECs are protected under the BC Act and are categorised much like those of the EPBC Act. Western Australian definitions and criteria for TECs are shown in **Table 17**.

Currently described TECs are listed on the DBCA website, with the most recent list endorsed by the Minister for Environment published in the Government Gazette on 26 May 2023 (Western Australian Government 2023c) and updated by DBCA on 28 November 2023 (DBCA 2023b).

DBCA also maintains a list of Priority Ecological Communities (PECs). PECs include potential TECs that do not meet survey criteria, or that are not adequately defined. They are not protected under legislation but are taken into consideration as part of the environmental approvals process. Currently described PECs are listed on the DBCA website, with the most recent list dated 19 June 2023 (DBCA 2023c). Currently described PECs are listed on the DBCA website, with the most recent list dated 21 December 2022 (Species and Communities Program, DBCA 2022).

Definitions and criteria for PECs are shown in **Table 17**.

Table 17: DBCA definitions and criteria for TECs and PECs (DBCA 2023d)

Criteria	Definition
Listed Ecological Communities	
Collapsed ecological communities (CO)	An ecological community listed by order of the Minister as collapsed under section 31(1) of the BC Act. As determined by criteria set out in section 32 of the BC Act, an ecological community is eligible for listing as a collapsed ecological community at a particular time if, at that time — (a) there is no reasonable doubt that the last occurrence of the ecological community has collapsed; or (b) the ecological community has been so extensively modified throughout its range that no occurrence of it is likely to recover — (i) its species composition or structure; or (ii) its species composition and structure.
Critically endangered ecological communities (CR)	A threatened ecological community listed in the category of critically endangered under section 27(1)(a) of the BC Act, as determined by criteria set out in section 28 of the BC Act and the ministerial guidelines. A critically endangered ecological community faces an extremely high risk of becoming eligible for listing as a collapsed ecological community in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines.
Endangered ecological communities (EN)	A threatened ecological community listed in the category of endangered ecological community under section 27(1)(b) of the BC Act, as determined by criteria set out in section 29 of the BC Act and the ministerial guidelines. A threatened ecological community faces a very high risk of becoming eligible for listing as a collapsed ecological community in the near future, as determined in accordance with criteria set out in the ministerial guidelines.
Vulnerable ecological communities (VU)	A threatened ecological community listed in the category of vulnerable ecological community under section 27(1)(c) of the BC Act, as determined by criteria set out in section 30 of the BC Act and the ministerial guidelines. A vulnerable ecological community faces a high risk of becoming eligible for listing as a collapsed ecological community in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines.
Priority ecological communities	
Priority One (P1)	*Poorly known ecological communities – very few occurrences, very restricted distribution* Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤5 occurrences or a total area of ≤100ha). Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g., within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.
Priority Two (P2)	*Poorly known ecological communities – few occurrences, restricted distribution* Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Criteria	Definition
Priority Three (P3)	*Poorly known ecological communities inadequately surveyed or not well defined* Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them. This category includes three sub-categories: i. Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation. ii. Communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years). iii. Communities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change, etc.
Priority Four (P4)	*Adequately known ecological communities – rare, near threatened, or recently removed from the threatened list* Ecological communities that are adequately known and are rare but not threatened near threatened, or have been recently removed from the threatened list. These communities require regular monitoring. i. Rare: ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands. ii. Near Threatened: ecological communities that are considered to have been adequately surveyed and that do not qualify as conservation dependent, but that are close to qualifying for a higher threat category. iii. Ecological communities that have been removed from the list of threatened communities during the past five years.
Priority Five (P5)	*Conservation Dependent Ecological Communities* Ecological Communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

FLORA CRITERIA

Other Significant Flora

According to the Flora and Vegetation Technical Guidance (EPA 2016a) other than being listed as Threatened or Priority Flora, a species can be considered as significant if it is considered to be:

- locally endemic or association with a restricted habitat type (e.g. Groundwater Dependent Ecosystems, Sheet Flow Dependent Vegetation)
- a new species or has anomalous features that indicate a potential new species
- at the extremes of range, recently discovered range extensions (generally considered greater than 100 km or in a different bioregion), or isolated outliers of the main range
- unusual species, including restricted subspecies, varieties or naturally occurring hybrids
- relictual status, being representative of taxonomic groups that no longer occur widely in the broader landscape.

Introduced Flora

Introduced plant species, known as weeds, are plants that are not indigenous to an area and have been introduced either directly or indirectly (unintentionally) through human activity. Species are regarded as introduced if they are listed as 'alien' on *FloraBase* (Western Australian Herbarium [WAH] 1998a-2024) and are designated with an asterisk (*) in this document.

Weeds of National Significance

At a national level there are 32 weed species listed as Weeds of National Significance (WoNS) (Weeds Australia & Centre for Invasive Species Solutions 2021). The Commonwealth *Australian Weeds Strategy 2017-2027* (Invasive Plants and Animals Committee 2016) describes broad goals and objectives to manage these species.

Declared Pest Plants

The Western Australian Organism List (WAOL) details organisms listed as Declared Pests under the *Biosecurity and Agriculture Management Act 2007* (BAM Act). Under the BAM Act, Declared Pests are listed as one of the three categories, or exempt:

- C1 (exclusion), that applies to pests not established in Western Australia; control measures are to be taken to prevent their entry and establishment
- C2 (eradication), that applies to pests that are present in Western Australia but in low numbers or in limited areas where eradication is still a possibility
- C3 (management), that applies to established pests where it is not feasible or desirable to manage them in order to limit their damage
- exempt (no category).

VEGETATION CRITERIA

Other Significant Vegetation

According to the Flora and Vegetation Technical Guidance (EPA 2016a) other than being listed as a TEC or PEC, vegetation can be considered as significant if it is considered to have:

- restricted distribution
- a degree of historical impact from threatening processes
- a role as a refuge
- provides an important function required to maintain ecological integrity of a significant ecosystem.

[delete below if not relevant]

Groundwater Dependent and Sheet Flow Dependent Mulga vegetation may be considered as significant and are described below.

Groundwater Dependent Vegetation

Groundwater Definition

Groundwater is water that is found in the saturated zone of the soil, where all soil pores are filled with water. The water table is the upper surface of the saturated zone in an unconfined aquifer. Groundwater may also occur as a perched aquifer located above unsaturated rock formations as a result of a discontinuous permeable layer or held under pressure in a confined aquifer (Goulburn-Murray Water 2010).

Groundwater Dependent Ecosystems Definition

Groundwater Dependent Ecosystems (GDEs) have been defined as ecosystems that are dependent on groundwater for their survival at some stage or stages of their lifecycle, however groundwater use cannot be equated with groundwater dependence (Eamus 2009). In some contexts (including that of a flora and vegetation assessment), GDEs are also known as Groundwater Dependent Vegetation (GDV).

Hatton and Evans (1998) identified four types of GDEs based on their geographic setting: terrestrial vegetation (vegetation communities and dependent fauna that have seasonal or episodic dependence on groundwater), river base flow systems (aquatic and riparian ecosystems that exist in or adjacent to streams that are fed by groundwater base flow), aquifer and cave ecosystems, and wetlands.

Eamus *et al.* (2006) identified three primary classes based on type of groundwater reliance:

1. Aquifer and cave ecosystems.
2. All ecosystems dependent on the surface expression of groundwater:
   a) river base flows
   b) wetlands, swamplands
   c) seagrass beds in estuaries
   d) floodplains
   e) mound springs

f) riparian vegetation
g) saline discharge to lakes
h) low lying forests.

3. All ecosystems dependent on the subsurface presence of groundwater, often accessed via the capillary fringe (non-saturated zone above the water table) when roots penetrate this zone:
   a) River Red Gum (*Eucalyptus camaldulensis*) forests
   b) Banksia woodlands
   c) Riparian vegetation in the wet/dry tropics.

Atlas of Groundwater Dependent Ecosystems

The Groundwater Dependent Ecosystems Atlas (BoM 2024b) indicates the presence of known GDEs and Inflow Dependent Ecosystems (IDEs) in Australia.

An Inflow Dependent Ecosystem is one in which the vegetation within the landscape is likely to be accessing water in addition to rainfall, from soil or surface water or groundwater, assessed using remotely sensed data. The likelihood of a landscape using additional water is rated from one to 10 (low to high), with a rating above six indicating that a landscape is likely to be inflow dependent (BoM 2024b).

ENVIRONMENTALLY SENSITIVE AREAS

There are a number of areas within Western Australia identified as being of environmental significance within which the exemptions to the Native Vegetation Clearing Regulations do not apply. These are referred to as Environmentally Sensitive Areas (ESAs), and are declared under section 51B of the EP Act and described in the *Environmental Protection (Environmentally Sensitive Areas) Notice*.

CONSERVATION ESTATE

The National Reserve System is a network of protected areas managed for conservation under international guidelines. The objective of placing areas of bushland into the Conservation Estate is to achieve and maintain a comprehensive, adequate and representative reserve system for Western Australia. The Conservation and Parks Commission is the vesting body for conservation lands, forest and marine reserves that are managed by DBCA (Government of Western Australia 2018).

APPENDIX TWO FIELD SURVEY CRITERIA

Table 18: NVIS structural formation terminology, terrestrial vegetation (NVIS Technical Working Group & DotEE 2017)

	Cover characteristics

Table 20: Vegetation condition scale for the South West and Interzone Botanical Provinces (EPA 2016a)

Condition rating	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance or damage caused by human activities since European settlement.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species. Damage to trees caused by fire, the presence of non-aggressive weeds and occasional vehicle tracks.
Very Good	Vegetation structure altered, obvious signs of disturbance. Disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbances. Retains basic vegetation structure or ability to regenerate it. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. Disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds at high density, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees and shrubs.

Table 21: Grading system for the assessment of potential nest trees for Black Cockatoos (Bamford 2024)

Class	Description of tree and hollows/activity
1	Activity at hollow observed; adult (or immature) bird seen entering or emerging from hollow. Can also be used for a known nest tree active in the previous 12 months (although this should be noted in the description). Note that activity at a hollow does not absolutely mean that breeding is occurring unless a young bird in hollow is observed.
2	Hollow of suitable size visible with chew marks around entrance. Record if chew-marks are recent or old.
3	Potentially suitable hollow visible but no chew marks present at entrance; or potentially suitable hollow suspected to be present - as suggested by structure of tree, such as large, vertical trunk broken off at a height of >8m; but note that hollow height is contextual. Carnaby's Black-Cockatoo will nest in hollows <5m so in a Wheatbelt breeding site a lower criterion may be more appropriate.
4	Tree with large hollows or broken branches that might contain large hollows, but hollows or potential hollows are not vertical or near-vertical; thus a tree with or likely to have hollows of sufficient size but not to have hollows of the angle preferred by Black-Cockatoos. Also, a tree with hollows that might be large enough for a Black-Cockatoo, but in a trunk or branch of insufficient diameter to contain a hollow of preferred size. Trees with low but otherwise suitable hollows can also be assigned a rank or 4, depending on the context (eg south-west forest or Wheatbelt).
5	Tree lacking large hollows or broken branches that might have large hollows; a tree with more or less intact branches and a spreading crown.
Significance	**Significance rank for Class 3 and above trees**
1 (Very High Value)	Very high value: large tree with obvious large vertical hollow above 5 m (height above ground) with future potential to create more hollows, ideal for Black Cockatoos
2 (High Value)	High value: large/medium (often healthy) tree with suitable vertical or near vertical hollow with potential to create future hollows
3 (Moderate-Low Value)	Moderate/low value: outer diameter of hollow at least 10 cm, height from ground at least 3 m, often in smaller trees or stags with limited potential for future hollows

Table 22: Black Cockatoo foraging quality scoring tool (DAWE 2022a)

Foraging quality scoring tool template				
Starting Score		**Carnaby's Cockatoo**	**Baudin's Cockatoo**	**Forest Red-tailed Black Cockatoo**
10		**Start at a score of 10** if your site is native shrubland, kwongan heathland or woodland, dominated by proteaceous plant species such as Banksia spp. (including Dryandra spp.), Hakea spp. and Grevillea spp., as well as native eucalypt woodland and forest that contains foraging species, within the range of the species, including along roadsides and parkland cleared areas. Also includes planted native vegetation. **This tool only applies to sites equal to or larger than 1 hectare in size.**	**Start at a score of 10** if your site is native eucalypt woodlands and forest, and proteaceous woodland and heath, particularly Marri, within the range of the species, including along roadsides and parkland cleared areas. Can include planted vegetation. **This tool only applies to sites equal to or larger than 1 hectare in size**	**Start at a score of 10** if your site is Jarrah or Marri woodland and/or forest, or if it is on the edge of Karri forest, or if Wandoo and Blackbutt occur on the site, within the range of the subspecies, including along roadsides and parkland cleared areas. **This tool only applies to sites equal to or larger than 1 hectare in size.**
Attribute	**Sub-tractions**	**Context adjustor (attributes reducing functionality of foraging habitat)**		

Foraging quality scoring tool template				
Starting Score		**Carnaby's Cockatoo**	**Baudin's Cockatoo**	**Forest Red-tailed Black Cockatoo**
Foraging Potential	**-2**	**Subtract 2** from your score if there is no evidence of feeding debris on your site.	**Subtract 2** from your score if there is no evidence of feeding debris on your site.	**Subtract 2** from your score if there is no evidence of feeding debris on your site.
Connectivity	**-2**	**Subtract 2** from your score if you have evidence to conclude that there is no other foraging habitat within 12 km of your site.	**Subtract 2** from your score if you have evidence to conclude that there is no other foraging habitat within 12 km of your site.	**Subtract 2** from your score if you have evidence to conclude that there is no other foraging habitat within 12 km of your site.
Proximity to breeding	**-2**	**Subtract 2** if you have evidence to conclude that your site is more than 12 km from breeding habitat.	**Subtract 2** if you have evidence to conclude that your site is more than 12 km from breeding habitat.	**Subtract 2** if you have evidence to conclude that your site is more than 12 km from breeding habitat.
Proximity to roosting	**-1**	**Subtract 1** if you have evidence to conclude that your site is more than 20 km from a known night roosting habitat.	**Subtract 1** if you have evidence to conclude that your site is more than 20 km from a known night roosting habitat.	**Subtract 1** if you have evidence to conclude that your site is more than 20 km from a known night roosting habitat.
Impact from significant plant disease	**-1**	**Subtract 1** if your site has disease present (e.g. Phytophthora spp. or Marri canker) and the disease is affecting more than 50% of the preferred food plants present.	**Subtract 1** if your site has disease present (e.g. Phytophthora spp. or Marri canker) and the disease is affecting more than 50% of the preferred food plants present.	**Subtract 1** if your site has disease present (e.g. Phytophthora spp. or Marri canker) and the disease is affecting more than 50% of the preferred food plants present.
Total Score		*Enter score*	*Enter score*	*Enter score*
Appraisal		To support your habitat score, you should provide an overall appraisal of the habitat on the impact site and within 20km of the impact area to clearly explain and justify the score. It should include discussion on the foraging habitat's proximity to other resources (e.g. exact distance to proximate resources), frequency of use of proximate sites, the degree of evidence and description of vegetation type and condition.		

Table 23: Black Cockatoo foraging value scoring system (Bamford 2020)

Site condition: vegetation composition, condition and structure scoring			
Site Score	**Carnaby's Cockatoo**	**Baudin's Cockatoo**	**Forest Red-tailed Black Cockatoo**
0	No foraging value: no Proteaceae, Eucalypts or other potential sources of food. Examples: • Water bodies (e.g. salt lakes, dams, rivers) • Bare ground • Developed sites devoid of vegetation (e.g. infrastructure, roads, gravel pits) or with vegetation of no food value (e.g. some suburban landscapes) • Mown grass.	No foraging value: no Eucalypts or other potential sources of food. Examples: • Water bodies (e.g. dams, rivers) • Bare ground • Developed sites devoid of vegetation (e.g. infrastructure, roads, gravel pits).	No foraging value: no Eucalypts or other potential sources of food. Examples: • Water bodies (e.g. dams, rivers) • Bare ground • Developed sites devoid of vegetation (e.g. infrastructure, roads, gravel pits).
1	Negligible to low foraging value. Examples: • Scattered specimens of known food plants but projected foliage cover of these is < 2%. This could include urban areas with scattered foraging trees. • Paddocks that are lightly vegetated with melons or other known food-source (weeds e.g. *Erodium* spp.) that represent a short-term and/or seasonal food source • Blue Gum plantations (foraging by Carnaby's Cockatoos has been reported but appears to be unusual).	Negligible to low foraging value. Scattered specimens of known food plants but projected foliage cover of these < 1%. This could include urban areas with scattered foraging trees.	Negligible to low foraging value. Scattered specimens of known food plants but projected foliage cover of these < 1%. Could include urban areas with scattered foraging trees.
2	Low foraging value. Examples: • Shrubland in which species of foraging value, such as shrubby banksias, have < 10% projected foliage cover • Woodland with tree banksias 2-5% projected foliage cover • Open eucalypt woodland/mallee of small-fruited species • Paddocks that are densely vegetated with melons or other known food-source (weeds e.g. *Erodium* spp.) that represent a short-term and/or seasonal food source.	Low foraging value. Examples: ▪ Woodland with scattered specimens of known food plants (e.g. Marri and Jarrah) 1-5% projected foliage cover • Urban areas with scattered foraging trees.	Low foraging value. Examples: ▪ Woodland with scattered specimens of known food plants (e.g. Marri, Jarrah or Sheoak) 1-5% projected foliage cover • Urban areas with scattered food plants such as Cape Lilac, *Eucalyptus caesia* and *E. erythrocorys*.

Site condition: vegetation composition, condition and structure scoring			
Site Score	**Carnaby's Cockatoo**	**Baudin's Cockatoo**	**Forest Red-tailed Black Cockatoo**
3	Low to Moderate foraging value. Examples: ▪ Shrubland in which species of foraging value, such as shrubby banksias, have 10-20% projected foliage cover ▪ Woodland with tree banksias 5-20% projected foliage cover ▪ Eucalypt Woodland/Mallee of small-fruited species • Eucalypt Woodland with Marri < 10% projected foliage cover.	Low to Moderate foraging value. Examples: ▪ Eucalypt Woodland with known food plants (especially Marri) 5-20% projected foliage cover ▪ Parkland-cleared Eucalypt Woodland/Forest with known food plants 10-40% projected foliage cover (poor long-term viability without management) • Younger areas of (managed) revegetation with known food plants 10-40% projected foliage cover (establishing food sources with good long-term viability).	Low to Moderate foraging value. Examples: ▪ Eucalypt Woodland with known food plants (especially Marri and Jarrah) 5-20% projected foliage cover ▪ Parkland-cleared Eucalypt Woodland/Forest with known food plants 10-40% projected foliage cover (poor long-term viability without management) • Younger areas of (managed) revegetation with known food plants 10-40% projected foliage cover (establishing food sources with good long-term viability).
4	Moderate foraging value. Examples: ▪ Woodland/low forest with tree banksias (of key species *B. attenuata* and *B. menziesii*) 20-40% projected foliage cover ▪ Kwongan/Shrubland in which species of foraging value, such as shrubby banksias, have 20-40% projected foliage cover • Eucalypt Woodland/Forest with Marri 20-40% projected foliage cover.	Moderate foraging value. Examples: ▪ Marri-Jarrah Woodland/Forest with 20-40% projected foliage cover ▪ Marri-Jarrah Forest with 40-60% projected foliage cover but vegetation condition reduced due to weed invasion and/or some tree deaths ▪ Eucalypt Woodland/Forest with diverse, healthy understorey and known food trees (especially Marri) 10-20% projected foliage cover • Orchards with highly desirable food sources (e.g. apples, pears, some stone fruits)	Moderate foraging value. Examples: ▪ Marri-Jarrah Woodland/Forest with 20-40% projected foliage cover ▪ Marri-Jarrah Forest with 40-60% projected foliage cover but vegetation condition reduced due to weed invasion and/or some tree deaths • Sheoak Forest with 40-60% projected foliage cover.

Site condition: vegetation composition, condition and structure scoring			
Site Score	**Carnaby's Cockatoo**	**Baudin's Cockatoo**	**Forest Red-tailed Black Cockatoo**
5	Moderate to High foraging value. Examples: ▪ Banksia Low Forest (of key species *B. attenuata* and *B. menziesii*) with 40-60% projected foliage cover ▪ Banksia Low Forest (of key species *B. attenuata* and *B. menziesii*) with > 60% projected foliage cover but vegetation condition reduced due to weed invasion and/or some tree deaths • Pine plantations with trees more than 10 years old (but see pine modifier score if relevant).	Moderate to High foraging value. Examples: ▪ Marri-Jarrah Forest with 40-60% projected foliage cover • Marri-Jarrah Forest with > 60% projected foliage cover but vegetation condition reduced due to weed invasion and/or some tree deaths.	Moderate to High foraging value. Examples: ▪ Marri-Jarrah Forest with 40-60% projected foliage cover ▪ Marri-Jarrah Forest with > 60% projected foliage cover but vegetation condition reduced due to weed invasion and/or some tree deaths • Sheoak Forest with > 60% projected foliage cover.
6	High foraging value. Example: • Banksia Low Forest (of key species *B. attenuata* and *B. menziesii*) with > 60% projected foliage cover and vegetation condition good with low weed invasion and/or low tree deaths (indicating it is robust and unlikely to decline in the medium term).	High foraging value. Example: • Marri-Jarrah Forest with > 60% projected foliage cover and vegetation condition good with low weed invasion and/or low tree deaths (indicating it is robust and unlikely to decline in the medium term).	High foraging value. Example: • Marri-Jarrah Forest with > 60% projected foliage cover and vegetation condition good with low weed invasion and/or low tree deaths (indicating it is robust and unlikely to decline in the medium term).
Site context	Percentage of the 'local' (i.e. within 15 km) area native vegetation that the survey area represents		
Score	**'Local' breeding known/likely**	**'Local' breeding unlikely**	
3	>5%	>10%	
2	1-5%	5-10%	
1	0.1-1%	1-5%	
0	<0.1%	<1%	
Species density/stocking rate			
1	Species is regularly reported/recorded and/or abundant foraging evidence or Direct evidence lacking but at least moderate condition score and site is part of connected habitat where Black Cockatoos are known to occur.		
0	Species is irregularly or very infrequently reported and little or no foraging evidence is present.		

APPENDIX THREE TEC ASSESSMENT CRITERIA

BANKSIA WOODLANDS TEC

The criteria outlined in the *Approved Conservation Advice for the Banksia Woodlands of the Swan Coastal Plain* TEC (TSSC 2016) was used to determine if the TEC occurs, as below.

The key characteristics for vegetation to be included in this TEC are that:

- it occurs on the Swan Coastal Plain IBRA region, including the Dandaragan Plateau and adjacent to the Jarrah Forest IBRA region on the lower parts of the Darling and Whicher escarpments
- it generally occurs on low-nutrient sandy substrates, including sandy colluvium and aeolean sands although may occur occasionally on other substrates (usually on the Bassendean and Spearwood sands)
- the structure is typically low woodland or forest with a distinct upper stratum of low trees dominated or co-dominated by one or more of four characteristic Banksia species (*Banksia attenuata*, *B. menziesii*, *B. prionotes*, *B. ilicifolia*) although emergent trees are sometimes present but cannot be the dominant stratum
- the understorey is typically a highly diverse shrub and herb layer
- it meets the thresholds in the table that follows (with vegetation type mapping extrapolated outside the survey area to be included in the extent calculations).

Table 24: Condition categories and thresholds for inclusion in the Banksia Woodlands TEC (TSSC 2016)

Condition threshold	Indicative condition measures (typical)		Minimum patch size
	Native vegetation composition[1]	Weed cover	
Pristine	Native plant species diversity	Native plant species diversity	No minimum
Excellent	High native plant species	High native plant species	0.5 ha / 5,000 m^2
Very Good	Moderate native plant species	Moderate native plant species	1 ha / 10,000 m^2
Good	Low native plant species	Low native plant species	2 ha / 20,000 m^2
Degraded	Very low native plant species	Very low native plant species	Not representative
Completely Degraded	Very low to no native species	Very low to no native species	Not representative

[1] Relative to expected natural range of diversity for that vegetation (e.g. Floristic Community Type; FCT), where comparative data exists.

Whilst FCTs, as defined in Gibson *et al.* (1994) can be used as a guide they do not necessarily define all vegetation that may be included in the TEC. Vegetation defined by Gibson *et al.* FCTs may be listed as TECs in Western Australia or as Priority Ecological Communities (PECs) by DBCA (combined into the EPBC-listed Banksia Woodlands of the Swan Coastal Plain TEC). Some Banksia woodlands on the eastern side of the Swan Coastal Plain (FCT 20 group) are not included in this TEC and have different conservation listings; these Banksia woodland types are not subject to the same thresholds as above to be considered representative of the relevant TEC or PEC.

TUART WOODLANDS TEC

The EPBC-listed critically endangered *Tuart (Eucalyptus gomphocephala) woodlands and forests of the Swan Coastal Plain ecological community* ('Tuart Woodlands') TEC was declared in 2019.

The criteria for inclusion in the TEC, as outlined in the Approved Conservation Advice (DotEE 2019), includes:

- confirming that the vegetation meets the diagnostic criteria (primarily being located within the Swan Coastal Plain and having at least two mature, living Tuart trees in the upper stratum with a gap of less than 60 m between outer edges of the canopies)
- the mapped extent of Tuart-dominated vegetation (woodlands, forests or mallee) meets various mapping criteria, and takes into consideration the entire extent of Tuart woodland regardless of changes in condition, structure or complexity, and extends to 30 m beyond the outer canopy of mature and dead Tuart trees (DBH greater than 15 cm). The Approved Conservation Advice includes additional information regarding

mapping and condition assessment, noting that the condition assessment scale is not the equivalent of other scales generally used in Western Australia.
