- patches occupying less than 0.5 ha are not included in the TEC; patches of 0.5-5 ha may be representative depending on vegetation condition; patches of 5 ha or greater that meet the diagnostic criteria are included in the TEC
- Tuart woodlands over 5 ha in extent do not require additional surveys to demonstrate inclusion in the TEC; smaller extents (0.5-5 ha) require ground surveys to determine inclusion, as per the following table.

Table 25: Condition categories and thresholds for inclusion in the Tuart Woodlands TEC (DotEE 2019)

Patch size Biotic threshold	≥2 ha - <5 ha	≥0.5 ha - <2 ha
Very high condition **≥80% of all understorey vegetation cover is native** **Or** **At least 12 native understorey species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)**	Medium sized patches with very high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY	Smaller patches with very high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY
High condition **≥60% of all understorey vegetation cover is native** **Or** **At least 8 native understorey species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)**	Medium sized patches with high condition understorey. PART OF THE PROTECTED ECOLOGICAL COMMUNITY	Smaller patches with high condition understorey. AND That either: have an important landscape role (≤100 m to native vegetation)* OR have a habitat role (≥2 very large trees per 0.5 ha)* OR show regeneration (≥15 seedlings and/or saplings per 0.5 ha)* PART OF THE PROTECTED ECOLOGICAL COMMUNITY
Moderate condition **≥50% of all understorey vegetation cover is native** **Or** **At least 4 native understorey species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)**	Medium sized patches with moderate condition understorey. AND That either: have an important landscape role (≤100 m to native vegetation)* OR have a habitat role (≥2 very large trees per 0.5 ha)* OR show regeneration (≥15 seedlings and/or saplings per 0.5 ha)* PART OF THE PROTECTED ECOLOGICAL COMMUNITY	NOT PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)
Poor **Has minimal or no native cover and species richness. That is:** **<50% of all understorey vegetation cover is native** **And** **Less than 4 native understorey species per 0.01 ha (10 m x 10 m plot or equivalent sample unit)**	NOT PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)	NOT PART OF THE PROTECTED ECOLOGICAL COMMUNITY (but may be a focus for local protection or restoration)

Note:

- understorey is considered as being <3 m in height (i.e. ground or mid stratum)
- *'important landscape role' or 'habitat role' takes into consideration:
  - proximity to other native vegetation that has ≥50% of vegetation cover being native

- the patch contains ≥2 very large trees (≥50 cm DBH) of any native species per 0.5 ha
- the patch shows evidence of natural regeneration of any native Eucalypt species (<15 cm DBH) of at least 15 individuals per 0.5 ha.

APPENDIX FOUR LIKELIHOOD ASSESSMENTS

Table 26: Flora database results and likelihood assessment

Blue shading indicates high likelihood; dark blue indicates species is known (recorded) from the survey area

DBCA*	PMST**	Species name	Habitat from *FloraBase*	Flowering	Likelihood of occurrence	
					Desktop	Post-survey
		Threatened Flora* **				
	Likely	*Andersonia gracilis*	White/grey sand, sandy clay, gravelly loam. Winter-wet areas, near swamps.	Sep-Nov	Unlikely	Very Unlikely
	Likely	*Anigozanthos viridis* subsp. *terraspectans*	Grey sand, clay loam. Winter-wet depressions.	Aug-Sep	Very Unlikely	Very Unlikely
	May	*Banksia mimica*	White or grey sand over laterite, sandy loam.	Dec or Jan-Feb	Unlikely	Very Unlikely
WAH, TP	Likely	*Caladenia huegelii*	Grey-brown sand, clay loam.	Sep-Oct	Unlikely	Very Unlikely
	May	*Paracaleana dixonii*	Grey sand over granite.	Oct-Jan	Unlikely	Very Unlikely
WAH, TP		*Calectasia elegans*	Clayey loam. Winter-wet clay flats.	Jul-Aug	Unlikely	Very Unlikely
WAH		*Darwinia carnea*	Lateritic loam & gravel.	Oct-Dec	Unlikely	Very Unlikely
	May	*Darwinia foetida*	Low plain with dry grey sand. Plain. Winter wet depression, grey/brown soil. Seasonally wet area.	Oct-Nov	Very Unlikely	Very Unlikely
WAH		*Darwinia meeboldii*	Peaty soils over quartzite. Hill slopes.	Aug-Nov	Unlikely	Very Unlikely
WAH		*Darwinia oxylepis*	Stony, peaty sand. Rocky gullies.	Aug-Nov	Unlikely	Very Unlikely
	Likely	*Diuris micrantha*	Brown loamy clay. Winter-wet swamps in shallow water.	Sep-Oct	Very Unlikely	Very Unlikely
	Likely	*Diuris purdiei*	Grey-black sand, moist. Winter-wet swamps.	Sep-Oct	Very Unlikely	Very Unlikely
	Likely	*Drakaea elastica*	White or grey sand. Low-lying situations adjoining winter-wet swamps.	Oct-Nov	Very Unlikely	Very Unlikely
	Likely	*Drakaea micrantha*	White-grey sand.	Sep-Oct	Unlikely	Very Unlikely
	May	*Eleocharis keigheryi*	Clay, sandy loam. Emergent in freshwater, creeks, claypans.	Aug-Nov	Very Unlikely	Very Unlikely
	Known	*Eucalyptus argutifolia*	Shallow soils over limestone. Slopes or gullies of limestone ridges, outcrops.	Mar-Apr	Unlikely	Very Unlikely
	Likely	*Grevillea christineae*	Clay loam, sandy clay, often moist.	Aug-Sep	Very Unlikely	Very Unlikely
WAH	Known	*Grevillea curviloba*	Grey sand, sandy loam. Winter-wet heath.	Aug-Oct	Unlikely	Very Unlikely
	May	*Macarthuria keigheryi*	White or grey sand.	Sep-Dec or Feb-Mar	Unlikely	Very Unlikely
WAH	Known	*Marianthus paralius*	White sand over limestone. Low coastal cliffs.	Sep-Nov	Unlikely	Very Unlikely
	Likely	*Synaphea* sp. Fairbridge Farm (D.Papenfus 696)	Sandy with lateritic pebbles. Near winter-wet flats, in low woodland with weedy grasses.	Oct	Very Unlikely	Very Unlikely

DBCA*	PMST**	Species name	Habitat from *FloraBase*	Flowering	Likelihood of occurrence	
					Desktop	Post-survey
	May	*Thelymitra dedmaniarum*	Eucalyptus wandoo (wandoo) and *Eucalyptus accedens* (powderbark wandoo) woodlands on red-brown sandy-loam soil associated with dolerite and granite outcrops.	Nov-Dec or Jan	Very Unlikely	Very Unlikely
WAH		*Thelymitra variegata*	Sandy clay, sand, laterite.	Jun-Sep	Unlikely	Very Unlikely
	Likely	*Trithuria occidentalis*	Shallows, winter-wet claypans in open *Melaleuca* shrubland. Known from one population in the Ellenbrook area.		Very Unlikely	Very Unlikely
		DBCA Priority 1				
WAH, TP		*Baeckea* sp. Limestone (N. Gibson & M.N. Lyons 1425)	Brown, sandy loam.	Sep-Feb	May	Very Unlikely
WAH		*Drosera patens*	Sandy soils. Margins of winter-wet depressions, swamps and lakes.	Dec, Feb	May	Very Unlikely
WAH		*Drosera* x *sidjamesii*	Peaty sand. Along lake margins, close to winter high-water line.	Nov-Dec, Jan-Mar	Unlikely	Very Unlikely
WAH		*Grevillea* sp. Ocean Reef (D. Pike Joon 4)	Light yellow-brown sand dune.	Oct-Nov	Unlikely	Very Unlikely
WAH		*Leucopogon maritimus*	White-yellow sand, Quindalup dunes.	Apr-Aug	Very Unlikely	Very Unlikely
WAH		*Stachystemon exilis*	Low lying coastal plains, flats, grey sand.	Oct-Nov	Unlikely	Very Unlikely
		DBCA Priority 2				
WAH, TP		*Acacia benthamii*	Sandy plains over limestone.	Aug-Sep	Likely	Unlikely
WAH		*Drosera x badgerupii*	Black sandy soil, lakeside.	Dec	Unlikely	Very Unlikely
WAH		*Millotia tenuifolia* var. *laevis*	Low dunes, hill crests, slopes. Grey or yellow sand, or red-brown lateritic soil.	Sep-Oct	Unlikely	Very Unlikely
WAH		*Poranthera moorokatta*	Yellow or white sand, loam.	Aug-Nov	Unlikely	Unlikely
WAH		*Thryptomene velutina*	Loamy sand.	Jun-Oct	Unlikely	Very Unlikely
		DBCA Priority 3				
WAH		*Austrostipa mundula*	Grey sand over limestone.	Oct	Unlikely	Very Unlikely
WAH, TP		*Conostylis bracteate*	Sand, limestone. Consolidated sand dunes.	Aug-Sep	Unlikely	Very Unlikely
WAH, TP		*Cyathochaeta teretifolia*	Sand, sandy loam.	Aug-Sep	May	Very Unlikely
WAH		*Dampiera triloba*	Loamy sand near permanent water	Aug-Dec	May	Very Unlikely
WAH		*Pimelea calcicole*	Sand. Coastal limestone ridges.	Sep-Nov	Unlikely	Very Unlikely
WAH		*Sarcozona bicarinate*	White sand.	Aug	Unlikely	Very Unlikely
WAH		*Stylidium paludicola*	Peaty sand over clay. Winter wet habitats. Marri and Melaleuca woodland, Melaleuca shrubland.	Oct-Dec	Unlikely	Very Unlikely
WAH		*Styphelia filifolia*	Sand.	Jan-Jun	Unlikely	Very Unlikely

DBCA*	PMST**	Species name	Habitat from *FloraBase*	Flowering	Likelihood of occurrence	
					Desktop	Post-survey
WAH		*Utricularia oppositiflora*	Sand and loamy clay wet depressions.	Aug-Dec	Very Unlikely	Very Unlikely
		DBCA Priority 4				
WAH		*Anigozanthos humilis* subsp. *chrysanthus*	Grey or yellow sand.	Jul-Oct	May	Unlikely
WAH		*Darwinia macrostegia*	Stony soils, peaty sand. Rocky hillsides, gullies.	May-Jun, Aug-Nov	Very Unlikely	Very Unlikely
WAH		*Eucalyptus foecunda* subsp. *foecunda*	Yellow-white sand, limestone outcropping.	Feb-Mar	Unlikely	Very Unlikely
WAH, TP		*Jacksonia sericea*	Calcareous and sandy soils.	Dec-Feb	Likely	Unlikely
WAH		*Schoenus griffinianus*	White sand.	Sep-Oct	Unlikely	Very Unlikely
WAH		*Stylidium striatum*	Brown clay loam over laterite. Hillslopes. Jarrah/Marri forest, Wandoo woodland.	Oct-Nov	Very Unlikely	Very Unlikely

* WAH = herbarium record (vouchered specimen)

TP = Threatened and Priority Flora Report Form record; may be unconfirmed i.e. without vouchered specimen

** PMST likelihood of occurrence or likelihood of habitat occurring

*** Commonwealth EPBC Act and Western Australian BC Act conservation status

Table 27: Fauna database results and likelihood assessment

Blue shading indicates high likelihood; darker blue indicates species is known (recorded) from the survey area. Species identified by database searches but not included in this assessment are listed in **Table 28**, along with the reason for their exclusion.

Scientific Name	Common name	Conservation status		Database		DBCA records			Likelihood

APPENDIX FIVE PMST AND DANDJOO DATABASE SEARCH RESULTS

Department of Climate Change, Energy, the Environment and Water

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 09-Sep-2024

Summary
Details
- Matters of NES
- Other Matters Protected by the EPBC Act
- Extra Information

Caveat
Acknowledgements

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or ma relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	5
Listed Threatened Species:	66
Listed Migratory Species:	50

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member a listed marine species.

Commonwealth Lands:	72
Commonwealth Heritage Places:	None
Listed Marine Species:	74
Whales and Other Cetaceans:	12
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	11
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	69
Key Ecological Features (Marine):	None
Biologically Important Areas:	9
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Listed Threatened Ecological Communities [Resource Information

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
Assemblages of plants and invertebrate animals of tumulus (organic mound) springs of the Swan Coastal Plain	Endangered	Community known to occur within area	In buffer area only
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area	In feature area
Empodisma peatlands of southwestern Australia	Endangered	Community may occur within area	In feature area
Honeymyrtle shrubland on limestone ridges of the Swan Coastal Plain Bioregion	Critically Endangered	Community likely to occur within area	In buffer area only
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area	In feature area

Listed Threatened Species [Resource Information

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area	In feature area

Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area	In buffer area only
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only

Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Phaethon rubricauda westralis Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat may occur within area	In buffer area only
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area	In feature area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only

Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area	In feature area
Zanda latirostris listed as Calyptorhynchus latirostris Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Breeding known to occur within area	In feature area
FISH			
Galaxiella nigrostriata Blackstriped Dwarf Galaxias, Black-stripe Minnow [88677]	Endangered	Species or species habitat may occur within area	In buffer area only
INSECT			
Hesperocolletes douglasi Douglas' Broad-headed Bee, Rottnest Bee [66734]	Critically Endangered	Species or species habitat may occur within area	In feature area
MAMMAL			
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat known to occur within area	In buffer area only
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat known to occur within area	In feature area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area	In buffer area only
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat may occur within area	In feature area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat likely to occur within area	In buffer area only

Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat likely to occur within area	In buffer area only
PLANT			
Andersonia gracilis Slender Andersonia [14470]	Endangered	Species or species habitat likely to occur within area	In feature area
Anigozanthos viridis subsp. terraspectans Dwarf Green Kangaroo Paw [3435]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Banksia mimica Summer Honeypot [82765]	Endangered	Species or species habitat may occur within area	In feature area
Caladenia huegelii King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat likely to occur within area	In feature area
Caleana dixonii listed as Paracaleana dixonii Sandplain Duck Orchid [87944]	Endangered	Species or species habitat may occur within area	In buffer area only
Darwinia foetida Muchea Bell [83190]	Critically Endangered	Species or species habitat may occur within area	In buffer area only
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Diuris purdiei Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea elastica Glossy-leafed Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat likely to occur within area	In feature area
Drakaea micrantha Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Eleocharis keigheryi Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat may occur within area	In feature area
Eucalyptus argutifolia Yanchep Mallee, Wabling Hill Mallee [24263]	Vulnerable	Species or species habitat known to occur within area	In feature area
Grevillea christineae Christine's Grevillea [64520]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Grevillea curviloba subsp. curviloba Curved-leaf Grevillea [64908]	Endangered	Species or species habitat known to occur within area	In buffer area only
Grevillea curviloba subsp. incurva Narrow curved-leaf Grevillea [64909]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Macarthuria keigheryi Keighery's Macarthuria [64930]	Endangered	Species or species habitat may occur within area	In feature area
Marianthus paralius [83925]	Endangered	Species or species habitat known to occur within area	In buffer area only
Synaphea sp. Fairbridge Farm (D.Papenfus 696) Selena's Synaphea [82881]	Critically Endangered	Species or species habitat likely to occur within area	In buffer area only
Thelymitra dedmaniarum Cinnamon Sun Orchid [65105]	Endangered	Species or species habitat may occur within area	In buffer area only
Trithuria occidentalis Swan Hydatella [42224]	Endangered	Species or species habitat likely to occur within area	In buffer area only
REPTILE			
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only

Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
SHARK			
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Sphyrna lewini Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat likely to occur within area	In buffer area only

Listed Migratory Species		[Resource Information	
Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area	In buffer area only
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area

Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Ardenna grisea Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Hydroprogne caspia Caspian Tern [808]		Foraging, feeding or related behaviour known to occur within area	In buffer area only
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Onychoprion anaethetus Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area	In buffer area only

Sterna dougallii Roseate Tern [817]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Sternula albifrons Little Tern [82849]		Species or species habitat may occur within area	In buffer area only
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Migratory Marine Species			
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area	In buffer area only
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Caperea marginata Pygmy Right Whale [39]		Species or species habitat may occur within area	In buffer area only
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area	In buffer area only

Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding known to occur within area	In buffer area only
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area	In buffer area only
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area	In buffer area only
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat may occur within area	In buffer area only
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat may occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area	In buffer area only

Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area	In feature area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Migratory Terrestrial Species			
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area	In feature area
Migratory Wetlands Species			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area	In feature area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area	In feature area
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area

Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area	In buffer area only
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur within area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due t the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State	Buffer Status
Unknown		
Commonwealth Land - [50705]	WA	In buffer area only

Listed Marine Species			[Resource Information
Scientific Name	Threatened Category	Presence Text	Buffer Status
Bird			
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area	In feature area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area	In buffer area only
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area	In feature area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area	In buffer area only

Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area	In feature area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area	In feature area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat likely to occur within area overfly marine area	In feature area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area overfly marine area	In feature area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area overfly marine area	In feature area
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area overfly marine area	In feature area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat known to occur within area overfly marine area	In feature area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only

Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area	In feature area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Species or species habitat known to occur within area overfly marine area	In feature area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Foraging, feeding or related behaviour known to occur within area	In buffer area only
Larus pacificus Pacific Gull [811]		Foraging, feeding or related behaviour may occur within area	In buffer area only
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area	In buffer area only
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area	In feature area

Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area	In feature area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Pachyptila turtur Fairy Prion [1066]		Species or species habitat likely to occur within area	In buffer area only
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area	In feature area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area	In buffer area only
Recurvirostra novaehollandiae Red-necked Avocet [871]		Species or species habitat known to occur within area overfly marine area	In feature area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area	In feature area
Sterna dougallii Roseate Tern [817]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only

Sternula albifrons as Sterna albifrons Little Tern [82849]		Species or species habitat may occur within area	In buffer area only
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area	In buffer area only
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat may occur within area overfly marine area	In feature area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur within area overfly marine area	In feature area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area overfly marine area	In feature area
Fish			
Acentronura australe Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area	In buffer area only

Campichthys galei Gale's Pipefish [66191]	Species or species habitat may occur within area	In buffer area only
Choeroichthys suillus Pig-snouted Pipefish [66198]	Species or species habitat may occur within area	In buffer area only
Halicampus brocki Brock's Pipefish [66219]	Species or species habitat may occur within area	In buffer area only
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]	Species or species habitat may occur within area	In buffer area only
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]	Species or species habitat may occur within area	In buffer area only
Hippocampus subelongatus West Australian Seahorse [66722]	Species or species habitat may occur within area	In buffer area only
Lissocampus fatiloquus Prophet's Pipefish [66250]	Species or species habitat may occur within area	In buffer area only
Maroubra perserrata Sawtooth Pipefish [66252]	Species or species habitat may occur within area	In buffer area only
Mitotichthys meraculus Western Crested Pipefish [66259]	Species or species habitat may occur within area	In buffer area only
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]	Species or species habitat may occur within area	In buffer area only
Phycodurus eques Leafy Seadragon [66267]	Species or species habitat may occur within area	In buffer area only

Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area	In buffer area only
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area	In buffer area only
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area	In buffer area only
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area	In buffer area only
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area	In buffer area only
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area	In buffer area only
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area	In buffer area only
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area	In buffer area only
Mammal			
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat may occur within area	In buffer area only
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Reptile			
Aipysurus pooleorum Shark Bay Sea Snake [66061]		Species or species habitat may occur within area	In buffer area only

Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area	In buffer area only
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area	In buffer area only
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area	In buffer area only
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area	In buffer area only
Natator depressus Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only

Whales and Other Cetaceans		[Resource Information	
Current Scientific Name	Status	Type of Presence	Buffer Status
Mammal			
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area	In buffer area only
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area	In buffer area only
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In buffer area only
Caperea marginata Pygmy Right Whale [39]		Species or species habitat may occur within area	In buffer area only

Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area	In buffer area only
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area	In buffer area only
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area	In buffer area only
Megaptera novaeangliae Humpback Whale [38]		Species or species habitat known to occur within area	In buffer area only
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area	In buffer area only
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area	In buffer area only
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area	In buffer area only
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area	In buffer area only

Road realignment and widening	2009/4926	Not Controlled Action (Particular Manner)	Post-Approval	In buffer area only
South West Metropolitan Railway Project	2003/1175	Not Controlled Action (Particular Manner)	Post-Approval	In buffer area only
Subdivision Lot 4 Flynn Drive and earthworks for industrial development, 240 Fl	2009/5028	Not Controlled Action (Particular Manner)	Post-Approval	In buffer area only
Referral decision				
Boundary Road Sand Quarry	2019/8560	Referral Decision	Completed	In buffer area only

Biologically Important Areas			[Resource Information
Scientific Name	Behaviour	Presence	Buffer Status
Seabirds			
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging (in high numbers)	Known to occur	In buffer area only
Hydroprogne caspia Caspian Tern [808]	Foraging (provisioning young)	Known to occur	In buffer area only
Larus pacificus Pacific Gull [811]	Foraging (in high numbers)	Former Range	In buffer area only
Onychoprion anaethetus Bridled Tern [82845]	Foraging (in high numbers)	Known to occur	In buffer area only
Puffinus assimilis tunneyi Little Shearwater [59363]	Foraging (in high numbers)	Known to occur	In buffer area only

Sterna dougallii			
Roseate Tern [817]	Foraging	Known to occur	In buffer area only
Sternula nereis			
Fairy Tern [82949]	Foraging (in high numbers)	Known to occur	In buffer area only
Seals			
Neophoca cinerea			
Australian Sea Lion [22]	Foraging (male)	Likely to occur	In buffer area only
Whales			
Megaptera novaeangliae			
Humpback Whale [38]	Migration (north and south)	Known to occur	In buffer area only

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referra of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine tl existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the repor or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known an if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together wi point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets t rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

83	Magnoliopsida	Stylidiaceae R.Br.	Stylidium striatum Lindl. *(Fan-leaved Triggerplant)*	native	P4
84	Magnoliopsida	Stylidiaceae R.Br.	Stylidium trudgenii Lowrie & Kenneally	native	P3
85	Magnoliopsida	Thymelaeaceae Juss.	Pimelea argentea R.Br. *(Silvery Leaved Pimelea)*	native	
86	Magnoliopsida	Thymelaeaceae Juss.	Pimelea calcicola Rye *(Coastal Banjine)*	native	P3
87	Magnoliopsida	Thymelaeaceae Juss.	Pimelea floribunda Meisn.	native	
88	Magnoliopsida	Thymelaeaceae Juss.	Pimelea leucantha Diels	native	

90	Magnoliopsida	Verbenaceae J.St.-Hil.	Phyla nodiflora (L.) Greene var. nodiflora	alien	
91	Magnoliopsida	Violaceae Batsch	Pigea calycina DC.	native	
92	Pinopsida	Cupressaceae Gray	Callitris preissii Miq. *(Rottnest Island Pine)*	mixed	
93	Pteridopsida	Dennstaedtiaceae Lotsy	Pteridium esculentum (G.Forst.) Cockayne subsp. esculentum	native	
94	Ulvophyceae K.R.Mattox & K.D.Stewart	Caulerpaceae KÃ¼tz.	Caulerpa flexilis J.V.Lamour.	native	
95	Ulvophyceae K.R.Mattox & K.D.Stewart	Caulerpaceae KÃ¼tz.	Caulerpa obscura Sond.	native	

hreatened species

- CR – Critically Endangered
- EN – Endangered
- VU – Vulnerable
- EX – Extinct
- EW – Extinct in the Wild
- CD – Species of special conservation interest (conservation dependent)
- OS – Species otherwise in need of special protection (other specially protected)
- MI – Migratory
- SP – Specially protected species

riority species

- P1 – Priority 1: Poorly-known species – known from few locations, none on conservation lands
- P2 – Priority 2: Poorly-known species – known from few locations, some on conservation lands
- P3 – Priority 3: Poorly-known species – known from several locations
- P4 – Priority 4: Rare, Near Threatened and other species in need of monitoring

andjoo specific codes

- Parent of conservation listed taxa
- Cons code inherited from parent, X

64	Mammalia	Macropodidae	Notamacropus eugenii derbianus J.E. Gray, 1837	native	P4
65	Mammalia	Macropodidae	Notamacropus irma (Jourdan, 1837)	native	P4
66	Mammalia	Muridae	Hydromys chrysogaster Geoffroy, 1804 *(Water-rat)*	native	P4
67	Mammalia	Muridae	Mus musculus	alien	
68	Mammalia	Muridae	Pseudomys delicatulus	native	
69	Mammalia	Muridae	Pseudomys desertor Troughton, 1932	native	
70	Mammalia	Muridae	Pseudomys shortridgei (Thomas, 1907) *(Heath Mouse)*	native	VU
71	Mammalia	Muridae	Rattus fuscipes (Waterhouse, 1839) *(Western Bush Rat)*	native	

74	Mammalia	Otariidae	Arctocephalus tropicalis (Gray, 1872)	native	VU
75	Mammalia	Otariidae	Neophoca cinerea (Peron, 1816)	native	EN
76	Mammalia	Peramelidae	Isoodon fusciventer (Gray, 1841)	native	P4
77	Mammalia	Peramelidae	Isoodon obesulus (Shaw, 1797)	native	
78	Mammalia	Phalangeridae	Trichosurus vulpecula (Kerr, 1793)	native	
79	Mammalia	Phalangeridae	Trichosurus vulpecula hypoleucus (Wagner, 1855)	native	
80	Mammalia	Phocidae	Mirounga leonina (Linnaeus, 1758)	native	VU
81	Mammalia	Physeteridae	Physeter macrocephalus Linnaeus, 1758 *(Sperm Whale)*	native	VU
82	Mammalia	Potoroidae	Bettongia penicillata ogilbyi (Waterhouse, 1841)	native	CR
83	Mammalia	Pseudocheiridae	Pseudocheirus occidentalis (Thomas, 1888) *(ngwayir, Western Ringtail Possum)*	native	CR
84	Mammalia	Tachyglossidae	Tachyglossus aculeatus (Shaw, 1792)	native	
85	Mammalia	Tarsipedidae	Tarsipes rostratus Gervais & Verraux, 1842	native	
86	Mammalia	Vespertilionidae	Chalinolobus gouldii (Gray, 1841) *(Gould's Wattled Bat)*	native	
87	Reptilia	Agamidae	Ctenophorus adelaidensis (Gray, 1841) *(Southern Heath Dragon)*	native	
88	Reptilia	Agamidae	Ctenophorus caudicinctus (GÃ¼nther, 1875)	native	
89	Reptilia	Agamidae	Diporiphora valens Storr, 1979	native	
90	Reptilia	Agamidae	Moloch horridus Gray, 1841 *(Thorny Devil)*	native	
91	Reptilia	Agamidae	Pogona minor (Sternfeld, 1919)	native	
92	Reptilia	Agamidae	Pogona minor minor (Sternfeld, 1919) *(Western Bearded Dragon)*	native	
93	Reptilia	Chelidae	Chelodina oblonga Gray, 1841	native	
94	Reptilia	Chelidae	Pseudemydura umbrina Siebenrock, 1901 *(Western Swamp Tortoise)*	native	CR
95	Reptilia	Cheloniidae	Caretta caretta Linnaeus, 1758 *(Loggerhead Turtle)*	native	EN
96	Reptilia	Cheloniidae	Chelonia mydas (Linnaeus, 1758) *(Green Turtle)*	native	VU
97	Reptilia	Cheloniidae	Natator depressus (Garman, 1880) *(Flatback Turtle)*	native	VU
98	Reptilia	Dermochelyidae	Dermochelys coriacea (Vandelli, 1761) *(Leatherback Turtle)*	native	VU
99	Reptilia	Diplodactylidae	Crenadactylus ocellatus (Gray, 1845) *(South-western clawless gecko)*	native	
00	Reptilia	Diplodactylidae	Diplodactylus granariensis granariensis Storr, 1979 *(Western stone gecko)*	native	
01	Reptilia	Diplodactylidae	Diplodactylus polyophthalmus GÃ¼nther, 1867 *(Spotted Sandplain Gecko)*	native	
02	Reptilia	Diplodactylidae	Diplodactylus savagei Kluge, 1963	native	
03	Reptilia	Diplodactylidae	Lucasium stenodactylus (Boulenger, 1896)	native	
04	Reptilia	Diplodactylidae	Lucasium wombeyi (Storr, 1978)	native	
05	Reptilia	Diplodactylidae	Rhynchoedura ornata GÃ¼nther, 1867	native	
06	Reptilia	Diplodactylidae	Strophurus michaelseni (Werner, 1910) *(Robust striped gecko)*	native	
07	Reptilia	Diplodactylidae	Strophurus spinigerus (Gray, 1842)	native	
08	Reptilia	Diplodactylidae	Strophurus spinigerus spinigerus (Gray, 1842) *(Soft spiny-tailed gecko)*	native	
09	Reptilia	Elapidae	Brachyurophis fasciolatus fasciolatus (GÃ¼nther, 1872) *(Narrow-banded Shovel-nosed Snake)*	native	
10	Reptilia	Elapidae	Brachyurophis semifasciatus (GÃ¼nther, 1863) *(Southern Shovel-nosed Snake)*	native	
11	Reptilia	Elapidae	Demansia reticulata (Gray, 1842) *(Reticulated Whipsnake)*		
12	Reptilia	Elapidae	Echiopsis curta (Schlegel, 1837) *(Bardick)*	native	
13	Reptilia	Elapidae	Hydrophis platurus platurus (Linnaeus, 1766) *(Yellow-bellied Seasnake)*	native	
14	Reptilia	Elapidae	Narophis bimaculatus (A.M.C. DumÃ©ril, Bibron & A. DumÃ©ril, 1854) *(Black-naped Burrowing Snake)*		
15	Reptilia	Elapidae	Neelaps calonotos (A.M.C. DumÃ©ril, Bibron & A. DumÃ©ril, 1854)	native	P3
16	Reptilia	Elapidae	Notechis scutatus (Peters, 1861)	native	
17	Reptilia	Elapidae	Pseudonaja affinis Gunther, 1872	native	
18	Reptilia	Elapidae	Pseudonaja affinis affinis GÃ¼nther, 1872	native	
19	Reptilia	Elapidae	Simoselaps bertholdi (Jan, 1859)	native	
20	Reptilia	Elapidae	Suta gouldii (Gray, 1841) *(Gould's Hooded Snake)*		

23	Reptilia	Gekkonidae	Gehyra variegata (DumÃ©ril & Bibron, 1836)	native	
24	Reptilia	Gekkonidae	Heteronotia binoei	native	
25	Reptilia	Gekkonidae	Underwoodisaurus milii Bory de Saint-Vincent, 1825 *(Southern Barking Gecko)*	native	
26	Reptilia	Pygopodidae	Aprasia repens (Fry, 1914)	native	
27	Reptilia	Pygopodidae	Delma fraseri Gray, 1831 *(Fraser's Delma, Fraser's Legless Lizard)*	native	
28	Reptilia	Pygopodidae	Delma grayii Smith, 1849 *(Side-barred Delma)*	native	
29	Reptilia	Pygopodidae	Delma pax Kluge, 1974	native	
30	Reptilia	Pygopodidae	Lialis burtonis Gray, 1835	native	
31	Reptilia	Pygopodidae	Pletholax gracilis Cope, 1864 *(West Coast Keeled Legless Gecko)*	native	
32	Reptilia	Pygopodidae	Pygopus lepidopodus (LacÃ©pÃ¨de, 1804) *(Common Scaly Foot)*	native	
33	Reptilia	Pythonidae	Morelia spilota imbricata (Smith, 1981) *(Carpet Python, Western Australian Carpet Python)*	native	
34	Reptilia	Scincidae	Acritoscincus trilineatus (Gray, 1839)	native	
35	Reptilia	Scincidae	Carlia munda	native	
36	Reptilia	Scincidae	Cryptoblepharus buchananii (Gray, 1838)	native	
37	Reptilia	Scincidae	Cryptoblepharus plagiocephalus	native	
38	Reptilia	Scincidae	Ctenotus australis (Gray, 1838)	native	
39	Reptilia	Scincidae	Ctenotus fallens Storr, 1974	native	
40	Reptilia	Scincidae	Ctenotus gemmula (Swan Coastal Plain subpopulation) Storr, 1974 *(Jewelled South-west Ctenotus (Swan Coastal Plain pop P3), skink)*	native	P3
41	Reptilia	Scincidae	Ctenotus gemmula Storr, 1974 *(Jewelled South-west Ctenotus (Swan Coastal Plain subpop P3))*	native	Parent of conservation listed taxa
42	Reptilia	Scincidae	Ctenotus impar Storr, 1969 *(South-western Odd-striped Ctenotus)*	native	
43	Reptilia	Scincidae	Ctenotus saxatilis Storr, 1970	native	
44	Reptilia	Scincidae	Cyclodomorphus celatus Shea & Miller, 1995	native	
45	Reptilia	Scincidae	Egernia napoleonis (Gray, 1838) *(South-western Crevice-skink)*	native	
46	Reptilia	Scincidae	Hemiergis peronii (Fitzinger, 1826)	native	
47	Reptilia	Scincidae	Hemiergis quadrilineata (Dumeril & Bibron, 1839)	native	
48	Reptilia	Scincidae	Hemiergis quadrilineatus (Dumeril, Shaw & Bibron, 1839)	native	
49	Reptilia	Scincidae	Lerista elegans (Gray, 1845)	native	
50	Reptilia	Scincidae	Lerista jacksoni Smith & Adams, 2007	native	
51	Reptilia	Scincidae	Lerista lineopunctulata (Dumeril & Bibron, 1839) *(Line-spotted Robust Slider)*	native	
52	Reptilia	Scincidae	Lerista praepedita (Boulenger, 1987)	native	
53	Reptilia	Scincidae	Menetia greyii Gray, 1845	native	
54	Reptilia	Scincidae	Morethia lineoocellata (Dumeril & Bibron, 1839) *(West Coast Morethia Skink)*	native	
55	Reptilia	Scincidae	Morethia obscura (Storr, 1973)	native	
56	Reptilia	Scincidae	Morethia ruficauda	native	
57	Reptilia	Scincidae	Notoscincus ornatus	native	
58	Reptilia	Scincidae	Tiliqua occipitalis (Peters, 1863) *(Western Blue-tongue Skink)*	native	
59	Reptilia	Scincidae	Tiliqua rugosa (Gray, 1825)	native	
60	Reptilia	Scincidae	Tiliqua rugosa rugosa (Gray, 1825)	native	
61	Reptilia	Typhlopidae Merrem, 1820	Anilios australis Gray, 1845	native	
62	Reptilia	Typhlopidae Merrem, 1820	Anilios hamatus (Storr, 1981)	native	
63	Reptilia	Typhlopidae Merrem, 1820	Anilios pinguis (Waite, 1897) *(Rotund Blind Snake)*	native	P2
64	Reptilia	Typhlopidae Merrem, 1820	Anilios waitii (Boulenger, 1895) *(Beaked Blind Snake)*	native	
65	Reptilia	Varanidae	Varanus gouldii (Gray, 1838)	native	
66	Reptilia	Varanidae	Varanus rosenbergi Mertens, 1957 *(Heath Goanna, Heath Monitor)*	native	
67	Reptilia	Varanidae	Varanus tristis (Schlegel, 1839) *(Black-headed Monitor)*	native	

hreatened species

- CR – Critically Endangered
- EN – Endangered
- VU – Vulnerable
- EX – Extinct
- EW – Extinct in the Wild
- CD – Species of special conservation interest (conservation dependent)
- OS – Species otherwise in need of special protection (other specially protected)
- MI – Migratory
- SP – Specially protected species

riority species

- P1 – Priority 1: Poorly-known species – known from few locations, none on conservation lands
- P2 – Priority 2: Poorly-known species – known from few locations, some on conservation lands
- P3 – Priority 3: Poorly-known species – known from several locations
- P4 – Priority 4: Rare, Near Threatened and other species in need of monitoring

andjoo specific codes

- Parent of conservation listed taxa
- Cons code inherited from parent, X

Table 29: Fauna inventory

Species	Common name	EPBC Act status	Western Australian status
Mammals			
Isoodon fusciventer	Southern Brown Bandicoot (Quenda)		Priority 4
Macropus fuliginosus	Western Grey Kangaroo		
*Oryctolagus cuniculus**	Rabbit		
Rodentia sp.	Rodent		
*Vulpes vulpes**	Red Fox		
Birds			
Anthochaera carunculata	Red Wattlebird		
Anthochaera lunulata	Western Little Wattlebird		
Barnardius zonarius	Australian Ringneck		
Cacatua sanguinea	Little Corella		
Calyptorhynchus banksii subsp. naso	Forest Red-tailed Black-Cockatoo	Vulnerable	Vulnerable
Colluricincla harmonica	Grey Shrike-thrush		
Coracina novaehollandiae	Black-faced Cuckoo-shrike		
Corvus coronoides	Australian Raven		
Cracticus tibicen	Australian Magpie		
*Dacelo novaeguineae**	Laughing Kookaburra		
Gerygone fusca	Western Gerygone		
Lichmera indistincta	Brown Honeyeater		
Merops ornatus	Rainbow Bee-eater	MA	
Ocyphaps lophotes	Crested Pigeon		
Petrochelidon nigricans	Tree Martin		
Phaps chalcoptera	Common Bronzewing		
Phylidonyris nigra	White-cheeked Honeyeater		
Phylidonyris novaehollandiae	New Holland Honeyeater		
Podargus strigoides	Tawny Frogmouth		
Purpureicephalus spurius	Red-capped Parrot		
Rhipidura albiscapa	Grey Fantail		
Rhipidura leucophrys	Willie Wagtail		
Smicrornis brevirostris	Weebill		
*Spilopelia chinensis**	Spotted Turtle-Dove		
*Spilopelia senegalensis **	Laughing Turtle-Dove		
Threskiornis spinicollis	Straw-necked Ibis		
*Trichoglossus moluccanus**	Rainbow Lorikeet		
Zanda latirostris	Carnaby's Cockatoo	Endangered	Endangered
Zosterops lateralis	Grey-breasted White-eye		
Reptiles			
Cryptoblepharus buchananii	Buchanan's snake-eyed skink		
Varanus sp.	Monitor lizard

* Significance:
1 = Very high value: large tree with obvious large vertical hollow above 5 m (height above ground) with future potential to create more hollows, ideal for Black Cockatoos
2 = High value: large/medium (often healthy) tree with suitable vertical or near vertical hollow with potential to create future hollows
3 = Moderate/low value: outer diameter of hollow at least 10 cm, height from ground at least 3 m, often in smaller trees or stags with limited potential for future hollows.

Disclaimer:

This document has been prepared in good faith and is derived from information sources believed to be reliable and accurate at the time of publication. Nevertheless, it is distributed on the terms and understanding that the author is not liable for any error or omission in the information sources available or provided to us, or responsible for the outcomes of any actions taken based on the recommendations contained herein. It is also expected that our recommendations will be implemented in their entirety, and we cannot be held responsible for any consequences arising from partial or incorrect implementation of the recommendations provided.

This document has been prepared primarily to consider the layout of development and/or the appropriate building construction standards applicable to development, where relevant. The measures outlined are considered to be prudent minimum standards only based on the standards prescribed by the relevant authorities. The level of bushfire risk mitigation achieved will depend upon the actions of the landowner or occupiers of the land and is not the responsibility of the author. The relevant local government and fire authority (i.e. Department of Fire and Emergency Services or local bushfire brigade) should be approached for guidance on preparing for and responding to a bushfire.

Notwithstanding the precautions recommended in this document, it should always be remembered that bushfires burn under a wide range of conditions which can be unpredictable. An element of risk, no matter how small, will always remain. The objective of the Australian Standard AS 3959:2018 is to "prescribe particular construction details for buildings to reduce the risk of ignition from a bushfire" (Standards Australia 2018). Building to the standards outlined in AS 3959 does not guarantee a building will survive a bushfire or that lives will not be threatened by the effects of bushfire attack.

Executive Summary

Satterley Property Group (the proponent) is progressing a Local Structure Plan (LSP) over 37 land parcels within the City of Wanneroo, in an area also referred to as Precinct 3 of the *East Wanneroo District Structure Plan* (EWDSP). The collective land parcels (herein referred to as 'the site') extend over a 140-hectare (ha) area situated approximately 20 km north of the Perth Central Business District and immediately to the east of the existing Hocking residential subdivision area.

The proposed Precinct 3 LSP will guide future subdivision of the site for a mix of uses including residential, a local centre, a primary school, public open space (POS) and parkland reserve (for retained native vegetation) areas, and is generally in accordance with the overarching EWDSP.

A significant portion of the site is located within 'Area 2' (designated bushfire prone) on the state-wide *Map of Bush Fire Prone Areas* prepared by the Office of Bushfire Risk Management (OBRM 2024). The identification of the site within 'Area 2' necessitates a further assessment of the determined bushfire risk affecting the site in accordance with *Australian Standard 3959:2018 Construction of buildings in bushfire prone areas* (AS 3959), and the satisfactory compliance of the proposal with the policy measures described in *State Planning Policy 3.7 Bushfire* (SPP 3.7) (WAPC 2024b)and the *Planning for Bushfire Guidelines - For the implementation of State Planning Policy 3.7 Bushfire* (the Guidelines)(WAPC 2024a).

The purpose of this bushfire management plan (BMP) is to assess the bushfire hazards (risk), both within and near the site, and identify the 'management' strategies (risk treatments) required to ensure the future development of the land is consistent with the intent of SPP 3.7, which is:

> *"to implement effective, risk-based land use planning and development which in the first instance avoids the bushfire risk, but where unavoidable, manages and/or mitigates the risk to people, property and infrastructure to an acceptable level. The preservation of life and the management of bushfire impact are paramount."*

The proposed LSP is in accordance with the existing zoning and currently approved EWDSP for the site, with the proposed LSP to be assessed by the outcomes applicable to Bushfire Protection Criteria 5 in the Guidelines.

This BMP has followed the requirements of SPP 3.7 to identify bushfire risks and the bushfire protection measures that will make the land suitable for its intended purpose. A Bushfire Attack Level (BAL) assessment involving the classification of vegetation and the effective slope has been undertaken in accordance with AS 3959, extending 150 m from the site in accordance with the Guidelines.

The following bushfire hazards were identified as applicable to the site following development:

- **Forest (Class A) vegetation** has been identified externally to the site to the north, east, and south within the broader EWDSP area. Forest vegetation is also identified internally to the site in areas proposed for future parkland reserves, where existing remnant native vegetation is proposed for retention.

- **Woodland (Class B) vegetation** is present to the east within Nanovich Park, a horse trotting and training facility external to the site, with the vegetation adjacent to the park's interface with Benmuni Road. This area is also within the broader EWDSP area.
- **Grassland (Class G) vegetation** is identified externally to the east of the site within Nanovich Park as well as an external privately owned landholding to the north of Nanovich Park. These areas are also within the broader EWDSP area.

Existing classified vegetation within future subdivision and development areas within the site will be removed and converted to non-vegetated land and/or low threat vegetation. It is planned that the public open space (POS) in the site will be converted to low threat vegetation in accordance with Section 2.2.3.2 of AS 3959. An exception is the parkland reserve areas remaining in their existing conditions (forest).

All classified vegetation outside the site is assumed to remain in its existing condition and therefore pose a long-term bushfire risk to the site. The Shenton Road reserve to the south of the site has been assumed to be developed as part of this BMP due to likely future staging within the EWDSP. However, if at the time of subdivision, the road has not been constructed, the implementation of greater setbacks and a combination of perimeter roads and/or EAWs will be necessary to address siting and access considerations for the southern portion of the LSP.

Areas of land identified as low threat that are external to the site are assumed to continue to be managed in accordance with existing subdivision approvals and/or land management practices. Narrow nature strips associated with road reserves are considered a low threat without management, based on AS 3959.

Compliance Assessment

The bushfire protection criteria (BPC) provided in the Guidelines represent the risk treatment acceptable solutions applicable to achieving the intent and outcomes listed in SPP 3.7. The BPC are divided into five criteria with each having four elements aligning to an outcome. In this instance, the relevant criteria (category) are *Criteria 5: Structure plans and subdivision applications*. Compliance with each element (as a risk treatment) is required to demonstrate to the decision maker that the risk is within an acceptable level, either by compliance with the acceptable solution or by an outcome (alternate solution).

This BMP demonstrates that compliance with the acceptable solution at each element in BPC 5 can be achieved and is summarised below:

- **Location:** As the site has been identified as being within an 'Area 2' bushfire prone area under the state-wide *Map of Bush Fire Prone Areas* prepared by the Office of Bushfire Risk Management (OBRM 2024), an assessment against Element 1 is necessary. It is noted that while the site sits within the broader EWDSP area which was most recently assessed against bushfire consideration in 2018 and therefore SPP 3.7), this assessment was conducted at a high level and noted that the area subject to this LSP would require further consideration to satisfy Element 1. On this basis, and in accordance with the Guidelines, a Broader Landscape Assessment has been completed, with the site having a point score of 5 meaning it is Broader Landscape Type A and can satisfy the acceptable solution.

- **Element 2 Siting and design:** The BAL assessment conducted as part of the BMP indicates that all future habitable buildings within the proposed development can be sited to achieve BAL-29 or less. A number of the development cells have BAL-40 incursions as result of retained vegetation within the parkland reserves, however, the development cells are sufficiently sized to accommodate appropriately oriented lots at subdivision, allowing for in-lot setbacks to achieve BAL-29. Asset Protection Zones will be established for all lots through the management of residential lots, non-vegetated areas, and low-threat vegetation in the future subdivision design, including roadways and POS areas. It is noted that currently Shenton Road reserve to the south of the site is undeveloped, and until it is constructed will pose a temporary hazard to development within the site. The road reserve does result in BAL-FZ and BAL-40 extending into the site, but impacts can be managed through staging of development until the road is constructed (as proposed is the EWDSP). For the purposes of this BMP BALs have been shown with Shenton Road in a constructed state.
- **Element 3 Vehicular access:** The proposed Precinct 3 LSP offers multiple access and egress points that connect to the existing Benmuni Road to the east and Lenore Road to the west, as well as Nicholas Road and Elliot Road that occur within the site (and connect with Benmuni Road and Lenore Road). Currently, these roads provide access in multiple directions and will be supported by an interconnected road network proposed as part of the LSP. Egress to the south will also be available when Shenton Road is developed. As future development within the site may be staged, it will be essential to ensure that all occupiers and visitors have at least two vehicular access routes at all times during the short, medium, and long-term phases of development. If roads providing through traffic routes are not constructed before any given stage of subdivision within the site, temporary no-through roads with suitable turnaround areas will need to be provided, along with possible temporary emergency access ways.
- **Element 4 Water:** future development will be provided with a permanent and reticulated water supply to support onsite firefighting requirements and hydrants will be installed as per Water Corporation requirements.

The management/mitigation measures to be implemented through the proposed development of the site have been outlined as part of this BMP. If the current development layout changes at the future subdivision process, a revised BMP is likely to be required to support future subdivision applications. It may also be required where BAL-40 extends into lots, to demonstrate how the detailed lot layout has responded to BAL-40 incursion.

1 Introduction

1.1 Background

Satterley Property Group (the proponent) is progressing a local structure plan (LSP) over 37 land parcels within the City of Wanneroo, in an area also referred to as Precinct 3 under the approved *East Wanneroo District Structure Plan* (EWDSP). The LSP plan is provided in **Appendix A**, while the approved EWDSP is provided in **Appendix B**.

The land parcels, referred to as 'the site,' cover an area of 140 hectares (ha) within the locality of Wanneroo. The site is generally bounded by remnant vegetation, part of Bush Forever site 471, and rural residential development to the north; Benmuni Road, rural development, Nanovich Park, and Bush Forever site 327 to the east; the future Shenton Road alignment and rural residential development to the south; and Lenore Road and existing residential subdivision to the west. It is situated approximately 20 km north of the Perth Central Business District. The location of the site, cadastral boundaries, and lot numbers are shown in **Figure 1**.

The proposed Precinct 3 LSP will guide future subdivision of the site for a mix of uses including residential, a local centre, a primary school, public open space (POS) and parkland reserve (for retained native vegetation) areas, and is generally in accordance with the overarching EWDSP.

The site is largely located within 'Area 2' (designated bushfire prone) on the state-wide *Map of Bush Fire Prone Areas* prepared by the Office of Bushfire Risk Management (OBRM 2024) as shown in **Plate 1**. The identification of the site within 'Area 2' necessitates further assessment of the determined bushfire risk affecting the site in accordance with *Australian Standard 3959:2018 Construction of buildings in bushfire prone areas* (AS 3959) and the satisfactory compliance of the proposal with the policy measures described in *State Planning Policy 3.7 Bushfire* (SPP 3.7) (WAPC 2024b) and the *Planning for Bushfire Guidelines - For the implementation of State Planning Policy 3.7 Bushfire* (the Guidelines) (WAPC 2024a).

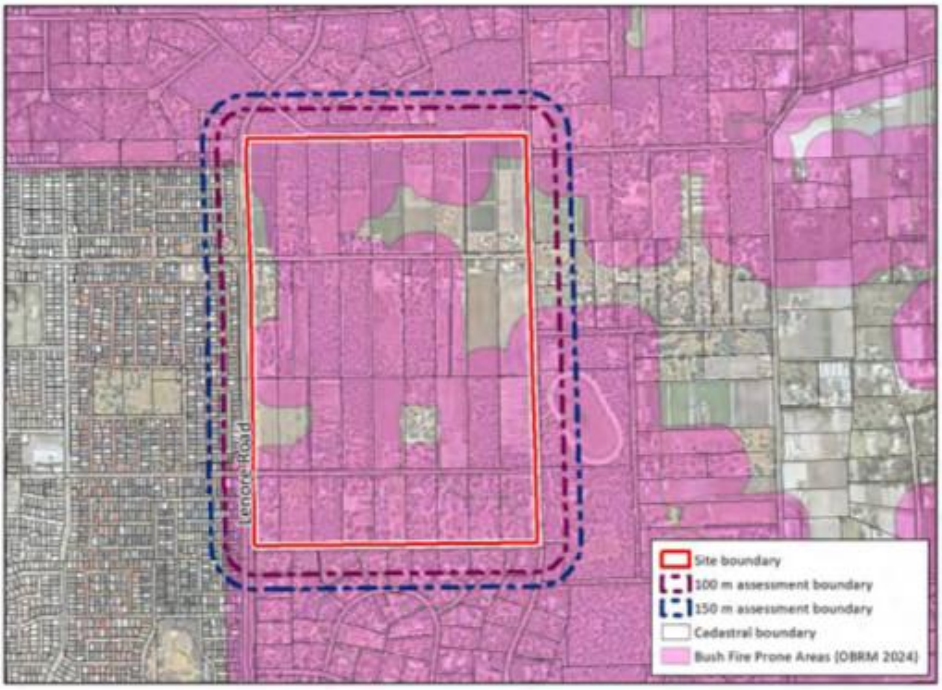

Plate 1: Areas within and surrounding the site, identified as Area 2 'designated bushfire prone' (under the state-wide Map of Bush Fire Prone Areas (OBRM 2024), is indicated in purple

1.2 Aim of this report

The purpose of this Bushfire Management Plan (BMP) is to assess bushfire hazards both within the site, and nearby, and demonstrate that the threat posed by any identified hazards can be appropriately mitigated and managed in future stages of development under the proposed LSP. This BMP has been prepared in accordance with SPP 3.7 (WAPC 2024b), the Guidelines (WAPC 2024a) and AS 3959 (Standards Australia 2018). The document includes:

- An assessment of the existing classified vegetation in the vicinity of the site (within 150 m) and consideration of bushfire hazards that will exist in the post-development scenario (**Section 3**).
- Commentary on how the future development can achieve *Bushfire Protection Criteria (BCP) 5: Structure Plans and subdivision applications* outlined within the Guidelines including an indication of Bushfire Attack Level (BAL) ratings likely to be applicable to development cells and future habitable buildings (**Section 5**).
- An outline of the roles and responsibilities associated with implementing this BMP (see **Section 6**).

1.3 Statutory policy and framework

The following key legislation, policies and guidelines are relevant to the preparation of a bushfire management plan:

- *Bush Fires Act 1954*
- *Fire and Emergency Services Act 1998*
- *Planning and Development Act 2005* and associated regulations
- *Building Act 2011* and associated regulations
- *State Planning Policy 3.7 Bushfire (WAPC 2024b)*
- *Planning for Bushfire Guidelines – For the implementation of State Planning Policy 3.7 Bushfire (WAPC 2024a)*
- *Australian Standard AS 3959 – 2018 Construction of buildings in bushfire prone areas* (Standards Australia 2018)

1.4 Description of the proposed development

The proposed Precinct 3 LSP (**Appendix A**) provides a framework for the provision of future land use, subdivisions and development within the site, consistent with the overarching EWDSP which covers an 8,300 ha area across East Wanneroo, comprising 28 separate structure plan precincts.

The EWDSP outlines the land use rationale for each precinct and specifies the information which is required to inform the preparation of the LSP for each precinct.

With respect to the site, the EWDSP (**Appendix B**) proposes a residential community integrated with natural features for Precinct 3. The proposed LSP (**Appendix A**) identifies the following land uses within the site:

- Approximately 64 ha of mixed density residential development;
- Approximately 12 ha for public open space (POS) and 14.25 ha of parkland reserves (areas of retained native vegetation);
- A primary school in the central portion of the site;
- A 2.1 ha local centre in the north-western portion of the site; and
- A 1.9 ha church site.

The site is predominantly zoned 'Urban Deferred' (including areas proposed for intensification of development), with portions of the proposed parkland reserves being zoned 'Rural' under the Metropolitan Region Scheme (MRS), and zoned 'Rural' under the City of Wanneroo *District Planning Scheme No. 2* (DPS No. 2). The MRS zones and reserves are shown in **Plate 2**.

Plate 2: Metropolitan Region Scheme Zoning and Reserves, in and surrounding the site.

1.5 Description of land characteristics

Based on observed site conditions and a review of publicly available historical aerial photography, it has been determined that large portions of the site have been cleared or disturbed by activities associated with market gardens and rural residential development. It is noted that a number of lots consist of regrowth or remnant native vegetation with Bush Forever site 471 being present in the north and Bush Forever site 327 in the southeast of the site.

The general locality surrounding the site is characterised by urban fringe qualities, with existing land uses including:

- Bush Forever site 471 and rural residential development to the north;
- Market gardens, Nanovich Park (horse trotting and training facility) and Bush Forever site 327 to the east;
- The future Shenton Road reserve and rural residential development to the south; and
- Lenore Road and residential development to the west.

The existing rural residential areas to the north, south and east of the site are part of the EWDSP and proposed for future urban and residential development.

The topography of the site is characterised as generally flat with portions of the site including undulating terrain, resulting from natural sand dunes. The site generally falls from the southwest to the northeast with the highest point within the southwest at 85 m Australian Height Datum (m AHD). From this high point, the land slopes down in all directions, with the lowest point being at 50 m AHD in the northeast, as illustrated in **Figure 1**. As part of development, the topographic contours will be modified, as part of cut and fill requirements across the site.

2 Environmental Considerations

In accordance with the *Bushfire Management Plan (BMP) Manual* (DPLH and WAPC 2024), this BMP has considered whether there are any environmental values that may require specific consideration through either protection, retention, or revegetation. To support this, a review of publicly available databases has been undertaken, with particular reference to the Shared Location Information Platform (SLIP) databases. A summary of the search results has been provided in **Table 1**.

Table 1: Summary of potential environmental considerations that may be associated with the site.

Key environmental feature (information in brackets refers to mapping data source)	Yes / no / potentially occurring within the site	If yes / potentially, describe the value that may be impacted
Conservation category wetlands and buffer (Geomorphic wetlands, Swan Coastal Plain (DBCA-019))	No	No conservation category wetlands (CCWs) or other geomorphic wetlands intersect the site.
RAMSAR wetlands (DBCA-010)	No	No RAMSAR wetlands are mapped as occurring within the site or in close proximity.
Threatened and priority flora (DBCA-036)	Yes	Existing remnant vegetation within the site varies in condition and could contain threatened and priority flora. Separate investigations are being progressed to understand the values associated with these areas and have informed the proposed areas for retention. Native vegetation within parkland reserve areas will be retained and will not be modified to support the requirements of this BMP. Existing firebreaks will be maintained and have been considered as part of the BMP. Areas proposed for retention are largely in accordance with the EWDSP.
Threatened and priority fauna (DBCA-037)	Yes	Existing remnant vegetation within the site varies in condition and will provide habitat for threatened and priority fauna species, including the federally and state protected black cockatoo species. Separate investigations are being progressed to understand the values associated with these areas and have informed the proposed areas for retention. Native vegetation within parkland reserve areas will be retained and will not be modified to support the requirements of this BMP. Existing firebreaks will be maintained and have been considered as part of the BMP. Areas proposed for retention are largely in accordance with the EWDSP.
Threatened ecological communities (DBCA-038)	Potentially	Investigations undertaken to support the EWDSP and this LSP indicate that areas of remnant native vegetation in the site contain the Banksia Woodlands of the Swan Coastal Plain threatened ecological community (TEC). Native vegetation within parkland reserve areas will be retained and will not be modified to support the requirements of this BMP. Existing firebreaks will be maintained and have been considered as part of the BMP. Areas proposed for retention are largely in accordance with the EWDSP.
Bush Forever areas (DPLH-019)	Yes	Two Bush Forever sites are present within the site and have been incorporated into the proposed parkland reserves. In the north of the site, Bush Forever site 471 is present, while site 327 is located in the southeast. Where these areas intersect with the site and remnant vegetation is present, they are proposed to remain vegetated and will not be modified to support the requirements of this BMP. Existing firebreaks will be maintained and have been considered as part of the BMP.

Table 1: Summary of potential environmental considerations that may be associated with the site. (continued)

Key environmental feature (information in brackets refers to mapping data source)	Yes / no / potentially occurring within the site	If yes / potentially, describe the value that may be impacted
Clearing regulations – Environmentally sensitive areas (DWER-046)	Yes	Where remnant vegetation is present as part of Bush Forever sites 471 and 327, it has been designated as an environmentally sensitive area (ESA). Where these areas intersect with the site and remnant vegetation is present, they are proposed to remain vegetated and will not be modified to support the requirements of this BMP. Existing firebreaks will be maintained and have been considered as part of the BMP.
Swan Bioplan Regionally Significant Natural Areas 2010 (DWER-070)	No	Not applicable. No Regionally Significant Natural Areas are identified within the site or nearby.

2.1 Native vegetation – modification and clearing

The majority of the site is currently cleared of native vegetation (covered by market gardens and rural residential development); however, several remnant or regrowth patches of native vegetation are present within the site. Portions of the existing remnant or regrowth native vegetation are proposed to be retained in parkland reserve areas in an unmanaged state. These are identified within the LSP (**Appendix A**). it is noted that the clearing proposed as part of this LSP are following the expectations established under the EWDSP

The retention of native vegetation in parkland reserves aligns with considerations detailed in the EWDSP as well as the proponent's aim to maximise vegetation retention within the LSP area due to the environmental and amenity benefits. Opportunities for tree retention outside the proposed parkland reserves exist within POS, road reserves, and future lot areas. However, these opportunities may be limited by requirements associated with implementing residential subdivision, such as cut and fill needs. Ultimately this will be considered during detailed design, with all landscaping (including vegetation retention) outside of the parkland reserves to be maintained (e.g., grass mown/slashed) to a low-threat standard in accordance with Section 2.2.3.2 of AS 3959. On this basis, the exact vegetation and/or trees selected for retention outside the proposed parkland reserves will be confirmed through future detailed landscape design processes.

Where clearing of native vegetation is undertaken in accordance with a subdivision approval under the *Planning and Development Act 2005*, it is exempt from requiring a clearing permit under Schedule 6 of the *Environmental Protection Act 1986* (EP Act). Additionally, a clearing permit will not be required where other exemptions pursuant to the EP Act or Environmental Protection (Clearing of Native Vegetation) Regulations 2004 (where outside an ESA) exist, such as those associated with Section 33 of the *Bush Fires Act 1954* or a building licence, respectively.

Vegetation to the south of the site within the future Shenton Road reserve has been assumed to be cleared and/or managed once future subdivision commences to allow for its construction in line with the expectations of the EWDSP. Although the exact timing has not been confirmed, it is assumed that by the time of subdivision, the road will have been constructed. If this has not occurred by the time of subdivision, a revised BAL assessment should be prepared to identify the bushfire hazard. All other vegetation outside the site has been assessed in its assumed mature state, post-development of the site.

2.2 Revegetation and landscape plans

It is possible that revegetation will occur but will be limited to the parkland reserve areas which are assumed to retain existing vegetation, and revegetation would not change the vegetation classification from a bushfire perspective.

POS areas within the site are intended to be utilised for recreation and drainage purposes. The detailed design of POS areas will be determined in collaboration with the City of Wanneroo as part of the standard development process and based on achieving the requirements of Liveable Neighbourhoods and community expectations for urban areas.

All POS areas will be designed to achieve low threat in accordance with Section 2.2.3.2 of AS 3959. Ongoing management is likely to include:

- Irrigation of grass and garden beds (where required).
- Regular removal of weeds and built-up dead material (such as fallen branches, leaf litter etc.)
- Low pruning of trees (branches below 2 m in height removed where appropriate).
- Application of ground/surface covers such as mulch or non-flammable materials as required.
- Regular mowing/slashing of grass to less than 100 mm in height.

The proponent will be responsible for the initial maintenance of the POS areas within the site and, following handover, the City of Wanneroo will be responsible for the ongoing long-term maintenance.

3 Bushfire Assessment Results

Bushfire risk for the site has been appropriately considered with regard to the potential impact upon the site using AS 3959 and the Guidelines.

The objective of AS 3959 is to reduce the risk of ignition and loss of a building to bushfire. It provides a consistent method for determining a radiant heat level (radiant heat flux) as a primary consideration of bushfire attack. AS 3959 measures the BAL as the radiant heat level (kW/m^2) over a distance of 100 m. AS 3959 also prescribes deemed-to-satisfy construction responses that can resist the determined radiant heat level at a given distance from the fire. It is based on six BAL ratings: BAL-LOW, BAL-12.5, BAL-19, BAL-29, BAL-40 and BAL-FZ.

A BAL contour plan has been prepared in accordance with Appendix A.3 of the Guidelines and Method 1 of AS 3959 to determine the BAL ratings likely to be applicable to future buildings. This has been based on the vegetation classifications and the effective slope under the vegetation (post-development scenario).

3.1 Assessment inputs

Vegetation classifications and effective slope have been detailed in **Table 2** and **Figure 2** (post-development) and a site assessment was completed on 21 January 2025.

3.1.1 Inputs and assumptions

The BAL assessment is based on the following inputs and assumptions:

- **Designated Fire Danger Index (FDI):** 80
- **Flame temperature:** 1090 K
- **Effective slope beneath classified vegetation:** flat/upslope, downslope 0-5 (see **Figure 2**)
- The site will be developed and managed to be largely clear of vegetation and excluded as non-vegetated in accordance with 2.2.3.2 (e) of AS 3959, or where landscaping (road verges, future residential gardens, POS) is present, this will be implemented and managed to achieve low threat in accordance with 2.2.3.2 (f) (unless otherwise stated).
- Areas designated for parkland reserve purposes have been assumed to retain existing native vegetation and remain unmanaged. These areas area assumed to maintain a forest classification.
- Areas of low threat vegetation outside the site will continue to be managed and/or considered to achieve low threat (in accordance with Section 2.2.3.2 of AS 3959) based on the completion of the subdivision process and/or the existing maintenance regimes.
- Classified vegetation in the Shenton Road reserve that directly interfaces with the proposed lots is assumed to be modified to a low threat or non-vegetated state at subdivision to align with the expectations set by the EWDSP
- Classified vegetation that has been identified outside of the proponent's landholdings has been assumed to remain in its current state (unless stated otherwise) and will therefore continue to be a bushfire hazard to development within the site.
- Areas of grassland can include up to 10% foliage cover from shrubs and trees, as per AS 3959.

3.1.2 Vegetation classification

All vegetation within 150 m of the site was classified in accordance with Section 2.2.3 of AS 3959. The assignment of vegetation classifications is based on an assessment of vegetation structure, including consideration of the various fuel layers of different vegetation types, as outlined in **Plate 3.** Each distinguishable vegetation plot is described in **Table 2** and shown in **Figure 2**.

Not all vegetation is classified as a bushfire risk. Vegetation and ground surfaces that are exempt from classification as a potential hazard are identified as a low threat under Section 2.2.3.2 of AS 3959. Low threat vegetation includes the following:

a. *Vegetation of any type that is more than 100 m from the site.*
b. *Single areas of vegetation less than 1 ha in area and not within 100 m of other areas of vegetation being classified.*
c. *Multiple areas of vegetation less than 0.25 ha in area and not within 20 m of the site, or each other or of other areas of vegetation being classified.*
d. *Strips of vegetation less than 20 m in width (measured perpendicular to the elevation exposed to the strip of vegetation) regardless of length and not within 20 m of the site or each other, or other areas of vegetation being classified.*
e. *Non-vegetated areas, that is, areas permanently cleared of vegetation, including waterways, exposed beaches, roads, footpaths, buildings, and rocky outcrops.*
f. *Vegetation regarded as low threat due to factors such as flammability, moisture content or fuel load. This includes grassland managed in a minimal fuel condition, mangroves, and other saline wetlands, maintained lawns, golf courses (such as playing areas and fairways), maintained public reserves and parklands, sporting fields, vineyards, orchards, banana plantations, market gardens (and other non-curing crops), cultivated gardens, commercial nurseries, nature strips and wind breaks.*

Plate 3: The five fuel layers in a forest environment that could be associated with fire behaviour (Gould et al. 2007)

*Table 2: AS 3959 vegetation classifications (refer to **Figure 2**)*

Photo ID:	1	**Plot:**	1
Vegetation classification or exclusion clause (and effective slope)			
Class A - Forest (Flat/upslope)			
Description / Justification for Classification			
Forest (Class A) vegetation has been identified to the south east of the site, on the eastern side of Benmuni Road associated with Bush Forever site 327. The area comprises tall mature trees 10 – 20 m in height with greater than 30% foliage cover over an understorey of shrubs and grasses. As this vegetation is external to the site and is part of Bush Forever site 327 it has been assumed to remain unmanaged in the long term.			

Photo ID:	2	**Plot:**	1
Vegetation classification or exclusion clause (and effective slope)			
Class A - Forest (Flat/upslope)			
Description / Justification for Classification			
Forest (Class A) vegetation has been identified to the south of the site in private lots on the southern side of the unconstructed Shenton Road reserve. The area comprises tall mature trees 10 – 15 m in height with greater than 30% foliage cover over an understorey of shrubs and grasses. This vegetation is within external landholdings not subject to the proposed LSP and as such has been assumed to remain unmanaged in the long term.			

Photo ID:	3	**Plot:**	1
Vegetation classification or exclusion clause (and effective slope)			
Class A - Forest (Flat/upslope)			
Description / Justification for Classification			
Forest (Class A) vegetation has been identified to the south (east portion) of the site, within private landholdings and in the unconstructed Shenton Road reserve. This area comprises tall, mature trees (10 - 15 m) with greater than 30% foliage cover over shrubs and grasses. Vegetation within the road alignment will be cleared for the construction of the road. Outside the road reserve, the vegetation is within private landholdings not subject to the proposed LSP and is assumed to remain unmanaged in the long term.			

*Table 2: AS 3959 vegetation classifications (refer to **Figure 2**)(continued)*

Non-vegetated areas have been identified along the north of the site associated with established firebreaks. Plot 5 has been excluded in accordance with Section 2.2.3.2(e) of AS 3959, however It is noted that the firebreak also contains portions of slashed (and well managed) grasses however for ease of reference have been shown as non-vegetated.			

3.2 Assessment outputs

The vegetation classifications determined in **Section 3.1** are summarised in **Table 3** and shown in **Figure 2** and incorporate the known changes to vegetation post-development within the site and the determined effective slope.

Table 3: AS 3959 vegetation classification and effective slope applicable to the site

Plot	Applied vegetation classification	Effective slope
1	Class A – Forest	Flat/upslope
2	Class A – Forest	Downslope 0 - 5
3	Class B – Woodland	Flat/upslope
4	Class G – Grassland	Flat/upslope
5	Exclusion 2.2.3.2(e)	Not applicable
6	Exclusion 2.2.3.2(f)	Not applicable

The resultant BAL ratings for the site are shown in **Figure 3**. The BAL ratings are based on the minimum distances outlined in Table 2.5 of AS 3959 for the applicable vegetation classifications and effective slope. The relevant setback distances for the BAL ratings from AS 3959 have been summarised for ease of reference in **Table 4**.

As outlined in **Section 1.5**, topography across the site varies and means that the effective slope applicable to future buildings will be dependent upon its location and staging of development when compared to retained vegetation. For this BMP the internal threats have been split to reflect the effective slope applicable to development in each direction, however it is anticipated that at more detailed subdivision phases, the effective slope assumptions will vary (e.g. more lots are likely to be subject to lesser slopes, or no downslope). The effective slope assumptions are therefore considered to be a conservative assessment.

The BAL assessment indicates that the majority of the site will be subject to BAL-LOW, except for areas within 50 m or 100 m of the external boundaries of the site or proposed parkland reserves. Where road interfaces do not meet the required setback to achieve BAL-29, the development cells will include BAL-40 incursions. These incursions, at most, would be 9 m. The provision of developable areas for habitable buildings can be addressed by appropriately orienting lots at the subdivision stage, and where required the minimum setbacks can be managed through in-lot setbacks (in addition to the road reserve) to ensure habitable buildings are located in BAL-29 or less.

In order to assist with the future design process, the minimum setback distances anticipated to be required to achieve a bushfire attack level (BAL) rating of BAL-29 have been provided in **Table 4**, to provide an understanding of the portion of future lots that may be subject to modification (e.g. an asset protection zone) and assist with the siting of habitable buildings (as part of subdivision).

Table 4: Setback distances based on vegetation classification and effective slope and Table 2.5 of AS 3959, as determined by the method 1 BAL assessment.

Plot number (see Figure 2)	Vegetation classification (see Figure 2)	Effective slope (see Figure 2)	Distance to vegetation (from Table 2.5 of AS 3959)	BAL rating
Plot 1	Forest (Class A)	Flat/upslope	< 16 m	BAL-FZ
			16 - < 21 m	BAL-40
			21 - < 31 m	BAL-29
			31 - < 42 m	BAL-19
			42 - < 100 m	BAL-12.5
			> 100 m	BAL-LOW
Plot 2	Forest (Class A)	Downslope 0 - 5	< 20 m	BAL-FZ
			20 - < 27 m	BAL-40
			27 - < 37 m	BAL-29
			37 - < 50 m	BAL-19
			50 - < 100 m	BAL-12.5
			> 100 m	BAL-LOW
Plot 3	Woodland (Class B)	Flat/upslope	< 10 m	BAL-FZ
			10 - < 14 m	BAL-40
			14 - < 20 m	BAL-29
			20 - < 29 m	BAL-19
			29 - < 100 m	BAL-12.5
			> 100 m	BAL-LOW
Plot 4	Grassland (Class G)	Flat/upslope	< 6 m	BAL-FZ
			6 - < 8 m	BAL-40
			8 - < 12 m	BAL-29
			12 - < 17 m	BAL-19
			17 - < 50 m	BAL-12.5
			> 50 m	BAL-LOW

4 Identification of Bushfire Hazard Issues

From a bushfire hazard management perspective, based on the requirements of SPP 3.7 and the Guidelines, the key issues that are likely to require management and/or consideration as part of future development within the site, particularly the creation of lots and subsequent construction of new habitable buildings, include:

- Provision of appropriate separation distance from bushfire hazards to ensure a BAL rating of BAL-29 or less can be achieved at buildings (built form) within subdivided lots. At structure planning, development cells should have sufficient area to accommodate future lots that can support areas subject to BAL-29.
- Ensuring that site access is designed, constructed and managed to enable safe access and egress for fire fighting vehicles and occupants. At the subdivision stage, staging of development will be a key consideration.
- Ensuring that site landscaping for POS areas is designed, implemented and managed to achieve low threat standards to reduce the risk of fires starting onsite were assumed to be low threat. Parkland reserves are assumed to remain in their existing condition (forest) and are not subject to management, apart from maintaining existing firebreaks.
- Ensuring that the provision of water for firefighting is sufficient and accessible by firefighting services.

4.1 Permanent hazards

The site is located adjacent to areas of classified vegetation to the north, east, south and northwest and is associated with various landholdings not under the control of the proponent, where timing for residential development in accordance with the EWDSP is unknown. In addition, parkland reserve areas within the site are designated for vegetation retention/ revegetation as part of implementing the proposed LSP and are therefore assumed to remain in the long term. Classified vegetation that will be applicable to the site on an ongoing basis includes:

- **Forest (Class A) vegetation** which has been identified to the north, east, and south external to the site within the broader EWDSP area and outside the Bush Forever sites is proposed for future redevelopment. This type of vegetation is also found internally to the site in areas proposed for future parkland reserves.
- **Woodland (Class B) vegetation** is present to the east within Nanovich Park, adjacent to the park's interface with Benmuni Road. This area is also within the broader EWDSP area and proposed for future redevelopment.
- **Grassland (Class G) vegetation** is identified to the east within Nanovich Park and an external privately owned landholding. These areas are also within the broader EWDSP area and are proposed for future redevelopment.

4.2 Temporary hazards

Areas to the east or south of the site (where not identified as Bush Forever sites) may be considered temporary hazards that will be modified as development progresses in line with the EWDSP, however as the timing and exact design of these areas has not been confirmed they have been assumed to remain in their existing condition in the long term.

Notwithstanding the above, this BMP has been prepared under the assumption that the future Shenton Road Reserve area to the south will be developed prior to subdivision commencing within the southern portions of the site. If, at the time of subdivision, this road is not or will not be delivered, a revised approach to development in this area will be required. This will need to consider increased bushfire threat from the south (re-siting of lots away from BAL-FZ or BAL-40) and the implementation of additional perimeter roads and/or EAWs to satisfy access requirements. This can be addressed at subdivision.

It is also noted that, as part of the staged development to implement the LSP, temporary hazards are likely to be present within the site. These hazards are largely associated with remnant/regrowth vegetation that has not been identified for retention within parkland reserves. To ensure the findings of this BMP remain relevant where a staged approach to subdivision is implemented, a suitable width area (up to 27 m to achieve BAL-29 for forest vegetation with an effective slope of downslope 0-5, and up to 100 m for BAL-LOW) can be managed around each development stage within the proponent's landholding as long as the vegetation is not proposed for retention. These hazards and their management will be addressed in future, more detailed stages of the planning process, such as subdivision.

4.3 Vulnerable land use

The definition of vulnerable land use as outlined in SPP 3.7 is a land use which "*is designed to accommodate people who are less physically or mentally able and likely to present evacuation challenges; and/or due to the building design or use, or the number of people accommodated, likely to present evacuation challenges; and or involves visitors who are unfamiliar with the surroundings*" (WAPC 2024b). This generally includes (but is not limited to) schools, hospitals, aged care facilities and similar.

A future primary school site is identified as part of the proposed LSP, within the central portion of the site, adjacent to the southern-most parkland reserve. The primary school site has been designed to ensure a suitable developable area is provided (greater than 5 ha) to locate habitable structures outside of BAL-FZ or BAL-40 areas, away from any significant future bushfire threats. It is noted that over half of the primary school site will be situated on land designated as BAL-LOW. The school is surrounded by a suitable road network providing access to multiple destinations, and therefore the LSP provides a framework to enable bushfire risk to be suitably managed at more detailed stages of design and development. The school will be subject to separate development applications that will address bushfire risk in detail.

5 Assessment Against the Bushfire Protection Criteria

5.1 Bushfire protection criteria

The bushfire protection criteria provided in the Guidelines represent the risk treatments applicable to achieving the intent and the objectives listed in SPP 3.7. The bushfire protection criteria vary depending upon the stage of the planning process and development type and are divided into four subsystems (elements). Each subsystem is provided with an outcome, or an acceptable solution method (predetermined solution). Compliance with each subsystem (as a risk treatment) is required to demonstrate to the decision maker that the risk is within acceptance.

The bushfire protection criteria identified in the Guidelines and addressed as part of this BMP are:

- Element 1: Location
- Element 2: Siting and design
- Element 3: Vehicular access
- Element 4: Water supply

Bushfire Protection Criteria 5 (BCP 5): Structure plans and subdivision applications have been considered for the proposed LSP. The assessment demonstrates that the LSP and future development phases can achieve the objectives of SPP 3.7 and the acceptable solutions in BCP 5; as identified in **Table 5**.

Table 5: Assessment against Bushfire Protection Criteria 5: Structure plans and subdivision applications

Bushfire protection criteria 5	Proposed bushfire management strategies
Element 1: Location	
A1.1a Broader Landscape Type	A landscape assessment, in accordance with Appendix A of the Guidelines, has been undertaken for the site and is outlined in **Table A1.1** below. This assessment shows the site is a Broader Landscape Type A and therefore satisfies BCP 5 A1.1a. The site directly abuts a current local distributor road (Lenore Road), offering direct access to the surrounding road network which can disburse people to the north, south and west, as shown in **Figure 4**. The extent of local distributors will increase as the EWDSP is implemented, with Elliot Road is the site proposed to be a local distributor. Access roads proposed within the site will provide a legible road network. The vegetation mapping presented in **Figure 4** is based on the native vegetation mapping prepared by DPIRD. ***Table A1.1**: Landscape assessment in accordance with Appendix A Table 3 of the Guidelines*

Criteria	Assessment	Points
Proximity of the planning proposal to a suitable destination	1-10km. By road, the subdivision directly to the east is within 1 km.	1
The road pattern from the planning proposal to a suitable destination	Simple and/or direct, as shown in **Figure 4**.	1
The predominant vegetation pattern	A mosaic pattern of vegetation, is shown in **Figure 4**. This is based on current conditions, noting development in accordance with the EWDSP will result in existing vegetation being modified and reduced in some areas.	2
Exposure of the planning proposal to an identified external bushfire hazard (excluding grassland)	One aspect (northeast) has a minor vegetation corridor (broken connection) that abuts the site and extends up to 2km in patches	1
Total points		**5**
Landscape type		**A**

	The proposal complies with **A1.1a**.
Element 2: Siting and design	
A2.1 Siting and design	All proposed development cells intended to support habitable buildings can accommodate lots that provide sufficient separation from classified vegetation to achieve developable areas of BAL-29 or below. The LSP ensures separation from permanent bushfire hazards (forest vegetation) through the strategic placement of public roads and managed POS areas (as shown in **Figure 5**). Additionally, development cells are of sufficient size to accommodate appropriately orientated lots at subdivision, allowing for in-lot setbacks sufficient to achieve BAL-29 where BAL-40 incursions occur (even with a road interface). Overall, the development cells within the site are suitably sized, in combination with the public road network, to meet the minimum separation distances outlined in **Table 4** and shown in **Figure 3**. The proposal can comply with **A2.1**.

Table 5: Assessment against Bushfire Protection Criteria 5: Structure plans and subdivision applications (continued)

Bushfire protection criteria 5	Proposed bushfire management strategies
Element 2: Siting and design (continued)	
A2.2 Asset Protection Zone (APZ)	Development cells have been suitably sized to accommodate lots large enough to provide for minimum separation distances to achieve BAL-29 or below. Future lots will be required to be managed to a low threat standard in accordance with Section 2.2.3.2(e) or (f) with a minimum Asset Protection Zone (APZ) equivalent to enable BAL-29 to be achieved at future habitable buildings. APZs are typically contained within a lot, but can also include areas of low threat vegetation managed in accordance with Section 2.2.3.2 of AS 3959. For the site, this includes managed road reserves, firebreaks and areas of POS. The proposal can comply with **A2.2**.
A2.3 Clearing of native vegetation	The majority of the site is currently cleared, with several remnant or regrowth patches of native vegetation present within the site. The proponent aims to maximise vegetation retention within the LSP area as part of addressing the requirements of the EWDSP and to protect environmental and amenity values. Large patches of remnant and regrowth vegetation have been proposed for retention within future parkland reserves, with no modification assumed for these areas as part of this BMP. Existing firebreaks will be maintained. Opportunities for vegetation and/or tree retention outside the proposed parkland reserves exist within POS, road reserves, and future lot areas. However, these opportunities may be limited by requirements associated with implementing residential subdivision, such as cut and fill needs. Ultimately this will be considered during detailed design, with all landscaping (including vegetation retention) outside of the parkland reserves to be maintained (e.g., grass mown/slashed) to a low-threat standard in accordance with Section 2.2.3.2 of AS 3959. On this basis, the retention of trees outside of the parkland reserves would not change the assumptions within this BMP. Ultimately, it is anticipated that as part of the future subdivision process, more detailed landscape design and identification of vegetation for retention will occur, however, would not significantly change the assumptions for bushfire risks detailed in this BMP. The proposal complies with **A2.3**.
Element 3: Vehicular access	
A3.1 Public roads	The existing public roads surrounding the site as well as the proposed public roads can satisfy the requirements of Appendix B.3 and Table 10 of the Guidelines (an excerpt is provided in **Plate 4** below). The requirements of Appendix B.3 Table 10 of the Guidelines will be referenced to inform subdivision and implementation. The proposal complies with **A3.2.**

Table 5: Assessment against Bushfire Protection Criteria 5: Structure plans and subdivision applications (continued)

Bushfire protection criteria 5	Proposed bushfire management strategies
Element 3: Vehicular access (continued)	
A3.2 Access routes	The LSP provides for an interconnected road network (see **Figure 5**) with multiple access and egress points to the existing public road network via Elliot Road and Nicholas Road within the site, Benmuni Road to the east and Lenore Road to the west, offering access in different directions. There is also provision for connections to the future Shenton Road alignment to the south of the site, which has been assumed to be constructed between the site and the rural residential development further south as part of the subdivision implementation inline with the expectations of the EWDSP. If, at the time of subdivision, Shenton Road is not or will not be delivered, a revised approach to development in this area will be required. This will need to consider the implementation of additional perimeter roads and/or EAWs to satisfy access requirements. This can be addressed at subdivision. The public road access outlined in the LSP can satisfy the acceptable solution. The proposal can comply with **A3.2.**
A3.3a No-through roads	Through road access is provided for the majority of the site via an internal interconnected road network, which connects at several points to Benmuni Road to the east, Lenore Road to the west, and the future Shenton Road alignment to the south. A no-through road will be present within the northwest corner of the site; however, this is a loop road, and no lot would be more than 200 m from a road connection that provides access in multiple directions. The public road network outlined in the LSP can satisfy the acceptable solution. As identified above, if at the time of subdivision, Shenton Road is not or will not be delivered, a revised approach to development in this area will be required. This will need to consider the implementation of additional perimeter roads and/or EAWs to satisfy access requirements. This can be addressed at subdivision. As future development within the site may be staged, consideration is to be given to ensure that all occupiers and visitors have at least two vehicular access routes during all phases of development and/or no through roads meet the requirements of the Guidelines. Therefore, as subdivisions are implemented, temporary no-through roads with suitable turnaround areas and temporary emergency access ways may be required to meet access requirements at all stages of development. The proposal complies with **A3.3a**.
A3.3b No-through road requirements	As outlined above, upon completion, the proposed road network will have one no-through road located in the northwest of the site. This no-through road has been designed to loop back on itself, so it does not require a turn-around area and can meet the minimum technical standards for a public road as detailed in Table 10, Column 2 of Appendix B.3 of the Guidelines (**Plate 4**). Additionally, as already outlined, it is noted that future development within the site may be staged, and temporary access arrangements regarding no-through roads may be applicable. Where relevant, temporary no-through roads should not exceed 200 m in length and be developed in accordance with A3.3b, meeting the minimum technical standards for a public road as detailed in Table 10, Column 2 of Appendix B.3 of the Guidelines (**Plate 4**), and the turn-around area/head standards outlined in Figure 30 of the Guidelines. Where the road length is exceeded, temporary emergency access ways may be required and should also comply with Table 10, Column 2 of Appendix B.3 of the Guidelines (**Plate 4**). The proposal complies with **A3.3b**

Table 5: Assessment against Bushfire Protection Criteria 5: Structure plans and subdivision applications (continued)

Bushfire protection criteria 5	Proposed bushfire management strategies
Element 3: Access (continued)	
A3.4 Emergency access way	Not applicable given the proposal is compliant with A3.2 and A3.3. As already identified, as part of staged development, temporary emergency access ways may be required to ensure access to two different destinations. Emergency access ways should comply with the requirements of Appendix B.3 Table 10 column 3 of the Guidelines (**Plate 4** below) or as agreed with the local government.
A3.5a Perimeter roads	A perimeter road is provided for all residential and commercial development areas where they abut identified or proposed forest, woodland or grassland vegetation. The primary school is provided with a POS interface where directly abutting a small or portion of a parkland reserve with forest vegetation. The proposal can comply with **A3.5a.**
A3.5b Fire service access route	No fire service access route is proposed or required to achieve compliance as the proposal complies with A3.5a based on implementing the subdivision. Therefore **A3.5b** is not applicable.
A3.6 Battle-axe access legs	No battle-axe legs are proposed and therefore **A3.6** is not applicable.
Element 4: Water	
A4.1 Water supply for structure plans	The LSP will be serviced by a reticulated water supply, which is already available within the site bounds which will be extended as part of future development. The proposal complies with **A4.1.**
A4.2 Water supply for subdivision applications	**A4.2** is not applicable to the structure planning stage.
A4.3 Water supply for existing habitable building(s)	Not applicable to the site. There are no existing habitable buildings proposed for retention within the site.

Table 10: Vehicular access technical requirements

	1		2		3		4		5	
TECHNICAL REQUIREMENTS	**PERIMETER ROADS**		**PUBLIC ROADS**		**EMERGENCY ACCESS WAY[2]**		**FIRE SERVICE ACCESS ROUTE[2]**		**BATTLE-AXE & PRIVATE DRIVEWAYS[1]**	
MAP OF BUSH FIRE PRONE AREAS DESIGNATION	**Area 2**	**Area 1**	**Area 2**	**Area 1**	**Area 2**	**Area 1**	**Area 2**	**Area 1**	**Area 2**	**Area 1**
Minimum horizontal clearance (metres)	12	8	See note 5		10	6	10	6	6	
Minimum vertical clearance (metres)	4.5									
Minimum weight capacity (tonnes)	15									
Maximum grade unsealed road[3]	See note 5		See note 5		(..10 (10% or 6°)					
Maximum grade sealed road[3,4]					1:7 (14.3% or 8°)					
Maximum average grade sealed road					(..10 (10% or 6°)					
Minimum inner radius of road curves (metres)					8.5					

Notes:

1. Driveways and battleaxe legs to comply with the Residential Design Codes and Development Control Policy 2.2 Residential Subdivision where not required to comply with the widths in this Appendix or the Guidelines.
2. Dips must have no more than a 1 in 8 (12.5%, 7.1 degrees) entry and exit angle.
3. To have crossfalls between 3 per cent and 6 per cent.
4. For sealed roads only the maximum grade of no more than 1 in 5 (20 per cent) (11.3 degrees) for no more than 50 metres is permissible, except for short constrictions to 3.5 metres for no more than 30 metres in length where an obstruction cannot be reasonably avoided or removed.
5. As outlined in the Institute of Public Works Engineering Australasia (IPWEA) subdivision guidelines, Liveable Neighbourhoods, Austroads Standards Main Roads standard, supplement, policy or guideline and/or any applicable or relevant local government standard or policy.

Plate 4: Excerpt of Table 10 from Appendix B.3 of The Guidelines outlining vehicle access requirements

5.2 Additional management strategies

5.2.1 Future approval considerations

A BAL assessment has been prepared for the site to demonstrate that best practice management strategies can be adopted through future planning and implementation stages to ameliorate the bushfire hazards (i.e., habitable buildings can be located in areas of BAL-29 or less) that would otherwise impact upon its future development.

It is likely a BMP, or as a minimum a bushfire statement, will be required to support future subdivision for the site, to detail how the proposed development layout has or will address the bushfire protection criteria based on the recommendations outlined within this BMP, as well as to determine the likely BAL ratings applicable to the future lots based on hazards applicable to that stage of development.

Where proposed to be constructed and within a designated bushfire prone area, future Class 1, 2, 3 and 10a buildings in an area subject to a BAL rating of BAL-12.5 or higher will need to satisfy higher construction standards in accordance with the National Construction Code (NCC).

5.2.2 Vegetation management

5.2.2.1 Within the site

All residential and local centre lots, once created, are required to be managed by the relevant landowner to a minimal fuel condition and achieve low threat as per Section 2.2.3.2 of AS 3959, in accordance with this BMP and the City of Wanneroo Firebreak Notice (as published).

Road reserves and areas of POS will be managed to achieve low threat in accordance with Section 2.2.3.2 of AS 3959 (and described in **Section 2.2** of this BMP) and will be the responsibility of the proponent initially, and following handover, will be the responsibility of the City of Wanneroo. Nature strips can be excluded as low threat and do not require specific management.

Parkland reserves are assumed to not be subject to ongoing management for bushfire purposes, except for the ongoing maintenance of existing firebreaks.

5.2.2.2 Surrounding the site

Where indicated as low threat in **Figure 2**, it is assumed that areas surrounding the site will be managed by the applicable landowners/land managers in accordance with existing maintenance regimes and where relevant the City of Wanneroo Firebreak Notice (as published). This assumption also applies to the categorisation of the adjacent road reserves.

Where indicated as classified vegetation in **Figure 2**, areas have been assumed to remain a bushfire hazard in the long-term.

5.2.3 City of Wanneroo Firebreaks Notice

The City of Wanneroo releases a Firebreaks Notice on an annual basis to provide a framework for bushfire management within the City. The City of Wanneroo is able to enforce this notice in accordance with Section 33 of the *Bush Fires Act 1954*. In addition, Section 33 1(b) also provides the City with additional power to direct landowners to undertake works to remedy conditions conducive to the outbreak or spread of bushfire.

Until subdivision is progressed within the site, the proponent will be required to comply with the Fire Control Notice, including the maintenance of a minimum 3 m-wide perimeter firebreaks (or as agreed with the City of Wanneroo).

All landowners of future lots will be required to comply with the Fire Control Notice as published, which for residential lots under 4000 m² is likely to include ensuring that the property is cleared of all flammable material, except for living standing trees, and ensuring that grass height is no longer than 50 mm. For all larger lots, inclusive of the parkland reserves, a 3 metre wide trafficable firebreak as close as possible to all external boundaries should be installed.

5.2.4 Public education and preparedness

Community bushfire safety is a shared responsibility between individuals, the community, government, and fire agencies. DFES has an extensive Community Bushfire Education Program including a range of publications, a website, and Bushfire Ready Groups. The DFES website (https://www.dfes.wa.gov.au/bushfire/prepare/) provides a range of materials to help the community prepare for and survive the bushfire season.

The City of Wanneroo provides bushfire safety advice to residents available from their website https://www.wanneroo.wa.gov.au/homepage/61/fire_information, qualified consultants also offer bushfire safety advice and relevant services to residents and businesses in high-risk areas in addition to that provided in this BMP.

In the case of a bushfire in the area, advice would be provided to residents by DFES, Department of Biodiversity Conservation and Attractions (DBCA) and/or the City of Wanneroo on any specific recommendations with regard to responding to the bushfire, including evacuation if required.

6 Responsibilities for Implementation and Management of Bushfire Measures

Table 6 outlines the future responsibilities of the proponent (developer) and the City of Wanneroo associated with implementing the proposed LSP with reference to future mitigation measures to be accommodated as part of subdivision.

Table 6: Responsibilities for the implementation of this BMP

Developer/landowner	
No.	**Implementation and Management actions**
1	Where applicable, as part of the subdivision should provide: • A suitable public road network that provides egress to at least two different destinations and meets the technical requirements of Appendix B.3 of the Guidelines (or as otherwise determined by a bushfire consultant and relevant approval authority). This includes the provision of perimeter roads, as identified in the LSP between residential and commercial lots and areas of retained vegetation. • Where possible, avoid no through roads and battle-axe lots as part of the spatial layout. If these are proposed as part of future development, these will need to be justified from a planning/development perspective and be consistent with the minimum requirements outlined in Appendix B.3 of the Guidelines (or as otherwise determined by a bushfire consultant and relevant approval authority). This includes the provision of suitable turn-around areas. • Ensure future habitable buildings are able to be located in an area subject to BAL-29 or less. The minimum separation distances between habitable buildings and classified vegetation to achieve BAL-29 should be in accordance with **Table 4** in this BMP or as specified in subsequent BAL assessments. These separation distances can be accommodated by locating public roads between the habitable building/s and classified vegetation, and/or the use of and in lot setbacks. Where in lot setbacks are required, lots will need to be deep enough to accommodate the required setback and a habitable building in BAL-29 or less. • Provide a water supply dedicated to firefighting purposes in the form of a reticulated network of water hydrants. Alternatively, in consultation with the City of Wanneroo this could also be addressed through a strategically located static water supply (i.e., water tank).
2	Following approval of the LSP, if required prepare a BMP or bushfire statement in accordance with SPP 3.7, the Guidelines and AS 3959 to support subdivision within portions of the site that are designated as bushfire prone areas under the *Map of Bush Fire Prone Areas*. The BMP should consider the proposed spatial layout of the development.

7 Applicant Declaration

7.1 Accreditation

This assessment has been prepared by Emerge Associates who have been providing bushfire risk management advice for more than 10 years, undertaking detailed bushfire assessments (and associated approvals) to support the land use development industry. Emerge Associates have a number of team members who have undertaken Bushfire Planning and Design (BPAD) Level 1 and Level 2 training and are Fire Protection Association of Australia (FPAA) accredited practitioners.

Anthony Rowe is a FPAA Level 3 BPAD accredited practitioner (BPAD No. 36690) in accordance with clause 9.10 of the Guidelines.

7.2 Declaration

I declare that the information provided is true and correct to the best of my knowledge.

Lot Siting

No habitable Lots should exceed BAL- 29 (determined in accordance with AS 3959).

Vehicle Access

+ All roads will meet the public road requirements as per Appendix B.3 of the Guidelines or as agreed with the City of Wanneroo.

+ Access to multiple destinations will be provided for each stage of development, unless otherwise agreed with the City of Wanneroo. This will be considered at the subdivision stage as part of a holistic or staged approach. Where required:

- Temporary emergency access ways can be used to facilitate access to multiple destinations if the road network is not fully constructed. These should meet the requirements of the Guidelines unless otherwise agreed.
- Temporary no through roads are to be provided with a suitable turning area and must satisfy the requirements of Appendix B.3 in the Guidelines.

Through Roads

The future development layout ensures that every lot has access to through routes for traffic. The structure plan demonstrates this with only two lots requiring access via a no-through road, which is less than 20 meters in length.

Access to Water

The area will be integrated with a reticulated water supply, ensuring a reliable and consistent source of water for firefighting purposes.

Table 2: Existing Traffic Volumes 8

1 Introduction

This Transport Impact Assessment has been prepared by Transcore on behalf of Satterley with regard to the Local Structure Plan (LSP) for East Wanneroo Precinct 3 in the City of Wanneroo.

The subject site is located approximately 2.5 kilometres southeast of the Wanneroo town centre and is bounded by Lenore Road to the west and Benmuni Road to the east, with Elliot Road and Nicholas Road running east west within the subject site.

The subject site is Precinct 3 of the *East Wanneroo District Structure Plan* (DSP), as shown in **Figure 1**.

This report assesses the traffic flows that will be generated by the land uses proposed in the LSP and the corresponding road network requirements within the LSP area.

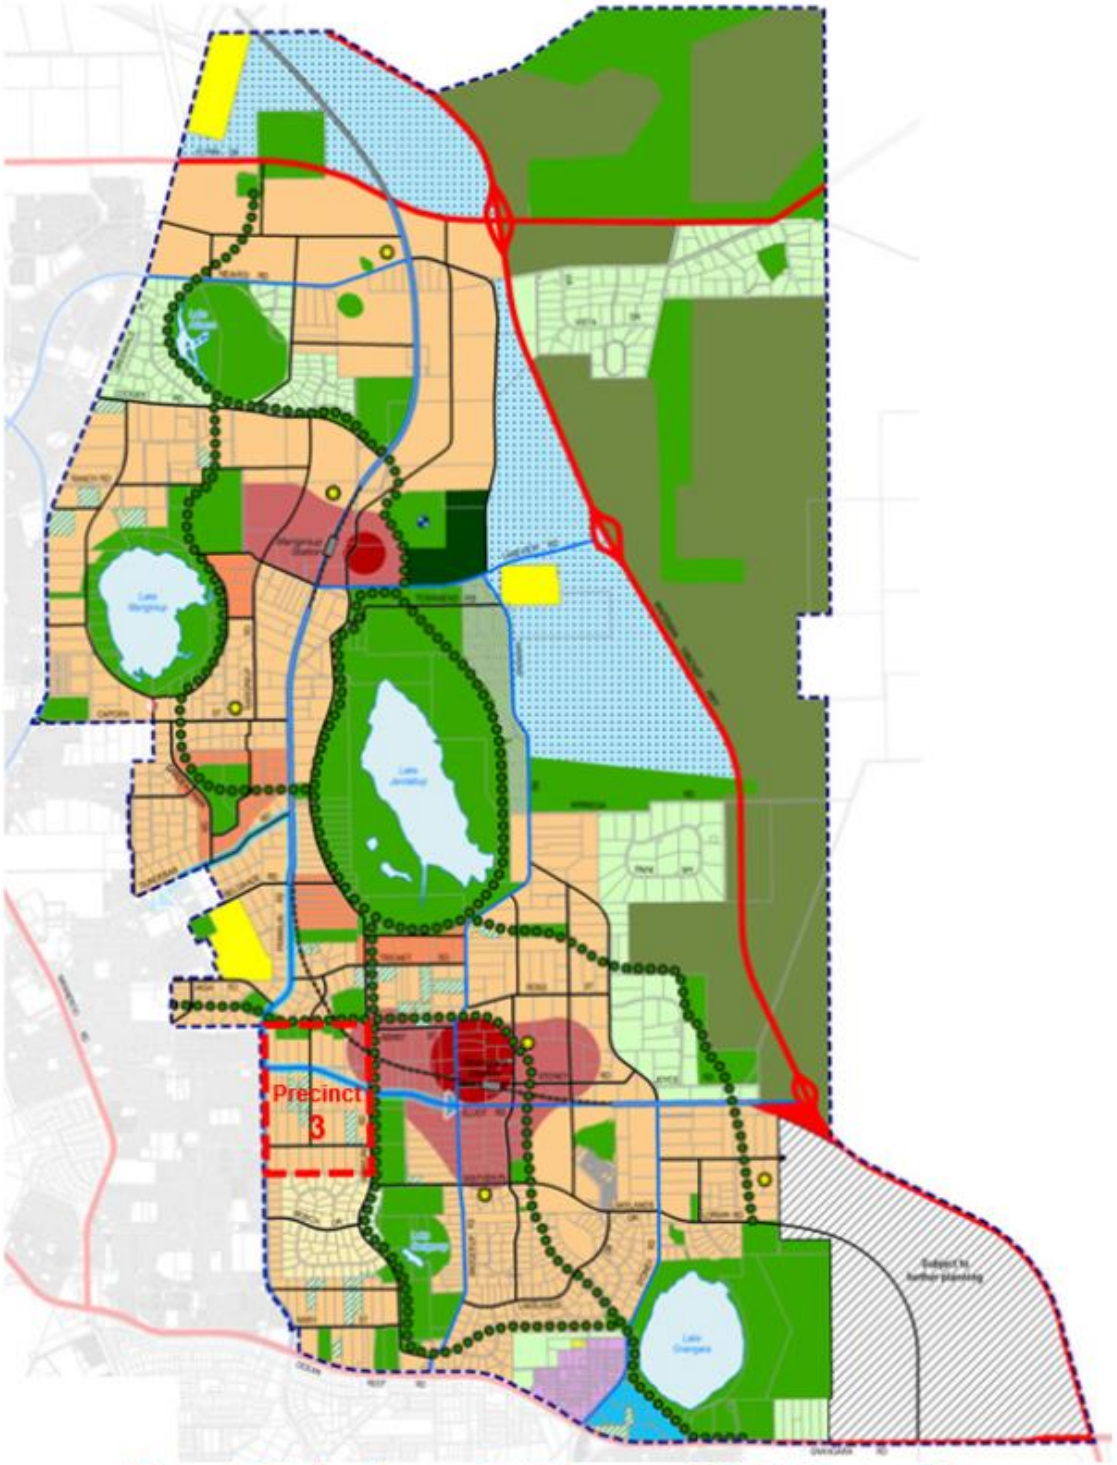

Figure 1: Site location on East Wanneroo District Structure Plan

2 Proposed Local Structure Plan

The proposed Local Structure Plan (LSP) for East Wanneroo Precinct 3 is included at **Appendix A** and a smaller copy (without legend) is shown in **Figure 2**.

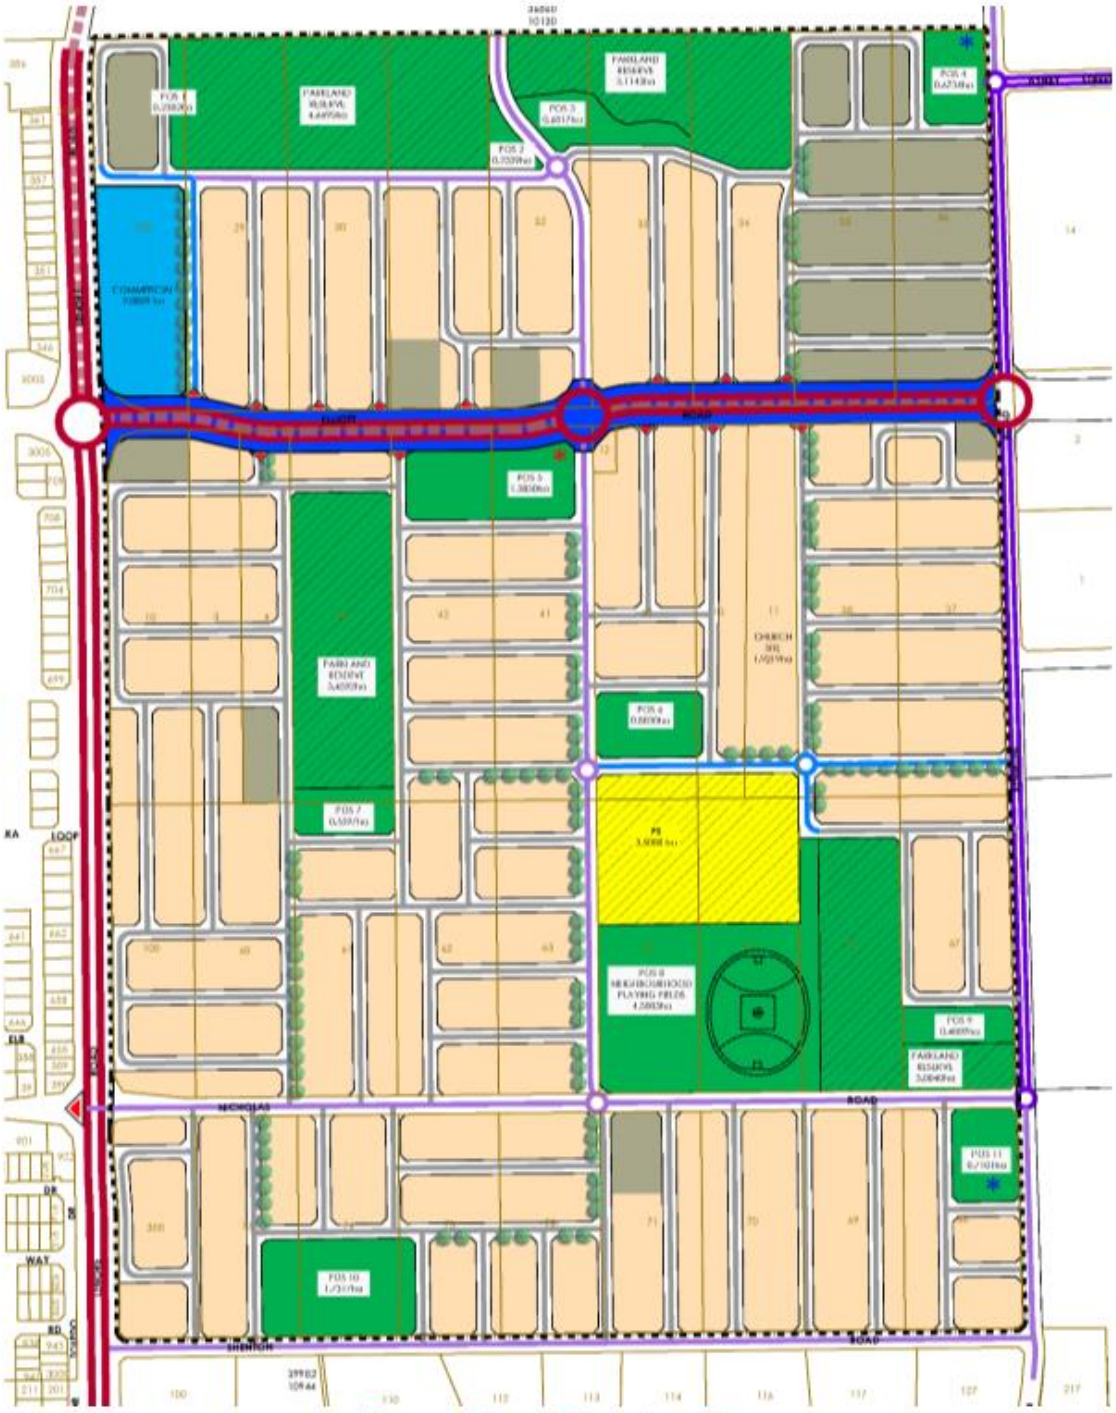

Figure 2: Local Structure Plan

The proposed land uses in the LSP area and anticipated size or quantity for the purpose of this Transport Impact Assessment, are summarised in **Table 1**.

Table 1: Proposed land uses

Land Use	Quantity
Residential	Approx. 1,750 dwellings
Local Centre	7,000m^2 NLA
Primary School	540 students

The main arterial road corridors affecting the LSP area are Lenore Road along the western boundary of this precinct and Elliot Road which runs east west across this precinct.

The District Structure Plan indicates a rapid transit route along Elliott Road (east of Lenore Road through this precinct) and on Lenore and Franklin Roads (north of Elliot Road), as shown in blue on **Figure 1**.

The proposed LSP fpr Precinct 3 proposes a slightly different alignment for the Elliot Road arterial corridor than the DSP. The proposed alignment in the LSP follows more closely to the existing Elliot Road alignment with road widening varying on the north and south sides to minimise impact on existing properties along Elliot Road, as shown in **Figure 2**.

3 Existing Situation

3.1 Existing Land Use

The subject site currently comprises 38 separate lots. Most have a single dwelling and various outbuildings, with the rest of the lot used for various agricultural, horticultural or outdoor storage uses, or still covered by native vegetation, as shown in **Figure 3**.

Figure 3: Existing Land Use

The southern boundary of the LSP area is the unconstructed road reserve of Shenton Road.

Existing land uses to the east of Benmuni Road are similar to the subject site. North and south of the subject site are rural residential subdivisions, and west of Lenore Road is the existing residential suburb of Hocking.

3.2 Existing Road Network

The existing road network and its classification in the Main Roads WA functional road hierarchy is illustrated in **Figure 4**.

Figure 4: Existing road hierarchy

Lenore Road is classified as a District Distributor B south of Elliot Road and a Local Distributor north of Elliot Road in the Main Roads WA functional road hierarchy. The posted speed limit on this section of Lenore Road is 70km/h.

North of Elliot Road, Lenore Road is constructed as a two-lane rural road with partially sealed shoulders, adjacent to the subject site.

South of Elliot Road, Lenore Road has recently been upgraded to dual carriageway standard with two lanes each way separated by an 8m wide median. Both carriageways include an on-road cycle lane.

Elliot Road is classified as an Access Road within the LSP area in the Main Roads WA functional road hierarchy. Within the LSP area it is constructed as a two-lane rural road with sealed width of approximately 7m and unsealed shoulders. It has a posted speed limit of 60km/h within the LSP area.

Nicholas Road is classified as an Access Road within the LSP area in the Main Roads WA functional road hierarchy. It is constructed as a two-lane rural road with sealed width of approximately 6m and unsealed shoulders. It has a posted speed limit of 60km/h within the LSP area.

Benmuni Road is classified as an Access Road in the Main Roads WA functional road hierarchy. It is constructed as a two-lane rural road with sealed width of approximately 6m and unsealed shoulders. It has a posted speed limit of 60km/h south of Nicholas Road and 80km/h north of Nicholas Road.

Shenton Road forms the southern boundary of the LSP area and is currently not constructed. It does not have a classification in the Main Roads WA functional road hierarchy.

The Lenore Rd / Elliot Rd intersection is constructed as a dual lane roundabout.

The Lenore Rd / Nicholas Rd intersection is a 4-way intersection with Give Way sign control on the eastern and western approaches. The Nicholas Road eastern leg has full movements (left and right turns) permitted but the western leg of Nicholas Road is restricted to left in / left out (LILO) only, with a triangular (seagull) traffic island on the western approach.

3.3 Existing Traffic Volumes

No existing traffic counts are available within the LSP area.

Existing traffic counts are available for Lenore Road north of Ocean Reef Road from the Main Roads WA website, as documented in **Table 2**. The 2024 count is from a 24 hour video survey at the Ocean Reef Rd intersection.

For this TIA report it is anticipated that Lenore Road traffic volumes decline progressively as we move further north and would currently be around 15,000vpd at Elliott Road.

Table 2: Existing Traffic Volumes

Road Name	Location	AWT (HV)	AM Peak	PM Peak	Date
Lenore Rd	North of Ocean Reef Rd	23,085 (10.8%)	2,026vph 0730-0830	2,161vph 1545-1645	2020/21
Lenore Rd	North of Ocean Reef Rd	21,417 (5%)	1,776vph 0730-0830	1,965vph 1530-1630	Tues 27 Aug 2024

3.4 Heavy Vehicle Routes

Restricted Access Vehicle (RAV) Network routes are designated for access by large heavy vehicle combinations that require special permits for each trip. Main Roads WA manages the RAV Networks and the permits for trucks to use them. **Figure 5** shows the roads that are permitted for use by Tandem Drive RAV Networks 2 (orange), 3, (light blue) and 4 (dark blue) vehicles in the surrounding area. RAV Networks 2, 3 and 4 permit access by a number of vehicle combinations up to 27.5m long subject to relevant height, width and weight limits.

Lenore Road is currently included in Tandem Drive RAV Network 4 with access south to and from Ocean Reef Road. (This section of Lenore Road is also included in other RAV Networks including Tandem Drive Network 4 Concessional Level 3, Tri Drive Network 1 including Concessional Level 3, PBS Tandem Drive Network 1 Concessional Level 3 and 27.5m Oversize B-Double, which offer other variations on maximum load and vehicle configurations.)

Figure 5: Restricted Access Vehicles Network

3.5 Public Transport

The closest existing bus route to the subject site is Route 467: Whitfords Station – Joondalup Station. The closest bus stops for route 467 are approximately 600m west of the LSP area along Wyatt Road.

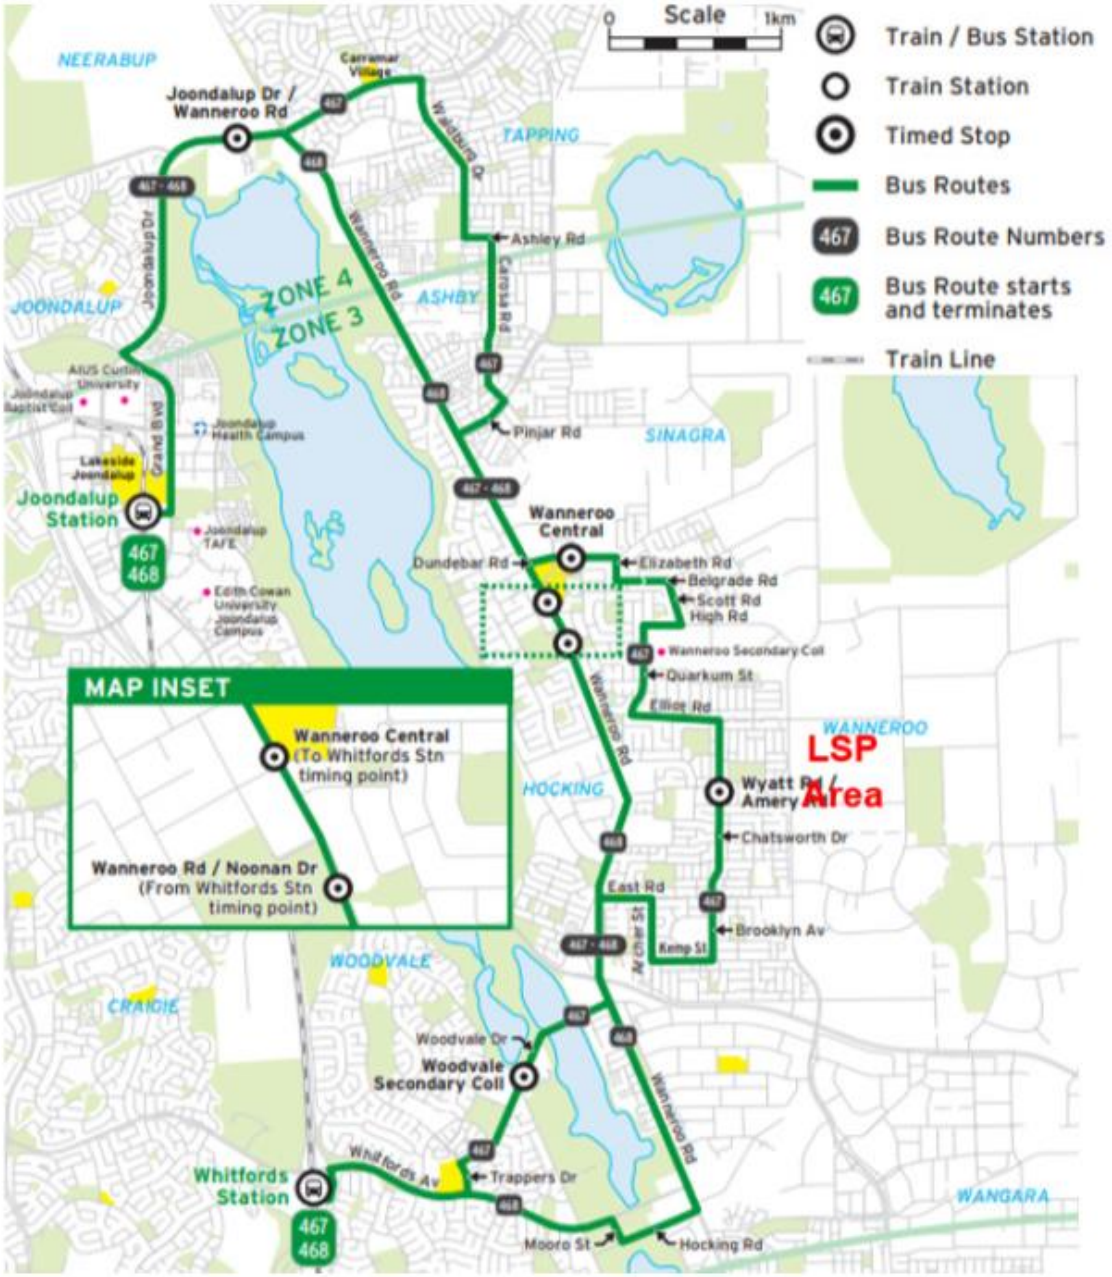

Figure 6: Existing bus routes 467 and 468

3.6 Pedestrian and Cyclist Facilities

Existing bicycle facilities in the surrounding area are illustrated on the Perth Bike Maps published by the Department of Transport, as shown in **Figure 7**. That Bike Map dates back to 2016 and does not show existing facilities on Lenore Road, which has on-road bike lanes and a 2.5m shared path on the western side. There are currently no bicycle facilities on Elliot Road, Nicholas Road and Benmuni Road within the LSP area.

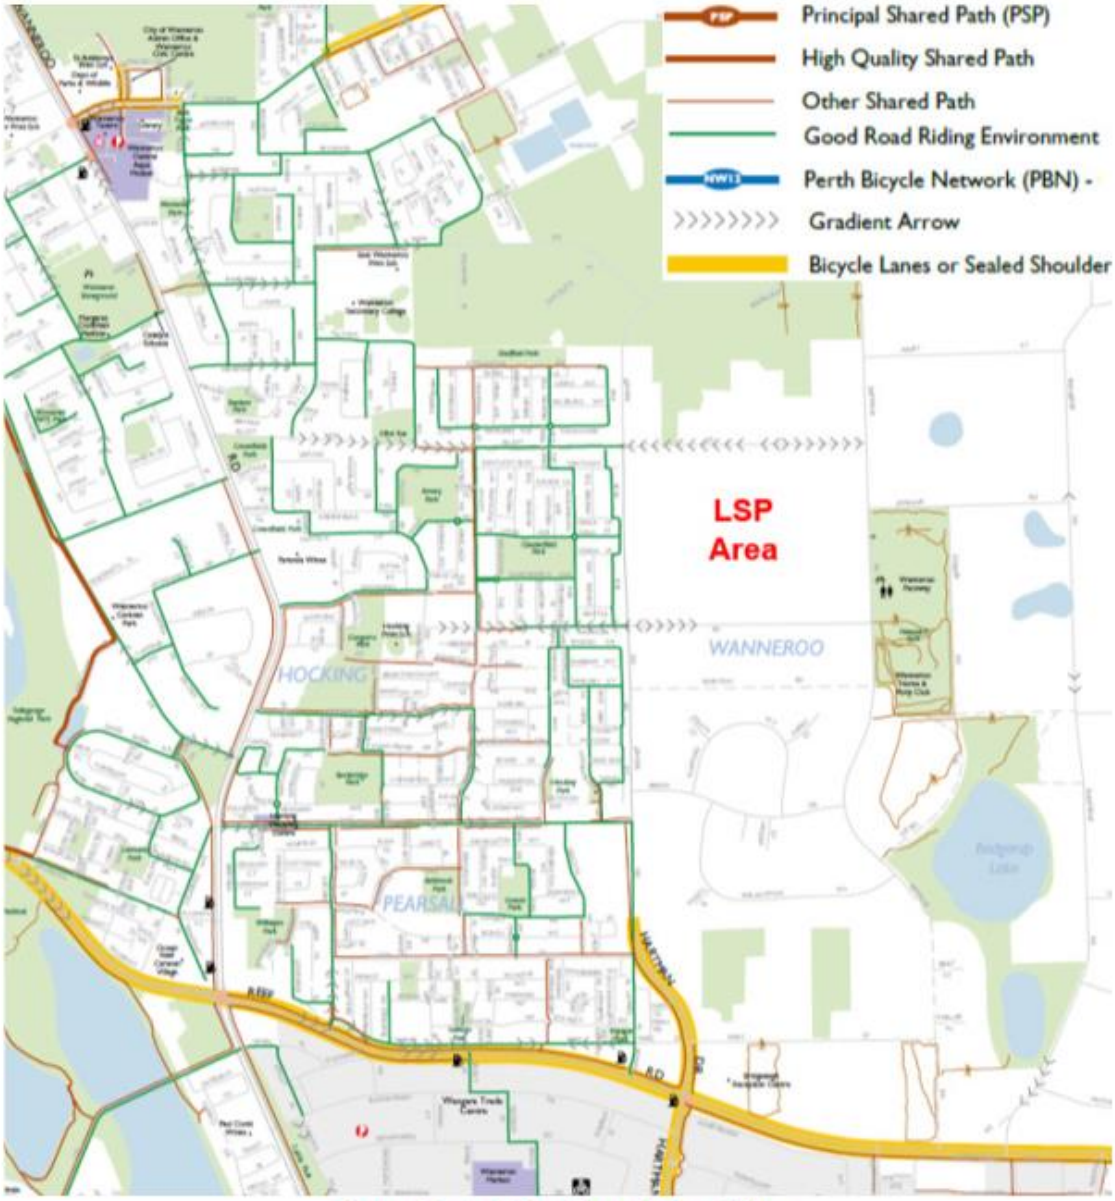

Figure 7: Existing bicycle facilities

High-level future planning for cycling facilities is now set out in Western Australia's Long Term Cycle Network (LTCN), which identifies an aspirational blueprint to ensure State and local governments continue to work together towards the delivery of a continuous cycling network providing additional transport options, recreational opportunities and support for tourism and commercial activity. The LTCN identifies the function of a route - primary, secondary or local - rather than the form it should

take. Function considers the type of activities that take place along a route, and the level of demand (existing and potential). A route's built form is based on the characteristics of the environment, including space availability, topography, traffic conditions (speed, volumes), primary users, and so on.

The LTCN in the East Wanneroo area is illustrated in **Figure 8**, which shows future primary routes (red), secondary routes (blue) and local routes (green).

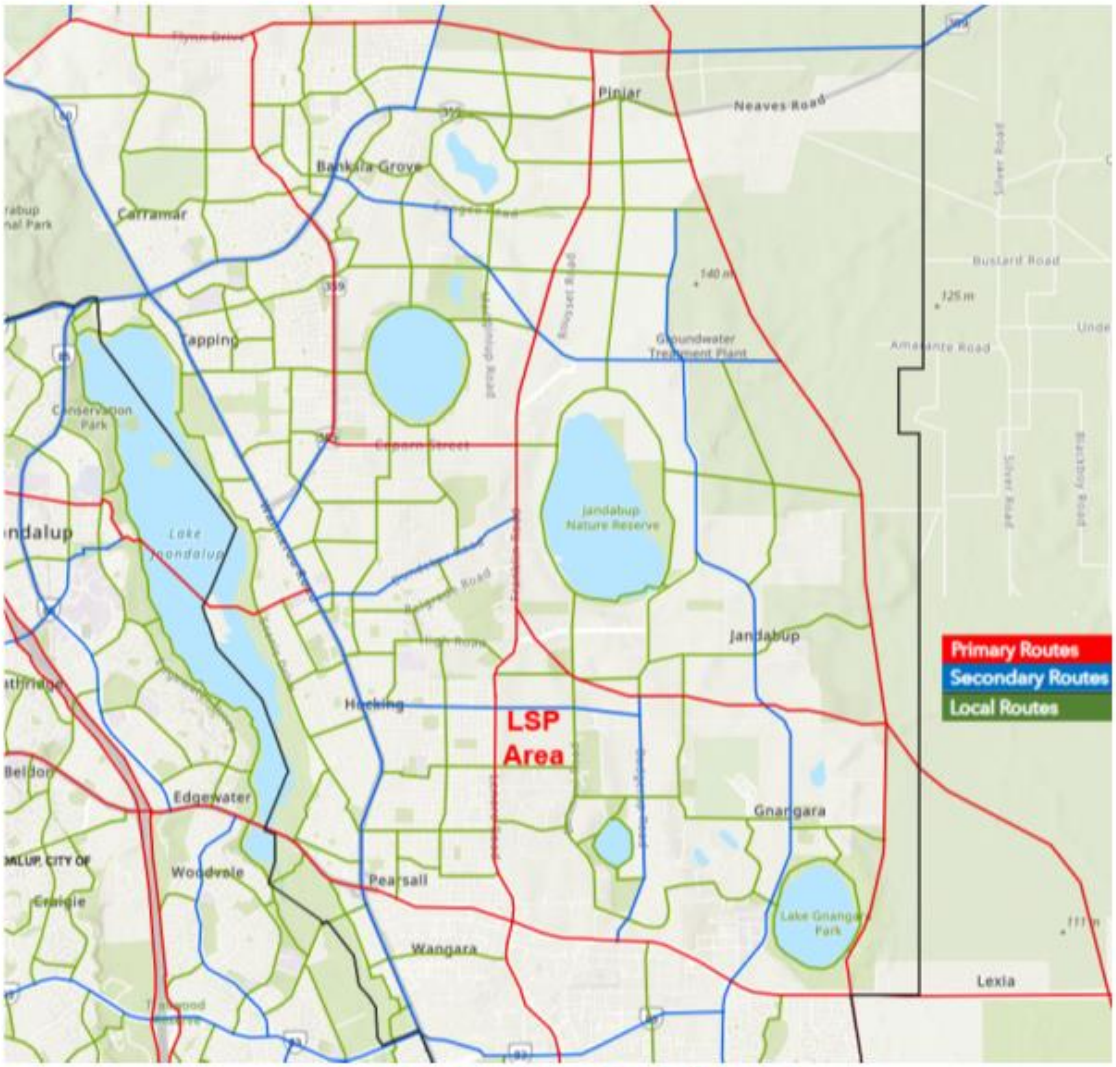

Figure 8: Long Term Cycle Network

A primary route is planned on Lenore Road on the western side of the LSP area. Elliot Road is planned as a secondary route in this area. A number of local routes are also shown in this area including Nicholas Road and Benmuni Road.

3.7 Changes to Surrounding Transport Network

The subject site is Precinct 3 of the *East Wanneroo District Structure Plan* (DSP), as shown in **Figure 1.**

The future arterial road network within the DSP area is illustrated in **Figure 9**. Key features of the future road network that are of particular relevance to Precinct 3 include:

- Whiteman Yanchep Highway (primary distributor) – a future 6-lane, controlled access highway along the eastern boundary of the DSP area;
- Lenore/Franklin Road (integrator arterial) – north south arterial road running along the western side of Precinct 3;
- Elliot Road (integrator arterial) – east west arterial road through Precinct 3 from Lenore Road to Whiteman Yanchep Highway;
- Nicholas Road (neighbourhood connector) – east west road through Precinct 3 from Lenore Road to Benmuni Road;
- Benmuni Road (neighbourhood connector) along the eastern boundary of Precinct 3; and
- A new central neighbourhood connector road running north south through Precinct 3 north of Nicholas Road.

The DSP shows a rapid transit route through Precinct 3 along Elliot Rd – Lenore Rd – Franklin Rd – Dundebar Rd (i.e. linking the existing Wanneroo town centre and the proposed district centre in the DSP area).

The DSP also shows a future railway line cutting across the northeast corner of Precinct 3 but the current status of that proposal is unclear. It is understood that current planning by the Department of Planning, Lands and Heritage (DPLH) may favour an express bus transit system instead of rail. This may take the form of bus lanes in the centre of the road along Elliot Rd – Lenore Rd – Franklin Rd (i.e. combining this section of the 'rail' route and rapid transit route) and may require signalised intersections instead of roundabouts to provide bus priority at key intersections. Preliminary advice indicates the number of bus stops would be limited and would not be located within Precinct 3. It should be noted that signalised intersections along this type of central median bus facility provide pedestrian access to the bus stops in the central median, so signalised intersections may not be necessary where there are no bus stops planned.

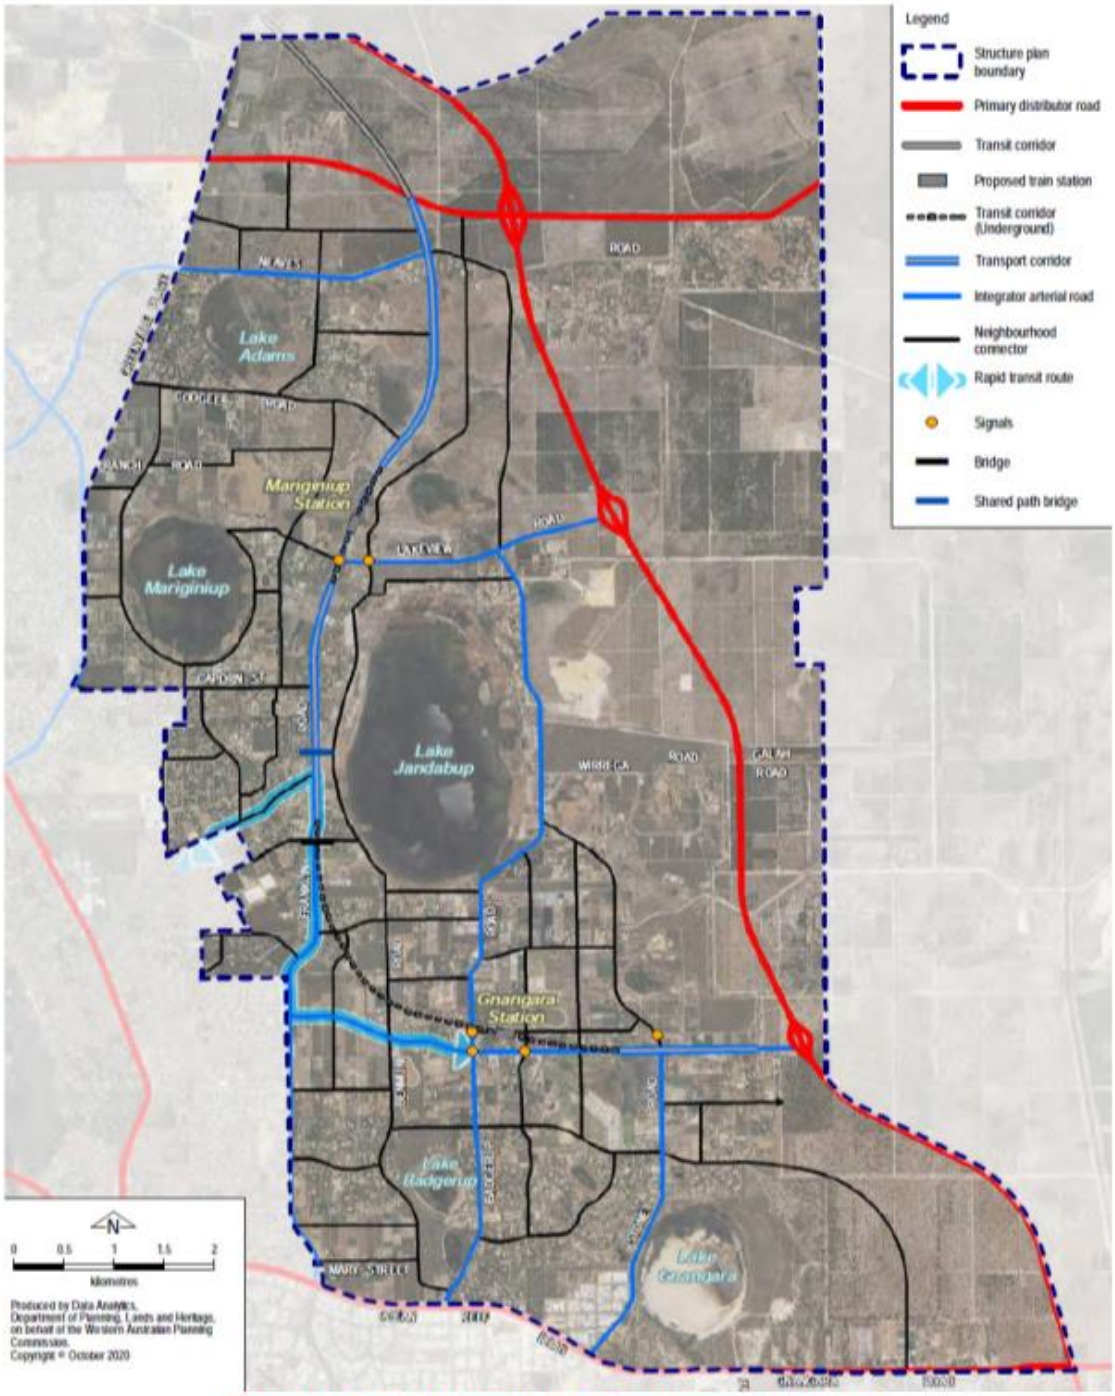

Figure 9: East Wanneroo DSP movement network

4 Proposed Transport Network

4.1 Road Hierarchy

The proposed hierarchy of roads in and around the LSP area is illustrated in **Figure 10** using the road hierarchy defined in the Western Australian Planning Commission *Liveable Neighbourhoods* (LN) policy.

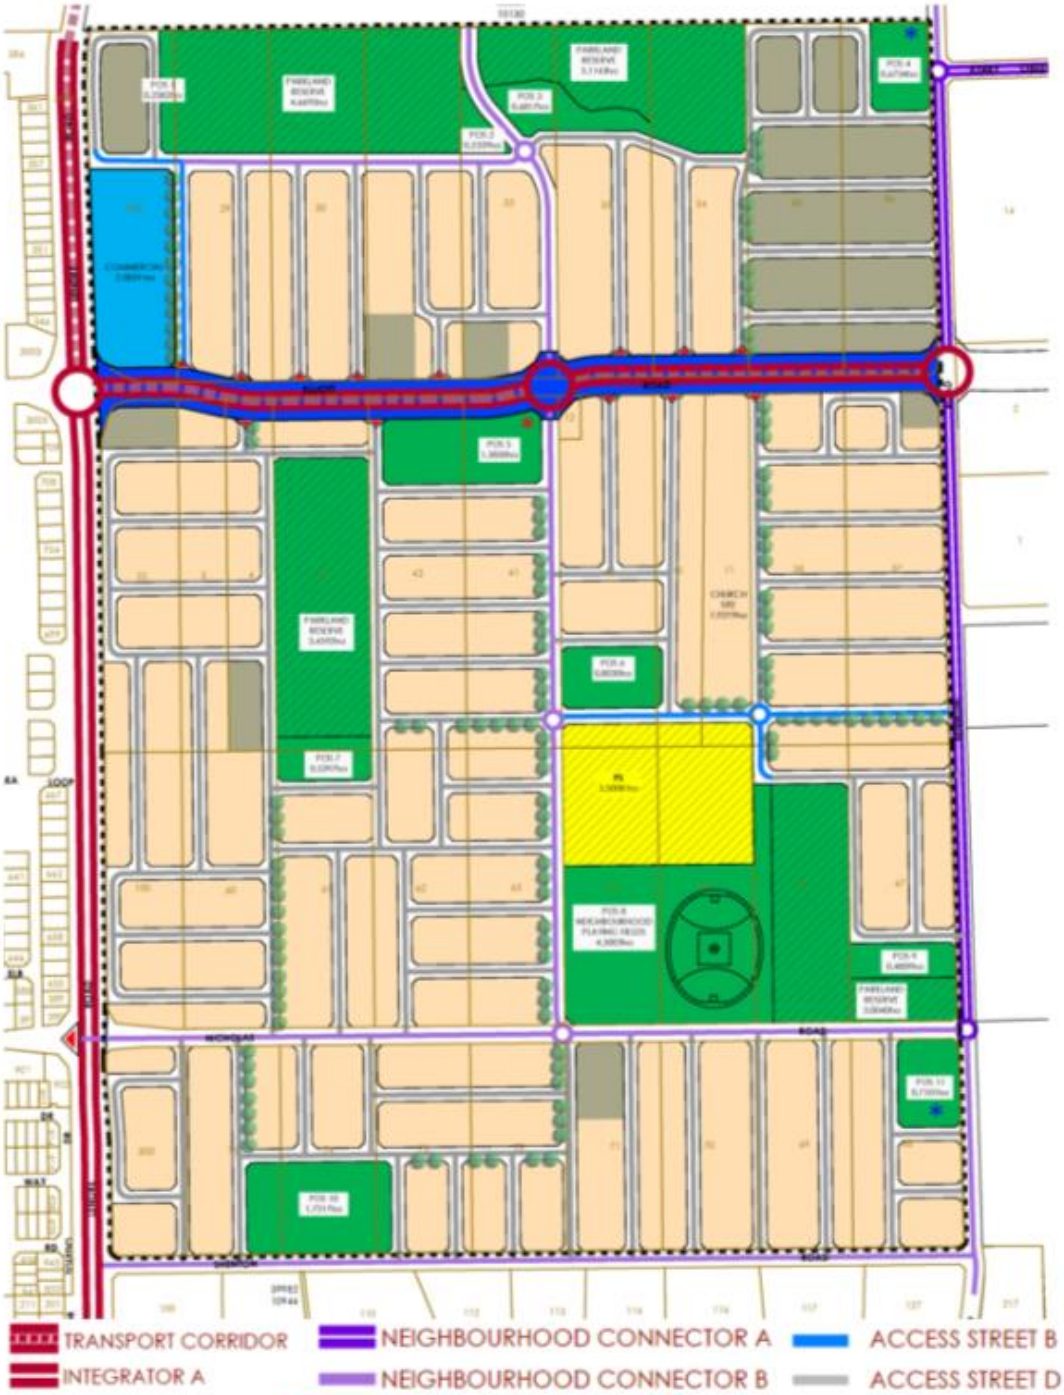

Figure 10: Proposed road hierarchy

The classification of roads in **Figure 10** is based on preliminary analysis of future traffic flows at section 6.3 of this report.

Liveable Neighbourhoods indicates that Integrator A roads are suitable for traffic flows up to 35,000vpd as dual carriageway roads (two lanes each way). However, there are existing examples of equivalent dual carriageway roads (with minimal minor side road or driveway access) in the Perth metro area carrying up to 50,000vpd[1], so traffic volumes above 35,000vpd can be accommodated subject to appropriate intersection treatments.

Integrator B roads are suitable for traffic flows up to 15,000vpd and can accommodate traffic flows up to 20,000vpd with suitable intersection treatments. There are no Integrator B roads within or adjacent to the LSP area

Neighbourhood Connector A roads are suitable for up to 7000vpd but some degree of flexibility with this upper limit may be appropriate in localised situations to avoid overdesigning some lengths of road. The main difference between Integrator B and Neighbourhood Connector A cross-sections is only the width of the median (6m versus 2m) and the Liveable Neighbourhoods policy does allow for the median of an Integrator B to be reduced in width on sections that do not require right turn lanes in the median.

Neighbourhood Connector B roads are suitable for traffic flows up to 3000vpd but again some degree of flexibility with this upper limit should be considered appropriate in localised situations.

An Access Street B is suitable for traffic flows up to 3000vpd and can accommodate embayed parking on both sides. Access Street B is recommended for access streets abutting school sites but would typically only have parking on one side adjacent to the school site to avoid having students cross the road to access parked cars.

An Access Street C is suitable for traffic flows up to 3000vpd. Its 7.2m sealed width accommodates on-street parking without restricting two-way traffic flow.

An Access Street D is suitable for traffic flows up to 1000vpd. Its 6m sealed width accommodates on-street parking but parked vehicles do restrict simultaneous two-way traffic flow.

Proposed road cross-sections for the Integrator A roads are provided in the *East Wanneroo District Structure Plan Road Planning Study* report (11 Sep 2019). The standard Option 1 cross-section is included at **Appendix B**. Option 1 (outside of neighbourhood and district centres) has 6m median, four 3.5m traffic lanes and two 2m cycle lanes in a 35m road reserve.

[1] For example, Armadale Rd west of Warton Rd, dual carriageway (2 lanes each way) carried 49,342vpd average weekday traffic in 2023/24.

The Transport Corridor shown in Figure 10 on Elliot Road (east of Lenore Road) and on Lenore Road (north of Elliot Road) is nominally widened to 45m in the LSP plan. This is basically an Integrator A with a substantially widened central median to accommodate two 3.5m bus lanes, as discussed in sections **3.7** and **4.2**. The transport corridor cross-section would be subject to detailed design at a later stage of transport network planning for this area.

Standard cross-sections from the WAPC Liveable Neighbourhoods policy for the Integrator B, Neighbourhood Connectors and Access Streets are shown in **Appendix B**.

4.2 Public Transport

Public transport planning in the DSP is discussed in section 3.7. As discussed, that public transport planning is currently unclear.

The LSP provides a 45m wide Transport Corridor along the Lenore Road / Elliot Road to accommodate potential bus lanes in the central median in accordance with most recent advice available from DPLH.

Those express bus lanes along Lenore Road / Elliot Road may not include any bus stops within the LSP area, so local bus services may also be required within the LSP area.

All of the proposed neighbourhood connectors and integrator arterial roads shown on **Figure 10** would be of suitable standard to accommodate bus services through this area, providing suitable options for future local bus routes to the neighbourhood centre and district centre to service this area. This allows suitable flexibility for the Public Transport Authority to plan future bus routes within this area.

4.3 Pedestrian and Cyclist Facilities

All of the proposed neighbourhood connectors and integrator arterial roads shown on **Figure 10** would have paths on both sides in accordance with Liveable Neighbourhoods guidelines, including a shared path on one side.

Paths would be required on at least one side of all roads in accordance with Liveable Neighbourhoods guidelines.

On-street cycle lanes are normally included only on Neighbourhood Connector A roads and above, due to traffic flows above 3000vpd on these categories of roads.

The resultant path network associated with the road network within the LSP area is indicated in **Figure 11**. This does not include paths outside of the road network, such as within public open space, which will be addressed by other consultants for this LSP.

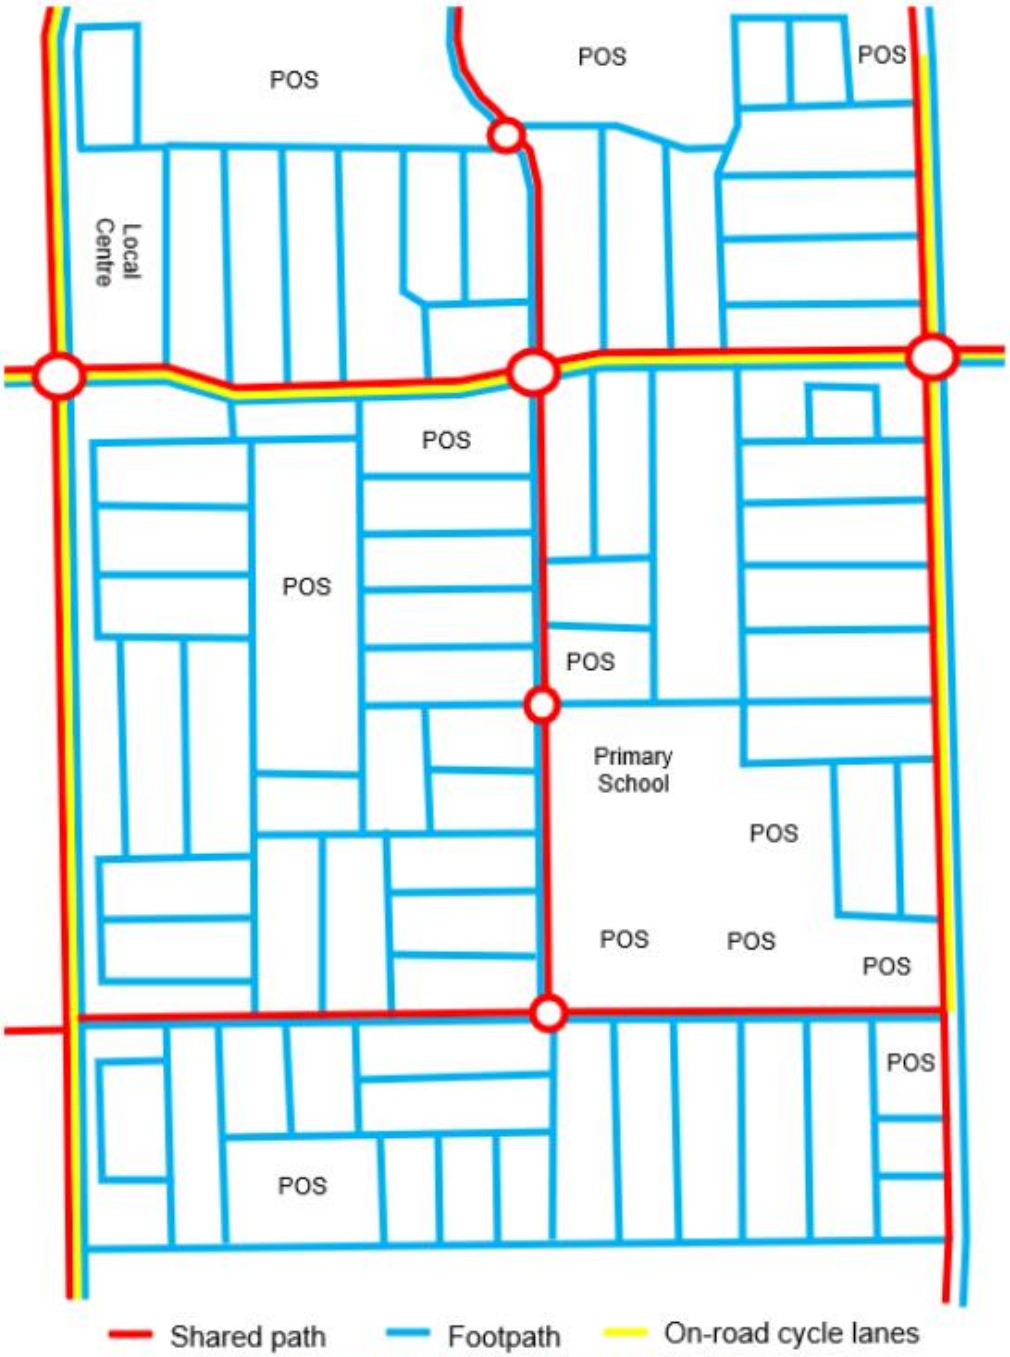

Figure 11: Pedestrian / Cycle Network

5 Integration with Surrounding Area

The *East Wanneroo District Structure Plan* (DSP) provides an overall plan to ensure coordination of future development of the subject site and the surrounding area. The proposed local structure plan for the subject site respects the principles and external connections of the DSP to ensure that good connectivity and integration with the surrounding area are achieved.

6 Analysis of the Transport Network

6.1 Assessment Period

The traffic assessment undertaken for the subject site is guided by the 2051 traffic projections reported for the arterial road network of the DSP area in the *East Wanneroo District Structure Plan Road Planning Study* report (2019) with full development of all land uses within the DSP area.

6.2 Traffic Generation and Distribution

The residential daily traffic generation rate used in the LSP area is 8 vehicle trips per day (vpd) per dwelling, which corresponds to peak hour trip generation rates of 0.8vph per dwelling recommended in the Western Australian Planning Commission (WAPC) *Transport Impact Assessment Guidelines* (2016). The anticipated yield of approximately 1,750 dwellings in the LSP area will therefore generate approximately 14,000vpd.

Information provided in the Department of Education's *Primary School Brief* indicates a daily trip rate of 2.6vpd per student is appropriate for new schools, with 1.0vph per student during before and after school peak periods. This is consistent with peak hour trip rates for schools in the WAPC TIA Guidelines. Therefore, the proposed primary school (540 students) is anticipated to generate approximately 1,400vpd.

The NSW *Transport Impact Assessment Guidelines* (2024) provides trip rate formulae for shopping centres in various size ranges. The trip rates for a small suburban shopping centre of 6,000 – 10,000m^2 GLFA have been utilised for the proposed local centre in Precinct 3. For 7,000m^2 GLFA with a major tenant of 3,500m^2 GLFA the estimated daily traffic generation is 7,180vpd with 528vph in the site's AM peak hour and 921vph in the site's PM peak hour of traffic generation.

It should be noted that some of the trips calculated above will be internal trips within the LSP area, so the total trips generated within the LSP area is not simply the sum of traffic generations listed above. For example, a trip from home to the local centre would be a single, combined trip rather than separate residential and shopping centre trips.

The sum of traffic generations listed above is approximately 22,580 trip ends within the LSP area, with approximately 20,230 of those being internal-to-external trips or external-to-internal trips across the LSP area boundary.

Trip distribution of these external trips for the LSP area has been modelled to approximately reproduce the same overall trip pattern evidenced by the DSP traffic projections in the *East Wanneroo District Structure Plan Road Planning Study* report. The resultant external traffic distribution of traffic to and from the LSP area is as follows:

- 21.2% North (Lenore Rd and Benmuni Rd)
- 3.3% West (Elliot Rd)
- 41.0% East (Elliot Rd and local roads)
- 34.5% South (Lenore Rd and Benmuni Rd)

6.3 Traffic Flow Forecasts

Daily traffic flows generated by the LSP area and through traffic through this precinct generated by the rest of the DSP area have been assigned on the LSP area road network and existing through traffic on Lenore Road has been added to determine future, full development, daily traffic flows on the LSP area road network.

The resultant total daily traffic flows on the LSP area road network are shown in **Figure 12**. The component of these total traffic flows that has an origin or destination within the LSP area is shown in brackets.

For comparison, the *East Wanneroo District Structure Plan Road Planning Study* (2019) modelled 2051 daily traffic volumes of 47,000vpd on Lenore Rd (between Ocean Reef Rd and Elliot Rd) and 15,000vpd on Elliot Rd (between Lenore Rd and Badgerup Rd).

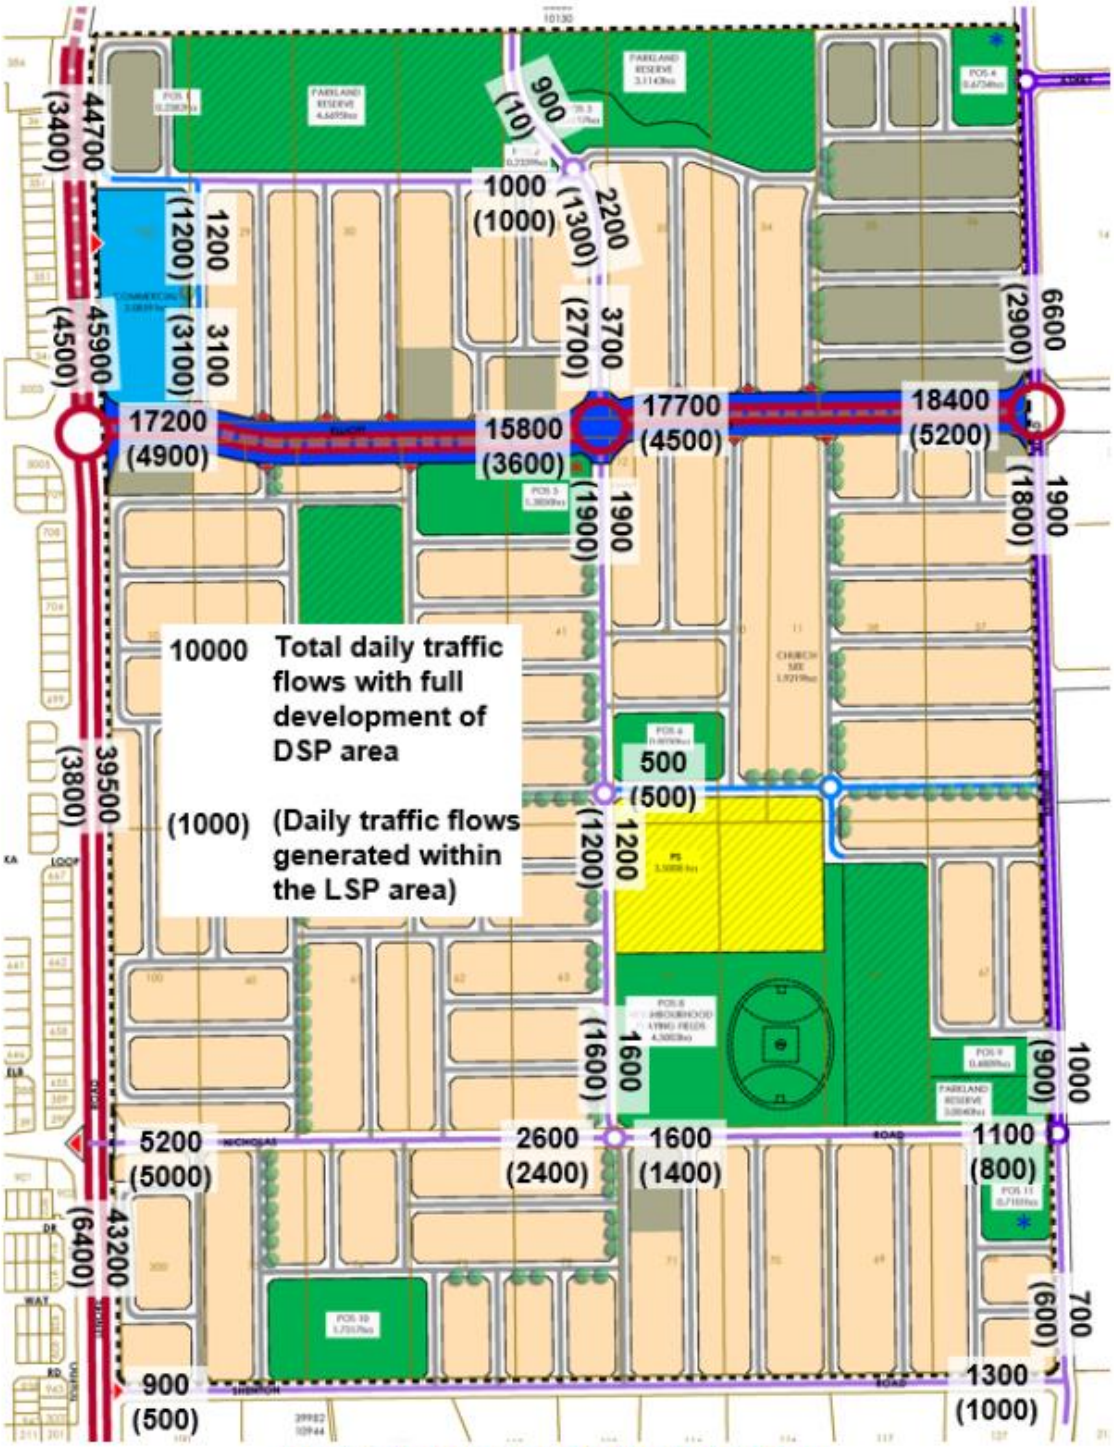

Figure 12: Future total daily traffic flows

6.4 Roads and Intersections

The anticipated future road network around the subject site has been detailed in section 4 of this transport impact assessment, including discussion of the proposed road hierarchy in section 4.1.

Advice on current planning from the Department of Planning, Lands and Heritage (DPLH) indicates they are looking at an express bus transit system (instead of rail) with bus lanes in the centre of the road along Elliot Rd – Lenore Rd – Franklin Rd.

The *East Wanneroo District Structure Plan Road Planning Study* report (2019) identifies the Lenore Road / Elliot Road 4-way intersection as a future roundabout or signalised intersection. The *East Wanneroo District Structure Plan* report (2021, figure 2.12) does identify a number of future signalised intersections within the DSP area but does not indicate a signalised intersection at the Lenore Road / Elliot Road intersection.

Accordingly, the Precinct 3 LSP anticipates the Lenore Road / Elliot Road intersection will remain as a multi-lane roundabout. Advice on current planning from DPLH in December 2024 indicated they were looking at grade-separation of bus lanes over the roundabout so express buses would have no delays at this major intersection.

The two neighbourhood connector intersections along Elliot Road through the LSP area (at the central north south neighbourhood connector and at Benmuni Road) are proposed as multi-lane roundabouts in the Precinct 3 LSP. Right turn traffic from Elliot Road (and U-turn trafficon Elliot Road) would need to merge right into the central median bus lanes on approach to these roundabouts (similar to the way left turn traffic is allowed to merge left into the more conventional kerbside bus lanes about 50m before each intersection on a number of other major roads throughout the Perth metropolitan area). This system would still provide significant priority for buses at these roundabouts.

All other access street intersections along this section of Lenore Road would be restricted to left in / left out only, with U-turns accommodated at the three roundabouts.

Lenore Road is currently being upgraded to dual carriageway (two lanes each way) adjacent to the LSP area including channelisation of the Lenore Road / Nicholas Road intersection. The eastern approach is being constructed to accommodate full movements including right turns, whereas the western approach is restricted to left in / left out only. It is anticipated that this intersection would be upgraded in future with traffic signals to facilitate those right turn movements when required as traffic volumes increase in future.

Other four-way intersections on lower order roads (mainly along the neighbourhood connectors) are proposed as single-lane roundabouts in this LSP area.

The location and type of intersection treatment of key intersections are shown in **Figure 13**.

Figure 13: Key intersections

6.5 Intersection Analysis

Intersection capacity analysis has been undertaken for five key intersections along Lenore Road and Elliot Road for the weekday AM peak and PM peak hour flows that correspond to the modelled 2051 daily traffic flows in **Figure 12**. The peak hours adopted for this analysis are 8-9AM and 3-4PM to include before and after school peak traffic, which is anticipated to be a particularly significant factor in determining peak periods in this vicinity. Nominal express bus lane flows of 60 buses per hour each way are assumed in the Elliot Road bus lanes for this analysis.

The key intersections analysed are as follows:

- Lenore Rd / Elliot Rd roundabout;
- Lenore Rd / Nicholas Rd signalised intersection (western leg LILO only);
- Lenore Rd / Shenton Rd T-interscetion (LILO);
- Elliot Rd / central neighbourhood connector roundabout (with bus lanes); and
- Elliot Rd / Benmuni Rd roundabout (with bus lanes).

Capacity analysis of these intersections has been undertaken using SIDRA Network analysis in the SIDRA computer software package. SIDRA is an intersection modelling tool commonly used by traffic engineers for all types of intersections. SIDRA outputs are presented in the form of Degree of Saturation, Level of Service, Average Delay and 95% Queue. These characteristics are defined as follows:

- Degree of Saturation is the ratio of the arrival traffic flow to the capacity of the approach during the same period. The Degree of Saturation ranges from close to zero for infrequent traffic flow up to one for saturated flow or capacity.
- Level of Service is the qualitative measure describing operational conditions within a traffic stream and the perception by motorists and/or passengers. In general, there are 6 levels of service, designated from A to F, with Level of Service A representing the best operating condition (i.e. free flow) and Level of Service F the worst (i.e. forced or breakdown flow).
- Average Delay is the average of all travel time delays for vehicles through the intersection.
- 95% Queue is the queue length below which 95% of all observed queue lengths fall.

The results of the SIDRA analysis are summarised in **Appendix C**. Each of the intersections along Lenore Road will have some minor movements that will experience some degree of congestion commensurate with the relatively high 2051 traffic volumes on Lenore Road, but all three intersections will have sufficient capacity to accommodate the modelled 2051 traffic flows.

The two roundabouts with central bus lanes on Elliott Road both operate satisfactorily with very good level of service A or B for all movements.

Schematic diagrams from the SIDRA analysis of the five intersections assessed are shown in **Appendix C**, including a mark-up of the Lenore Rd / Elliot Rd roundabout with grade-separated bus lanes to help visualise that concept. Note that these

diagrams are not to scale and are not design drawings. They are purely intended to illustrate the number and arrangement of traffic lanes required at each intersection to accommodate the modelled future traffic flows.

6.6 Access to Frontage Properties

The WAPC Liveable Neighbourhoods policy requires that *"Development along integrator B and neighbourhood connector streets with ultimate vehicle volumes over 5,000 vehicles per day should be designed either so vehicles entering the street can do so travelling forward, or are provided with alternative forms of vehicle access."*

There is to be no direct driveway access to residential development on zoned land within the LSP area from the Integrator A roads – Lenore Road and Elliot Road.

It is anticipated that a left in / left out driveway crossover would be provided on Lenore Road for the proposed Local Centre.

The only other road within the LSP area carrying more than 5,000vpd is Benmuni Road north of Elliot Road. It is proposed that residential lots along the western side of that section of Benmuni Road would be oriented towards the side streets and have driveway access from those side streets to avoid driveway access on this section of Benmuni Road.

All of the other roads in the LSP area are expected to carry less than 5,000vpd, so no restriction on vehicular access is required.

6.7 Pedestrian / Cycle Networks

The proposed network of footpaths and shared paths for pedestrians and cyclists is described in section 4.3 of this Transport Impact Assessment. This network of paths will provide an excellent level of accessibility and permeability for pedestrians and cyclists within the LSP area, and connections to neighbouring precincts at strategic locations.

The WAPC *Transport Impact Assessment Guidelines* (2016) provides guidance on the levels of traffic volumes that are likely to affect the ability for pedestrians to cross various types of road. Based on that guidance an undivided two-lane road should be acceptable for pedestrians crossing traffic volumes of up to approximately 11,000 vpd and this threshold can be increased to around 28,000 vpd by adding a central median or pedestrian refuge islands. On a four-lane road, because of its greater carriageway width, this threshold is lower; even with a median island the threshold is only around 16,000 vpd.

Only Lenore Road and Elliot Road are expected to carry future traffic flows above these levels.

The future signalised intersection at Lenore Rd / Nicholas Rd will include appropriate pedestrian phasing to assist pedestrians and cyclists crossing Lenore Road at that location.

An additional pedestrian crossing facility should be provided on Lenore Road north of Elliot Road to assist pedestrian and cyclist movements from residential areas west of Lenore Road to access the local centre. This could be in the form of a signalised pedestrian crossing when traffic and pedestrian numbers meet the warrants for that type of facility, or potentially a pedestrian overpass or underpass if required.

A suitable pedestrian crossing facility should also be provided on Elliot Road east of the local centre to assist pedestrian and cyclist movements from residential areas west of Lenore Road to access the local centre. This could be in the form of a signalised pedestrian crossing when traffic and pedestrian numbers meet the warrants for that type of facility. The location of that facility should be subject to future investigation in conjunction with public transport planning along Elliot Road to ensure it also serves bus passengers that will need to cross Elliot Road.

It is anticipated that a guard-controlled school crossing would be appropriate at the primary school site to assist students crossing the adjacent neighbourhood connector road before and after school. Guard-controlled school crossings can easily be accommodated on that neighbourhood connector at any location that suits the internal and external access routes of the school at detailed design stage.

Information from the 2002-2006 Perth & Regions Travel Survey (PARTS) indicated that 25.4% of primary school students walk or cycle to school and 26.7% walk or cycle home from school. Therefore a 540-student primary school would typically have about 140 students walking or cycling.

The Children's Crossings and Road Safety Committee documents *Application for a Type A Children's Crossing* and *Application for a Type B Children's Crossing* indicate *"the warrant criteria for a children's crossing are contained in the Main Roads WA publication Planning and Designing for Pedestrians: Guidelines (version 4 dated 30 November 2011). Generally, the warrant criteria of minimum student pedestrian numbers and vehicle numbers must be met for an application for a new [Type A or] Type B children's crossing to be viewed favourably by the Committee; however environmental factors, risk factors and local conditions will also be considered by the Committee."*

Warrant criteria indicate that a Type A Children's Crossing may be provided where a minimum of 20 students and 200 vehicle movements occur within the hour immediately before and immediately after school, for a primary school. The warrants are lower for a Type B Children's Crossing at 10 students and 100 vehicle movements.

Such facilities can only be applied for by a School Principal or the President / Secretary of the relevant school/parent organisation (eg. P&C or P&F). The anticipated numbers of primary students crossing the Neighbourhood Connector road on the western side of the primary school would potentially meet these warrants in future so it would be expected that the school would apply for this type of facility when future student numbers and movements meet those warrants..

6.8 Access to Public Transport

As noted in section 3.7, it is understood that current planning by DPLH may favour an express bus transit system instead of rail. This may take the form of bus lanes in the centre of the road along Elliot Rd – Lenore Rd – Franklin Rd (i.e. combining this section of the 'rail' route and rapid transit route). Preliminary advice indicates the number of bus stops would be limited and would not be located within Precinct 3.

Accordingly, other local bus services would be required to provide public transport access for residents of the LSP area.

At this stage of the structure planning process those local bus routes are not known. As noted in section 4.2, all of the proposed neighbourhood connectors and integrator arterial roads shown on **Figure 10** would be of suitable standard to accommodate bus services through this area, providing suitable options for future feeder bus routes to the district centre where they would also have access to that express bus transit system for longer trips. This allows suitable flexibility for the Public Transport Authority to plan future bus routes within this area.

7 Conclusions

This Transport Impact Assessment relates to the Local Structure Plan (LSP) for Precinct 3 of the East Wanneroo District Structure Plan in the City of Wanneroo.

The subject site is located approximately 2.5 kilometres southeast of the Wanneroo town centre and is bounded by Lenore Road to the west and Benmuni Road to the east, with Elliot Road and Nicholas Road running east west within the subject site.

The DSP shows a future railway line cutting across the northeast corner of Precinct 3 but the current status of that proposal is unclear. It is understood that current planning by the Department of Planning, Lands and Heritage (DPLH) may favour an express bus transit system instead of rail. This may take the form of bus lanes in the centre of the road along Elliot Rd – Lenore Rd – Franklin Rd.

Preliminary advice indicates the number of bus stops on this express bus route would be limited and would not be located within Precinct 3, so it is anticipated that additional local bus services would be provided in future. All of the proposed neighbourhood connectors and integrator arterial roads in the LSP area would be of suitable standard to accommodate bus services, providing suitable options for local bus routes to the district centre. This allows suitable flexibility for the Public Transport Authority to plan future bus routes within this area.

Precinct 3 will include residential neighbourhoods for approximately 1,750 dwellings, a local activity centre and a primary school.

The traffic flows generated within the LSP area will result in approximately 20,230vpd of internal-to-external trips or external-to-internal trips across the LSP area boundary, as well as internal traffic flows between land uses within the LSP area.

The main arterial roads within the LSP area are Lenore Road running north south along the western boundary and Elliot Road running east west through the middle of the LSP area. Ultimately, traffic volumes in the order of 40,000 to 46,000vpd are forecast on this section of Lenore Road and 15,000 to 18,000vpd on Elliot Road.

Five key intersections along Lenore Road and Elliot Road within the LSP area have been analysed to determine likely future intersection requirements.

A comprehensive network of paths and on-road cycle lanes are planned on the LSP area road network in accordance with *Liveable Neighbourhoods* policy guidelines.

The proposed signalised intersection on Lenore Road and Nicholas Road will assist pedestrians and cyclists crossing Lenore Road at that location but additional pedestrian facilities should be planned across Lenore Road and Elliott Road in the vicinity of the proposed local centre.

A guard-controlled school crossing would be anticipated on the north south neighbourhood connector road adjacent to the primary school site in future.

Integrator B - arterial streets

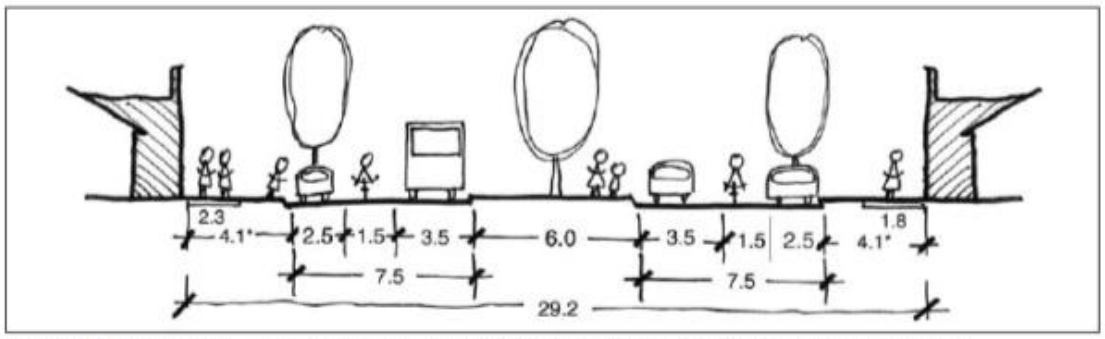

Figure 15: Integrator B – outside centres – 60 km/hr (up to 15 000 vehicles per day - see note 2).

Two lanes, central median, buses, cycle lanes and parking. Development fronting, forward vehicle exiting.

Note:
1. Central median may be reduced along sections where right-hand turn lanes are not required.
2. Traffic volumes up to 20 000 vehicles per day may be acceptable provided that detailed design addresses intersections, parking, access and bus movement (**table 1**).
3. The 6.0 m median is required for staged vehicle crossings and for clearance to trees.
4. The 2.5 m parking bays may be indented into the verge. If parking is indented, then the verge may be increased to 5.5 m minimum including parking, and reserve width may be decreased as a result, to 27 m.

* Where a wider shared path, extensive street furniture or provision for reversing into parking lane is required, the verge width will need to be widened. Typically verges may be up to 4.5 m and total reserve width 30 m.

Neighbourhood connector streets

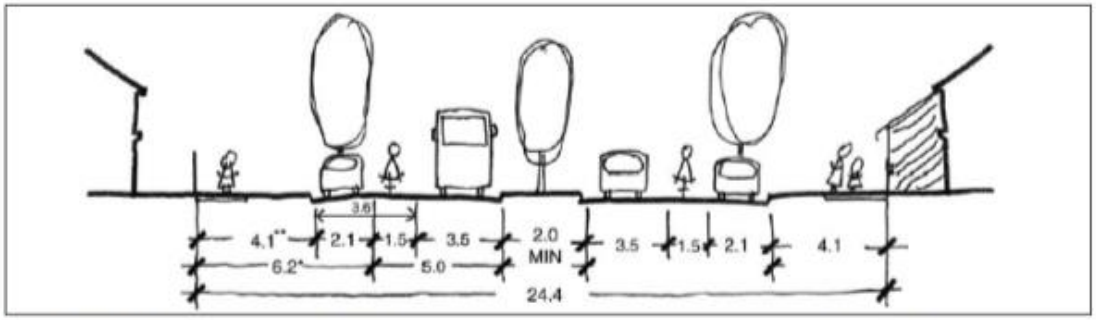

Figure 17: Neighbourhood connector A – 50 km/hr (up to 7000 vehicles per day, with >3000 vehicles per day preferred).

Central median, buses, cycle lanes and parking. Bus stops are normally in travel lane against kerb extensions in parking lane.

Note:
1. * For volumes less than 3000 vehicles per day and the street is not ever likely to be a bus route, the road pavement may be reduced from 5.0 m to 4.0 m with no marked cycle lane, and the total reserve width reduced to 22.4 m.
2. Reversing out from abutting dwellings is acceptable if less than 5000 vehicles per day. For 5000-7000 vehicles per day, protected reversing spaces may be used for larger lots using paired driveway crossovers with ability to reverse into the parking lane.
3. Median will need appropriately located breaks to allow U-turns to frontage-access properties.
4. ** Verge width (including parking) can often be reduced from 6.2 m to 5.5 m with indented parking, to reduce overall reserve width to 23.0 m.
5. For larger trees, central median widths of 2.5-4 m are preferred. For medians with drainage swales, a minimum median width of 6 m is suggested.
6. Where a visually narrower carriageway is needed to assist with speed control, or where parking turnover is high, the parking lane may be widened to 2.3 m and the cycle lane narrowed to 1.2 m.
7. In some circumstances the median may be omitted. On these sections, indented parking should normally be used to assist in visually narrowing the carriageway. If parking is indented, then the reserve width will be 22.4 m.

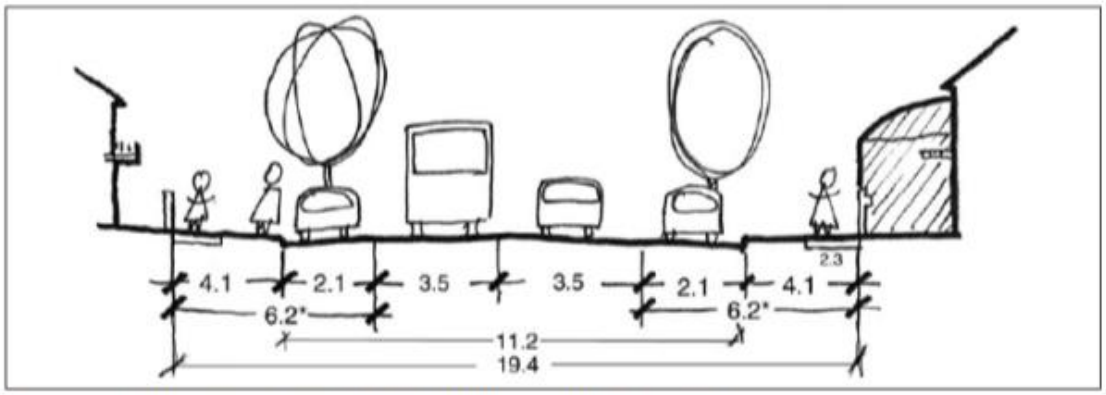

Figure 18: Neighbourhood connector B – 50 km/hr (<3000 vehicles per day).

Lower volume neighbourhood connector, bus route, no cycle lanes, parking. Typically a residential environment with low parking turnover. Detailing of design to visually narrow street (eg including trees in parking lane, painted parking line), together with other speed control mechanisms to limit typical operating speeds to less than 50 km/hr. Bus stops in travel lane against kerb extension in parking lane. A2-2.3 m shared path provided on at least one verge in lieu of on-street cycle lane.

Note: * Verge width (including parking) can often be reduced from 6.2 m to 5.5 m with indented parking, to reduce overall reserve width to 18.0 m.

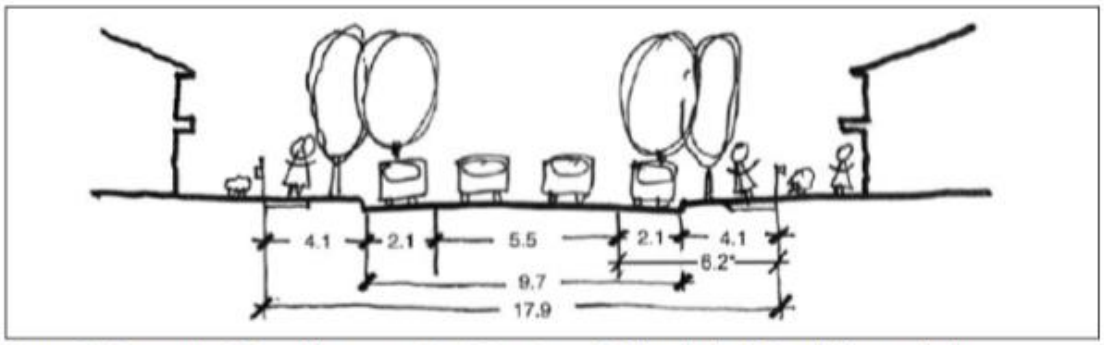

Figure 20: Access street B – wider access street Target speed 40 km/hr (< 3000 vehicles per day).

Wider access street suited to higher density residential areas (typically R30–R40+, or where dwelling density is greater than around 1 per 250 m²) with higher parking demand. Extensive parking, no bike lane, no buses, trees in verge, with additional trees in parking lane if required.

Note:
1. May reduce verge adjacent to park to 1.0 m when fronting public parkland.
2. Trees may be in verge and/or in parking lane.
3. * Verge and parking lane as shown (6.2 m) can often be reduced to 5.5 m if parking is indented, and total street width reduced to 16.5 m.

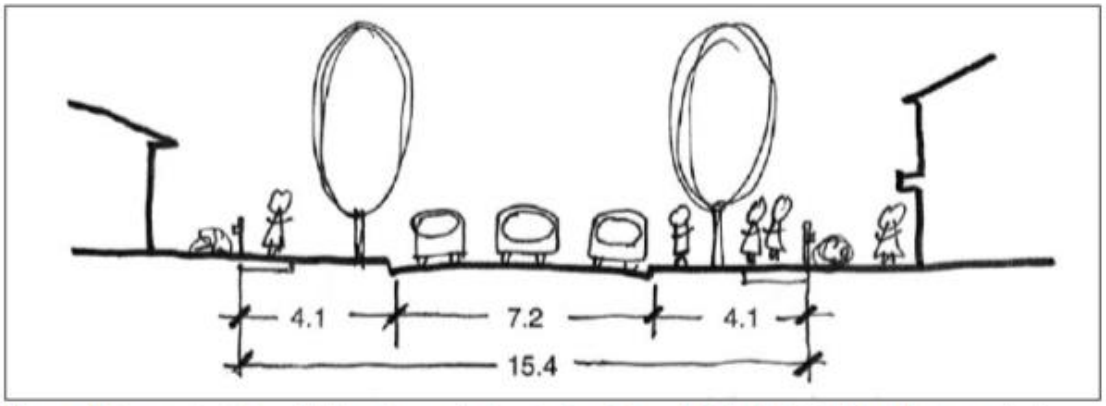

Figure 21: Access street C – yield (or give way) street – Target speed 40 km/hr (< 3000 vehicles per day).

Standard access street or yield (or give way) street. Relatively frequent parking on both sides of street (on the pavement) desirable and needed as part of speed control. No buses, no bike lane. This is likely to be the most common residential street in densities up to and often including R30 - R35 (or a typical lot size down to 250-300 m^2).

Note: May reduce verge adjacent to park to 1.0 m when fronting public parkland.

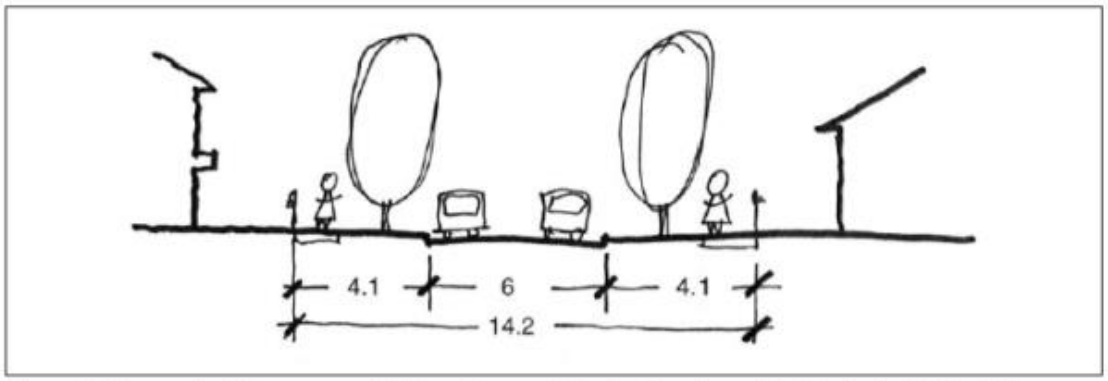

Figure 22: Access street D – narrow yield (or give way) street – Target speed 30 km/hr (< 1000 vehicles per day).

Narrower access street for shorter lengths, low parking demand, serving larger lots. No buses, no bike lanes, no indented parking. Staggered parking on both sides of street as part of speed control, low speed. Not through route, low traffic volume.

Note:
1. May reduce verge adjacent to park to 1.0 m when fronting public parkland.
2. Where the street is short and vehicle volume is less than 150 vehicles per day, pavement may be reconfigured as a slow speed, comprehensively-designed street, with a 3.4 m travel lane and 2.1 m embayed parking spaces. Passing bays are to be provided every 70-80 m, and maximum length 150 m. If a street is comprehensively designed and designated as a shared space for pedestrians and vehicles and target speed is <20 km/hr, no footpath may be required.
3. A pavement width of 5.5 m may be considered, subject to the agreement of the local authority. The reserve should remain at 14.2 m to allow for future flexibility.

Appendix C

SIDRA INTERSECTION ANALYSIS

Engineering a better future for over 20 years!

Layout pictures are schematic functional drawings reflecting input data. They are not design drawings.

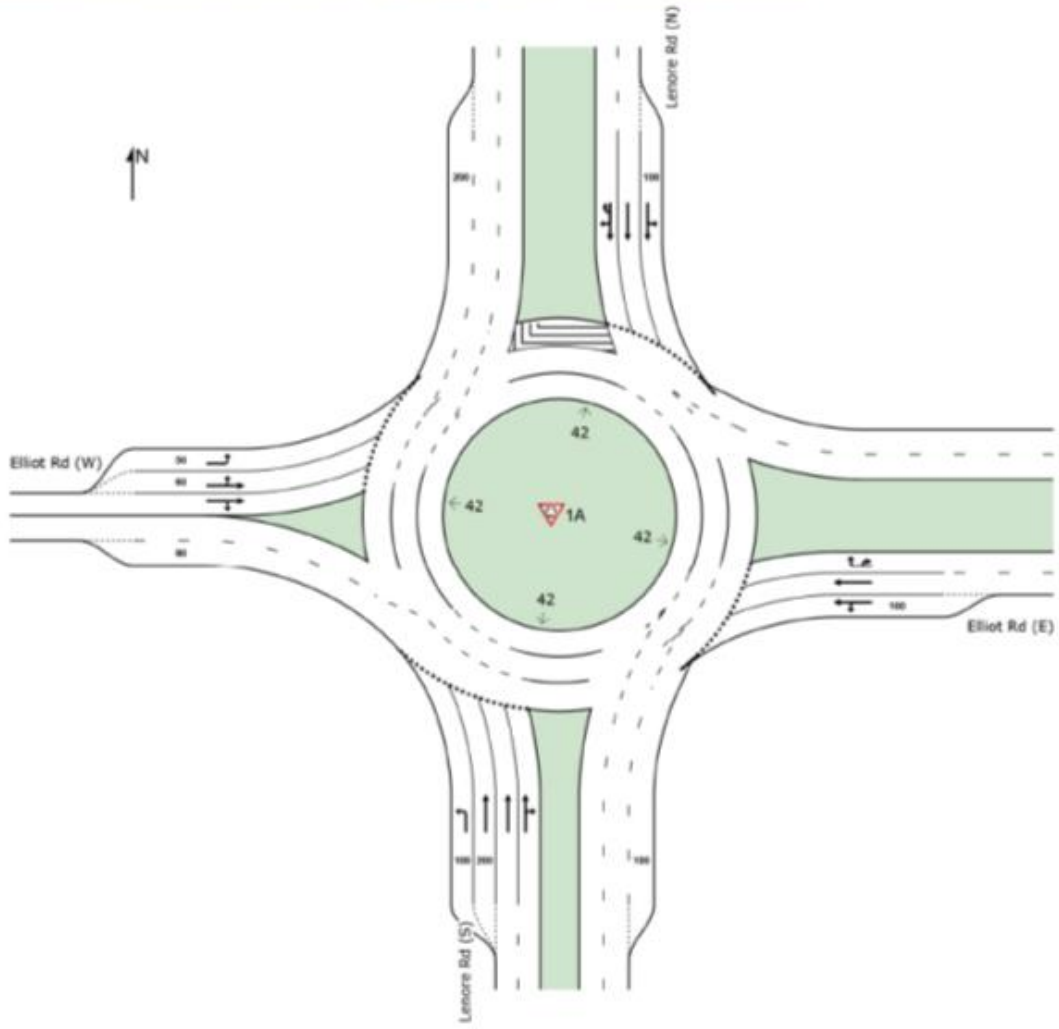

Figure C1. Lenore Rd / Elliot Rd roundabout layout analysed in SIDRA

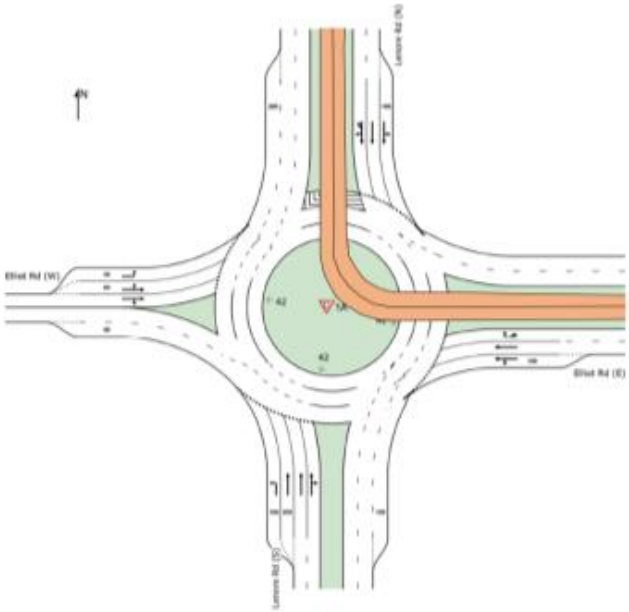

Note: The roundabout is proposed to have bus lanes in the central median on the east and north approaches and grade-separated on a bridge over the roundabout. This does not affect the operation of the roundabout and has not been modelled in SIDRA.

Table C1a. SIDRA results – Lenore Rd / Elliot Rd roundabout – 2051 weekday 8-9AM peak

1. INTRODUCTION

It is proposed to subdivide land referred to as East Wanneroo Precinct 3 (refer *Figure 1-1*) with the proposed structure plan shown in *Figure* 1-2. This report considers the noise impacts from future road traffic. Road traffic noise is assessed against *State Planning Policy No. 5.4 Road and Rail Noise* (SPP 5.4). The current maps associated with SPP 5.4 do not show the area as being impacted by designated roads (refer *Figure 1-3*). However, for the purpose of this study, Lenore Road is given consideration on the basis of information provided by Transcore from the East Wanneroo District Structure Plan.

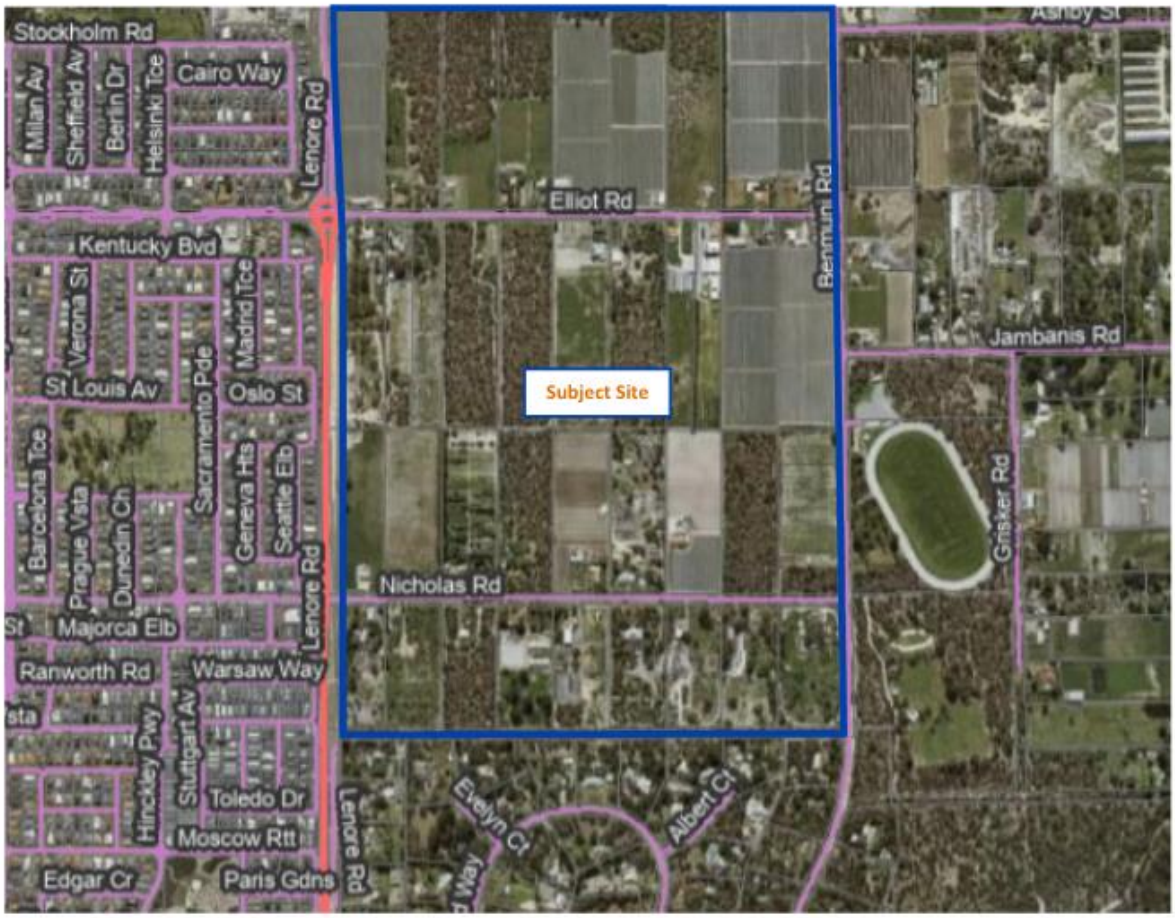

Figure 1-1: Structure Plan Location (Source: DPLH PlanWA)

Appendix B contains a description of some of the terminology used throughout this report.

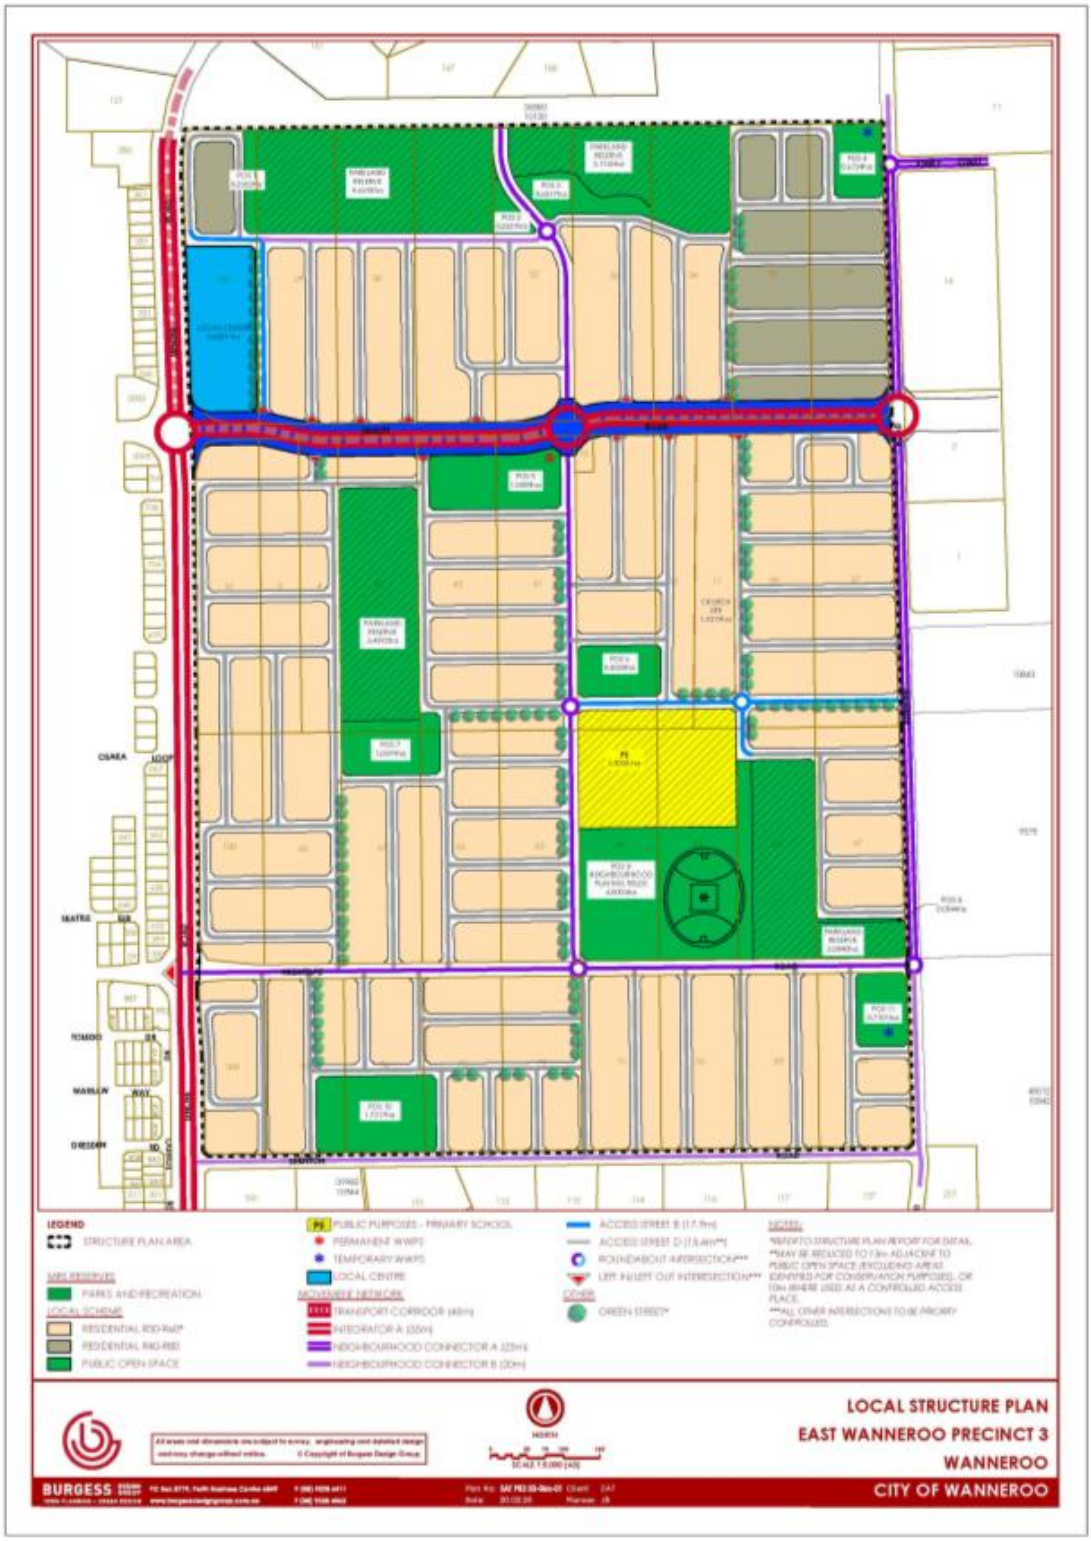

Figure 1-2: Local Structure Plan Layout

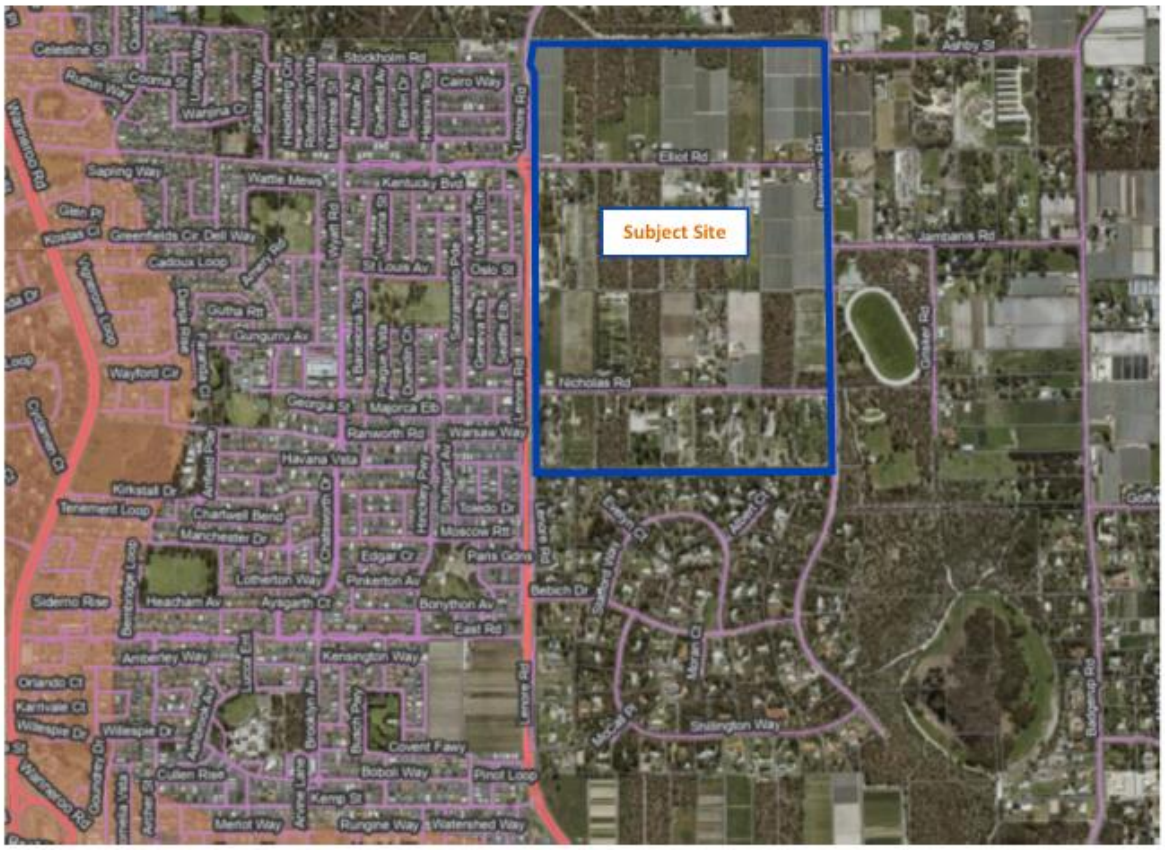

Figure 1-3: SPP 5.4 Designated Roads (Source: DPLH PlanWA)

2. CRITERIA

The criteria relevant to this project is provided in *State Planning Policy No. 5.4 Road and Rail Noise* (hereafter referred to as SPP 5.4) produced by the Western Australian Planning Commission (WAPC). SPP 5.4 is supported by the *Road and Rail Noise Guidelines* (the Guidelines) and the Department of Planning, Lands and Heritage mapping. The objectives of SPP 5.4 are to:

- Protect the community from unreasonable levels of transport noise;
- Protect strategic and other significant freight transport corridors from incompatible urban encroachment;
- Ensure transport infrastructure and land-use can mutually exist within urban corridors;
- Ensure that noise impacts are addressed as early as possible in the planning process; and
- Encourage best practice noise mitigation design and construction standards.

Table 2-1 sets out noise targets that are to be achieved by proposals under which SPP 5.4 applies. Where the targets are exceeded, an assessment is required to determine the likely level of transport noise and management/mitigation required.

Table 2-1: Noise Targets for Noise Sensitive Land-Use

Scenario	Outdoor Noise Target		Indoor Noise Target	
Noise-sensitive land-use and/or development	55 dB $L_{Aeq(Day)}$	50 dB $L_{Aeq(Night)}$	40 dB $L_{Aeq(Day)}$ (Living and Work Areas)	35 dB $L_{Aeq(Night)}$ (Bedrooms)

Notes:

- Day period is from 6am to 10pm and night period from 10pm to 6am.
- The outdoor noise target is to be measured at 1-metre from the most exposed, habitable[1] facade of a noise sensitive building.
- For all noise-sensitive land-use and/or development, indoor noise targets for other room usages may be reasonably drawn from Table 1 of Australian Standard/New Zealand Standard AS/NZS 2107:2016 *Acoustics – Recommended Design Sound Levels and Reverberation Times for Building Interiors* (as amended) for each relevant time period.
- Outdoor targets are to be met at all outdoor areas as far as is reasonable and practicable to do so using the various noise mitigation measures outlined in the Guidelines.

The application of SPP 5.4 is to consider anticipated traffic volumes for the next 20 years from when the noise assessment has been undertaken.

[1] *A habitable room is defined in State Planning Policy 3.1 as a room used for normal domestic activities that includes a bedroom, living room, lounge room, music room, sitting room, television room, kitchen, dining room, sewing room, study, playroom, sunroom, gymnasium, fully enclosed swimming pool or patio.*

3. METHODOLOGY

Noise modelling has been undertaken in accordance with the requirements of SPP 5.4 and associated Guidelines. The computer program *SoundPLAN 8.2* was utilised incorporating the *Calculation of Road Traffic Noise* (CoRTN) algorithms, modified to reflect Australian conditions. The modifications included the following:

- Vehicles were separated into heavy (Austroads Class 3 upwards) and non-heavy (Austroads Class 1 and 2) with non-heavy vehicles having a source height of 0.5 metres above road level and heavy vehicles having two source heights at 1.5 metres and 3.6 metres above road level;
- A -0.8 dB correction has been applied to the lower level heavy vehicle noise source and -8.0 dB to the higher level noise source based on the *Transportation Noise Reference Book*; Paul Nelson (1987), so as to provide consistent results with the CoRTN algorithms;
- Adjustment of -1.7 dB has been applied to the predicted levels for the 'at façade' case, based on the findings of *An Evaluation of the U.K. DoE Traffic Noise Prediction*; Australian Road Research Board, Report 122 ARRB – NAASRA Planning Group (March 1983).

Predictions are made at heights of 1.4 metres above ground floor level and at 1.0-metre from an assumed building façade, resulting in a + 2.5 dB correction due to reflected noise.

Note that no noise monitoring has been undertaken at this stage, although this would be undertaken prior to subdivision stage.

Various input data are included in the modelling and these are discussed in *Section 3.1* to *Section 3.5*.

3.1. Ground Topography

An old (2010) road design for Lenore Road was incorporated into the noise model along with using spot heights from Google outside of Lenore Road. At subdivision, it is expected that finished lot levels and layouts will be available and used for noise modelling.

Indicative building outlines have been included as these can provide barrier attenuation when located between a source and a receiver, in much the same way as a hill or wall. All buildings are assumed to be single storey with heights of 3.5 metres. Note the homestead at #176 Elliot Road is expected to remain and has been included.

3.2. Road Surface

The corrections applied for different road surface finishes are provided in *Table 3-1*.

Table 3-1: Noise Relationship Between Different Road Surfaces

Chip Seal				Asphalt			
14mm	10mm	5mm	Slurry	Dense Graded	Novachip	Stone Mastic	Open Graded
+3.5 dB	+2.5 dB	+1.5 dB	+1.0 dB	0.0 dB	-0.2 dB	-1.5 dB	-2.5 dB

The existing road surface is dense graded asphalt and assumed to remain unchanged into the future.

3.3. Vehicle Speed

The existing posted speed is 70 km/hr and assumed to remain unchanged into the future.

3.4. Traffic Volumes

Forecast (2051) traffic volumes were provided by Transcore taken from the East Wanneroo District Structure Plan and shown in *Figure 3-1*. From *Figure 3-1*, the following volumes were used in the noise model:

- Lenore Road Future Traffic Volumes:
  - South of Nicholas Road 21,600 vehicles per day each direction with 6% heavy vehicles;
  - North of Nicholas Road 19,750 vehicles per day each direction with 6% heavy vehicles; and
  - North of Elliot Road 22,950 vehicles per day each direction with 6% heavy vehicles.

Note there is an existing MRWA Traffic Count (2020/21) that shows heavy vehicle percentage of 10.8% for Lenore Road, just north of Ocean Reef Road (23,085 vehicles per day in both directions). It is expected that the increased traffic volumes in the future will be predominantly light vehicles (cars) and therefore 6% was used.

Under SPP 5.4, an assessable road is either one identified on PlanWA maps or one that carries at least 25,000 vehicles per day, with only Lenore Road meeting this criteria.

Figure 3-1: Forecast Traffic Volumes

3.5. Ground Absorption

The ground absorption has been assumed to be 0.0 (0%) for the roads, 0.5 (50%) outside of the roads and 1.0 (100%) for public open spaces, noting that 0.0 represents hard reflective surfaces such as water and 1.0 represents absorptive surfaces such as grass.

4. RESULTS

The results of the noise modelling are provided as a noise contour plot in *Figure 4-1*.

5. ASSESSMENT

The objectives of SPP 5.4 are to achieve:

- Indoor noise levels specified in *Table 2-1* in noise-sensitive areas (e.g. bedrooms and living rooms of houses); and
- A reasonable degree of acoustic amenity for outdoor living areas on each residential lot.

Where the outdoor noise targets of *Table 2-1* are achieved, no further noise controls are necessary.

With reference to the predicted noise levels in *Section 4*, it is evident the outdoor noise target will be exceeded at some lots.

Given the early stages of the Structure Plan, the noise mitigation is indicative only and would be further refined in detailed design. Outlined below are recommendations for road traffic noise to comply with SPP 5.4:

- Where lots are separated from Lenore Road by a local road and will face Lenore Road (e.g. lots north of the Local Centre), Quiet House Packages as per the Policy Guidelines (refer *Appendix A*) can be adopted. The reason this can be appropriate is the outdoor living areas (OLAs) to these dwellings will naturally be located on the side opposite the road corridor. Noise walls can also be considered in this scenario to reduce the Quiet House Package. For instance, where lots are within Exposure C, a noise wall may reduce this to Exposure B or A, depending on height.
- Where dwellings will be side on to the corridor and separated by a local road, Quiet House Packages will again be required. In this case, noise walls can also be provided to reduce the noise levels and also provide more freedom to the location of the OLA. Where noise walls are not provided as part of subdivision, either one would need to be provided by the lot owner on their lot boundary or their OLA is to be located on the east side of the dwelling, so that it is shielded from Lenore Road.
- Where dwellings immediately adjoin the corridor, a minimum 2.4-metre high noise wall is to be provided along with Quiet House Packages.

All of the above will be considered as the design progresses and prior to subdivision design, along with noise monitoring to calibrate the noise model and predicting to possible double storey dwellings. However, the analysis shows that compliance can be achieved with SPP 5.4. A preliminary noise mitigation plan is provided on *Figure 5-1*.

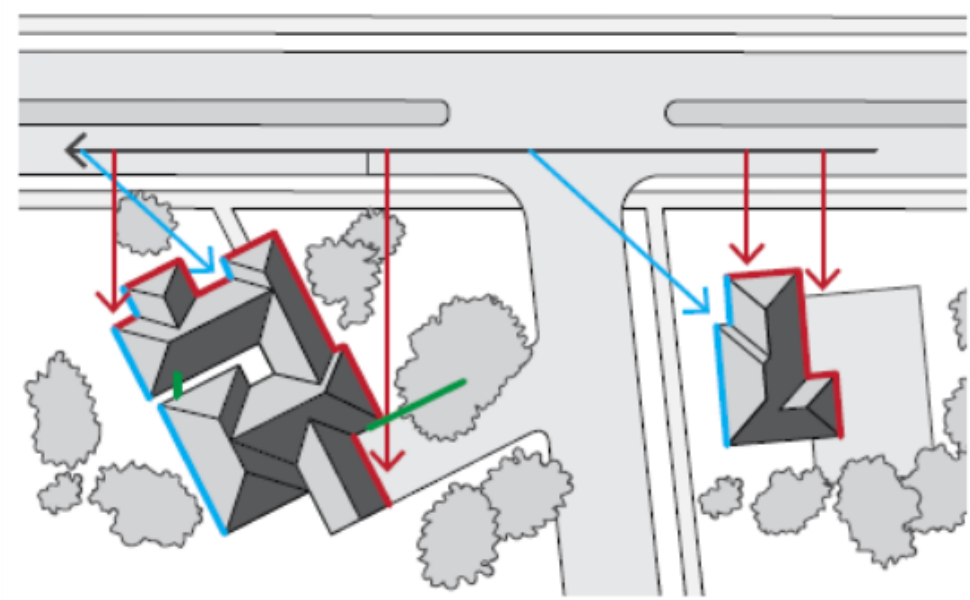
Appendix A – Quiet House Packages

The packages and information provided on the following pages are taken from *Road and Rail Noise Guidelines* (September 2019).

Where outdoor and indoor noise levels received by a noise-sensitive land-use and/or development exceed the policy's noise target, implementation of quiet house requirements is an acceptable solution.

With regards to the packages, the following definitions are provided:

- **Facing** the transport corridor (red): Any part of a building façade is 'facing' the transport corridor if any straight line drawn perpendicular (at a 90 degree angle) to its nearest road lane or railway line intersects that part of the façade without obstruction (ignoring any fence).
- **Side-on** to transport corridor (blue): Any part of a building façade that is not 'facing' is 'side-on' to the transport corridor if any straight line, at any angle, can be drawn from it to intersect the nearest road lane or railway line without obstruction (ignoring any fence).
- **Opposite** to transport corridor (green): Neither 'side on' nor 'facing', as defined above.



Quiet House Package A

56-58 dB $L_{Aeq(Day)}$ & 51-53 dB $L_{Aeq(Night)}$

Element	Orientation	Room	
		Bedroom	Indoor Living and Work Areas
External Glazing	Facing	• Up to 40% floor area ($R_w + C_{tr} \geq 28$): – Sliding or double hung with minimum 10mm single or 6mm-12mm-10mm double insulated glazing; – Sealed awning or casement windows with minimum 6mm glass. • Up to 60% floor area ($R_w + C_{tr} \geq 31$): – Sealed awning or casement windows with minimum 6mm glass.	• Up to 40% floor area ($R_w + C_{tr} \geq 25$): – Sliding or double hung with minimum 6mm single or 6mm-12mm-6mm double insulated glazing; • Up to 60% floor area ($R_w + C_{tr} \geq 28$); • Up to 80% floor area ($R_w + C_{tr} \geq 31$).
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less or max % area increased by 20%.	
	Opposite	No specific requirements	
External Doors	Facing	• Fully glazed hinged door with certified $R_w + C_{tr} \geq 28$ rated door and frame including seals and 6mm glass.	• Doors to achieve $R_w + C_{tr} \geq 25$: – 35mm Solid timber core hinged door and frame system certified to R_w 28 including seals; – Glazed sliding door with 10mm glass and weather seals.
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less.	
	Opposite	No specific requirements	
External Walls	All	• $R_w + C_{tr} \geq 45$: – Two leaves of 90mm thick clay brick masonry with minimum 20mm cavity; or – Single leaf of 150mm brick masonry with 13mm cement render on each face; or – One row of 92mm studs at 600mm centres with: ▪ Resilient steel channels fixed to the outside of the studs; and ▪ 9.5mm hardboard or fibre cement sheeting or 11mm fibre cement weatherboards fixed to the outside; ▪ 75mm thick mineral wool insulation with a density of at least 11kg/m^3; and ▪ 2 x 16mm fire-rated plasterboard to inside.	
Roofs and Ceilings	All	• $R_w + C_{tr} \geq 35$: • Concrete or terracotta tile or metal sheet roof with sarking and at least 10mm plasterboard.	
Outdoor Living Areas		At least one outdoor living area located on the opposite side of the building from the transport corridor or at least one ground level outdoor living area screened using a solid continuous fence or other structure of minimum 2 metres height above ground level.	

Quiet House Package B

59-62 dB $L_{Aeq(Day)}$ & 54-57 dB $L_{Aeq(Night)}$

Element	Orientation	Room	
		Bedroom	Indoor Living and Work Areas
External Glazing	Facing	• Up to 40% floor area ($R_w + C_{tr} \geq 31$): – Fixed sash, awning or casement with minimum 6mm glass or 6mm-12mm-6mm double insulated glazing. • Up to 60% floor area ($R_w + C_{tr} \geq 34$): – Fixed sash, awning or casement with minimum 10mm glass or 6mm-12mm-10mm double insulated glazing.	• Up to 40% floor area ($R_w + C_{tr} \geq 28$): – Sliding or double hung with 6mm-12mm-10mm double insulated glazing; – Sealed awning or casement windows with minimum 6mm glass. • Up to 60% floor area ($R_w + C_{tr} \geq 31$); • Up to 80% floor area ($R_w + C_{tr} \geq 34$).
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less or max % area increased by 20%.	
	Opposite	As above, except $R_w + C_{tr}$ values may be 6 dB less or max % area increased by 20%.	
External Doors	Facing	• Fully glazed hinged door with certified $R_w + C_{tr} \geq 31$ rated door and frame including seals and 10mm glass.	• Doors to achieve $R_w + C_{tr} \geq 28$: – 40mm Solid timber core hinged door and frame system certified to R_w 32 including seals; – Fully glazed hinged door with certified $R_w + C_{tr} \geq 28$ rated door and frame including seals and 6mm glass.
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less or max % area increased by 20%.	
	Opposite	As above, except $R_w + C_{tr}$ values may be 6 dB less or max % area increased by 20%.	
External Walls	All	• $R_w + C_{tr} \geq 50$: – Two leaves of 90mm thick clay brick masonry with minimum 50mm cavity between leaves and 25mm glasswool or polyester (24kg/m³). Resilient ties used where required to connect leaves. – Two leaves of 110mm clay brick masonry with minimum 50mm cavity between leaves and 25mm glasswool or polyester insulation (24kg/m³). – Single leaf of 220mm brick masonry with 13mm cement render on each face. – 150mm thick unlined concrete panel or 200mm thick concrete panel with one layer of 13mm plasterboard or 13mm cement render on each face. – Single leaf of 90mm clay brick masonry with: ▪ A row of 70mm x 35mm timber studs or 64mm steel studs at 600mm centres; ▪ A cavity of 25mm between leaves; ▪ 50mm glasswool or polyester insulation (11kg/m³) between studs; and ▪ One layer of 10mm plasterboard fixed to the inside face.	
Roofs and Ceilings	All	• $R_w + C_{tr} \geq 35$: – Concrete or terracotta tile or metal sheet roof with sarking and at least 10mm plasterboard ceiling with R3.0+ fibrous insulation.	
Outdoor Living Areas		At least one outdoor living area located on the opposite side of the building from the transport corridor or at least one ground level outdoor living area screened using a solid continuous fence or other structure of minimum 2.4 metres height above ground level.	

Quiet House Package C

63-66 dB $L_{Aeq(Day)}$ & 58-61 dB $L_{Aeq(Night)}$

Element	Orientation	Room	
		Bedroom	Indoor Living and Work Areas
External Glazing	Facing	• Up to 20% floor area ($R_w + C_{tr} \geq 31$): – Fixed sash, awning or casement with minimum 6mm glass or 6mm-12mm-6mm double insulated glazing. • Up to 40% floor area ($R_w + C_{tr} \geq 34$): – Fixed sash, awning or casement with minimum 10mm glass or 6mm-12mm-10mm double insulated glazing.	• Up to 40% floor area ($R_w + C_{tr} \geq 31$): – Fixed sash, awning or casement with minimum 6mm glass or 6mm-12mm-6mm double insulated glazing. • Up to 60% floor area ($R_w + C_{tr} \geq 34$): – Fixed sash, awning or casement with minimum 10mm glass or 6mm-12mm-10mm double insulated glazing.
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less or max % area increased by 20%.	
	Opposite	As above, except $R_w + C_{tr}$ values may be 6 dB less or max % area increased by 20%.	
External Doors	Facing	• Not recommended.	• Doors to achieve $R_w + C_{tr} \geq 30$: – Fully glazed hinged door with certified $R_w + C_{tr} \geq 31$ rated door and frame including seals and 10mm glass; – 40mm Solid timber core side hinged door, frame and seal system certified to R_w 32 including seals. Any glass inserts to be minimum 6mm.
	Side On	As above, except $R_w + C_{tr}$ values may be 3 dB less or max % area increased by 20%.	
	Opposite	As above, except $R_w + C_{tr}$ values may be 6 dB less or max % area increased by 20%.	
External Walls	All	• $R_w + C_{tr} \geq 50$: – Two leaves of 90mm thick clay brick masonry with minimum 50mm cavity between leaves and 25mm glasswool or polyester insulation (24kg/m³). Resilient ties used where required to connect leaves. – Two leaves of 110mm clay brick masonry with minimum 50mm cavity between leaves and 25mm glasswool or polyester insulation (24kg/m³). – Single leaf of 220mm brick masonry with 13mm cement render on each face. – 150mm thick unlined concrete panel or 200mm thick concrete panel with one layer of 13mm plasterboard or 13mm cement render on each face. – Single leaf of 90mm clay brick masonry with: ▪ A row of 70mm x 35mm timber studs or 64mm steel studs at 600mm centres; ▪ A cavity of 25mm between leaves; ▪ 50mm glasswool or polyester insulation (11kg/m³) between studs; and ▪ One layer of 10mm plasterboard fixed to the inside face.	
Roofs and Ceilings	All	• $R_w + C_{tr} \geq 40$: – Concrete or terracotta tile roof with sarking, or metal sheet roof with foil backed R2.0+ fibrous insulation between steel sheeting and roof battens; – R3.0+ insulation batts above ceiling; – 2 x 10mm plasterboard ceiling or 1 x 13mm sound-rated plasterboard affixed using steel furring channel to ceiling rafters.	
Outdoor Living Areas		At least one outdoor living area located on the opposite side of the building from the transport corridor or at least one ground level outdoor living area screened using a solid continuous fence or other structure of minimum 2.4 metres height above ground level.	

Mechanical Ventilation requirements

In implementing the acceptable treatment packages, fresh air requirements of the National Construction Code must be satisfied on the basis of windows closed. Whilst not the only solution, the most common is mechanical ventilation / air-conditioning is installed with the following considerations:

- Acoustically rated openings and ductwork to provide a minimum sound reduction performance of R_w 40 dB into sensitive spaces;
- Evaporative systems require attenuated ceiling air vents to allow closed windows;
- Refrigerant based systems need to be designed to achieve National Construction Code fresh air ventilation requirements;
- Openings such as eaves, vents and air inlets must be acoustically treated, closed or relocated to building sides facing away from the corridor where practicable.

Notification

Notifications on title advise prospective purchasers of the potential for noise impacts from major transport corridors and help with managing expectations.

The Notification is to state as follows:

This lot is in the vicinity of a transport corridor and is affected, or may in the future be affected, by road and rail transport noise. Road and rail transport noise levels may rise or fall over time depending on the type and volume of traffic.

Appendix B – Terminology

The following is an explanation of the terminology used throughout this report:

- **Decibel (dB)**

The decibel is the unit that describes the sound pressure levels of a noise source. It is a logarithmic scale referenced to the threshold of hearing.

- **A-Weighting**

An A-weighted noise level has been filtered in such a way as to represent the way in which the human ear perceives sound. This weighting reflects the fact that the human ear is not as sensitive to lower frequencies as it is to higher frequencies. An A-weighted sound level is described as L_A, dB.

- **L_{eq}**

The L_{eq} level represents the average noise energy during a measurement period.

- **L_1**

The L_1 level represents the noise level exceeded for 1 percent of the measurement period and is considered to represent the average of the maximum noise levels measured.

- **L_{10}**

The L_{10} level represents the noise level exceeded for 10 percent of the measurement period and is considered to represent the "intrusive" noise level.

- **L_{90}**

The L_{90} level represents the noise level exceeded for 90 percent of the measurement period and is considered to represent the "background" noise level.

- **$L_{Aeq(Day)}$**

The $L_{Aeq(Day)}$ level is the logarithmic average of the L_{Aeq} levels from 6.00am to 10.00pm.

- **$L_{Aeq(Night)}$**

The $L_{Aeq(Night)}$ level is the logarithmic average of the L_{Aeq} levels from 10.00pm to 6.00am.

- **$L_{A10,18hour}$**

The $L_{A10,18hour}$ level is the arithmetic average of the hourly L_{A10} levels between 6.00am and midnight.

- **$L_{Aeq,24hour}$**

The $L_{Aeq,24hour}$ level is the logarithmic average of the L_{Aeq} levels from over an entire day.

- **Noise-sensitive land use and/or development**

Land-uses or development occupied or designed for occupation or use for residential purposes (including dwellings, residential buildings or short-stay accommodation), caravan park, camping ground, educational establishment, child care premises, hospital, nursing home, corrective institution or place of worship.

- **R_w**

This is the weighted sound reduction index. It is a single number rating determined by moving a grading curve in integral steps against the laboratory measured transmission loss until the sum of the deficiencies at each one-third-octave band, between 100 Hz and 3.15 kHz, does not exceed 32 dB. The higher the R_w value, the better the acoustic performance.

- **C_{tr}**

This is a spectrum adaptation term for airborne noise and provides a correction to the R_w value to suit source sounds with significant low frequency content such as road traffic or home theatre systems. A wall that provides a relatively high level of low frequency attenuation (i.e. masonry) may have a value in the order of – 4 dB, whilst a wall with relatively poor attenuation at low frequencies (i.e. stud wall) may have a value in the order of -12 dB.

- **About the Term 'Reasonable'**

An assessment of reasonableness should demonstrate that efforts have been made to resolve conflicts without comprising on the need to protect noise-sensitive land-use activities. For example, have reasonable efforts been made to design, relocate or vegetate a proposed noise barrier to address community concerns about the noise barrier height? Whether a noise mitigation measure is reasonable might include consideration of:

- The noise reduction benefit provided;
- The number of people protected;
- The relative cost vs benefit of mitigation;
- Road conditions (speed and road surface) significantly differ from noise forecast table assumptions;
- Existing and future noise levels, including changes in noise levels;
- Aesthetic amenity and visual impacts;
- Compatibility with other planning policies;
- Differences between metropolitan and regional situations and whether noise modelling requirements reflect the true nature of transport movements;
- Ability and cost for mobilisation and retrieval of noise monitoring equipment in regional areas;
- Differences between Greenfield and infill development;
- Differences between freight routes and public transport routes and urban corridors;
- The impact on the operational capacity of freight routes;
- The benefits arising from the proposed development;
- Existing or planned strategies to mitigate the noise at source.

- **About the Term 'Practicable'**

'Practicable' considerations for the purposes of the policy normally relate to the engineering aspects of the noise mitigation measures under evaluation. It is defined as "reasonably practicable having regard to, among other things, local conditions and circumstances (including costs) and to the current state of technical knowledge" (*Environmental Protection Act 1986*). These may include:

- Limitations of the different mitigation measures to reduce transport noise;
- Competing planning policies and strategies;
- Safety issues (such as impact on crash zones or restrictions on road vision);
- Topography and site constraints (such as space limitations);
- Engineering and drainage requirements;
- Access requirements (for driveways, pedestrian access and the like);
- Maintenance requirements;
- Bushfire resistance or BAL ratings;
- Suitability of the building for acoustic treatments.

Disclaimer

This document is published in accordance with and subject to an agreement between Hyd2o and the Client for whom it has been prepared, and is restricted to those issues that have been raised by the Client in its engagement of Hyd2o. It has been prepared using the skill and care ordinarily exercised by hydrologists in the preparation of such documents.

Hyd2o recognise site conditions change and contain varying degrees of non-uniformity that cannot be fully defined by field investigation. Measurements and values obtained from sampling and testing in this document are indicative within a limited timeframe, and unless otherwise specified, should not be accepted as conditions on site beyond that timeframe.

Any person or organisation that relies on or uses the document for purposes or reasons other than those agreed by Hyd2o and the Client does so entirely at their own risk. Hyd2o denies all liability in tort, contract or otherwise for any loss, damage or injury of any kind whatsoever (whether in negligence or otherwise) that may be suffered as a consequence of relying on this document for any purpose other than that agreed with the Client.

Executive Summary

Hyd2o was commissioned by Satterley to prepare this Local Water Management Strategy (LWMS) in support of the proposed local structure plan for East Wanneroo Precinct 3 (herein referred to as the site).

The site is located approximately 20 km north of Perth City Centre within the City of Wanneroo. The site has an approximate area of 136 ha and is bound by rural residential areas to the north and south, Lenore Road and residential lots to the west, with market gardens, rural residential lots, pony clubs, and a racing circuit (Nanovich Park) to the east.

The local structure plan for the site was prepared by Burgess Design Group and will consist of residential lots, associated roads, school, local centre, public open space with stormwater management areas, and retained bushland. The site includes a total of 28 ha of POS/parkland reserve area comprising over 20% of the total site to retain existing areas of Marri/Jarrah and Banksia Woodland.

The site is characterised as rural with market gardens since the early 1970's. Topographically the site is undulating with elevations ranging from approximately 84 mAHD to 55 mAHD, with sandy permeable soils. Groundwater mapping based on local data indicates groundwater flow as to the south west with levels a minimum of 9m below natural surface in low lying areas of the site, ranging to in excess of 40m in elevated areas. The site is considered a Low Risk Classification for development based on Local Planning Policy 4.4 (City of Wanneroo, 2020).

The LWMS considers the overarching East Wanneroo District Structure Plan District Water Management Strategy (Urbaqua, 2021) and its requirements. It is important to note however that the site is different to most of the East Wanneroo District Structure Plan Area and is unconstrained hydrologically, particularly with regards to future groundwater rise considerations and arterial drainage planning and implementation needs to support its development. Given the depth to groundwater and permeable sandy soils in the area, all stormwater within the site can and will be locally managed and infiltrated within Precinct 3.

The LWMS has been prepared in accordance with the principles, objectives, and key criteria of Better Urban Water Management (Western Australian Planning Commission, 2008) and considered other key publications including City of Wanneroo guidelines in developing its approach.

Implementation of the strategy will be undertaken in accordance with Better Urban Water Management through the development and implementation of Urban Water Management Plans for individual stages of development within the site.

Local Water Management Strategy Summary

Strategy Elements	LWMS Method & Approach
Water Use Sustainability	
Water Efficiency	• Use of water efficient fixtures and fittings. • Use of native plantings in POS / stormwater management areas. • Maximise infiltration of stormwater at source. • Retention of Bushland and native vegetation POS areas.
Water Supply	• Water Corporation IWSS for lots with rainwater tanks optional. • POS Irrigation via Superficial Aquifer and existing licences. • No long-term irrigation of conservation areas/Public Open Space.
Wastewater	• Water Corporation reticulated sewerage.
Stormwater	
Ecological Protection/ Water Quality (15 mm Event)	• Implement both structural and non-structural controls. • Use of soakwells at lot scale to retain 15mm on site. • Local centre to retain all stormwater on site up to 1% AEP event. • Total storage volume of 3684 m³ and area of 1.23 ha required for biofiltration systems to treat and infiltrate 15mm events, representing approximately 0.9 % of total site area. • Local scale street scale measures to be detailed at UWMP stage in consultation the City of Wanneroo and project civil engineers.
Serviceability (20% Annual Exceedance Probability Event)	• Road drainage system designed so roads will be passable in the 20% AEP event. • The total area required for management of the 20% AEP event is approximately 1.86 ha or 1.4% of the total site area with a total detention storage volume of approximately 6909 m³.
Flood Protection (1% Annual Exceedance Probability Event)	• Provide flood paths for overland flows which exceed the capacity of piped drainage. • Establish minimum habitable floor levels at 0.3 m above the 1% AEP event flood level in local drainage network. • The total area within the site required for flood storage up to the 1% AEP event is approximately 2.53 ha or 1.9% of the total site area, with a total detention storage volume of approximately 22103 m³. • Establish minimum habitable floor levels at 0.5m above the 1% AEP event flood level of stormwater storage areas.
Groundwater	
Fill & Subsoil Drainage	• Natural surface in excess of 9m above existing groundwater. • No subsoil required and site unaffected by potential future groundwater rise in Urbaqua(2021). • Earthworks for the site will comprise a cut and fill operation. Some fill may be required to meet gradient requirements, level lots, and interface with existing site boundaries and infrastructure.
ASS & Contamination	• No known risk of Contamination and ASS.

1 Introduction

Hyd2o was commissioned by Satterley to prepare this Local Water Management Strategy (LWMS) in support of the proposed local structure plan for East Wanneroo Precinct 3 (herein referred to as the site).

The site is located approximately 20 km north of Perth City Centre within the City of Wanneroo (Figure 1). The site has an approximate area of 136 ha and is bound by rural residential areas to the north and south, Lenore Road and residential lots to the west, with market gardens, rural residential lots, pony clubs, and a racing circuit (Nanovich Park) to the east.

The local structure plan for the site prepared by Burgess Design Group is included as Figure 2. The proposed development will consist of residential lots, associated roads, school, local centre, public open space with stormwater management areas, and retained bushland.

This LWMS details the outcomes of site specific analysis relating to groundwater and surface water investigations, and provides an assessment of the pre-development environment, development of water use sustainability initiatives, a stormwater management strategy, a groundwater management strategy and a plan for implementation. It provides a total water cycle management approach to development and has been prepared with consideration of the overarching East Wanneroo District Structure Plan District Water Management Strategy (Urbaqua, 2021) and its requirements.

This LWMS has been prepared in accordance with the principles, objectives, and key criteria of Better Urban Water Management (Western Australian Planning Commission, 2008) and considered other key publications including council guidelines in developing its approach. Implementation of the strategy will be undertaken in accordance with Better Urban Water Management through the development and implementation of Urban Water Management Plans for individual stages of development within the site.

A copy of the Better Urban Water Management (WAPC, 2008) LWMS Checklist for Developers is included as Appendix A to assist the Department of Water and Environmental Regulation (DWER) and City of Wanneroo (CoW) in review of this document.

1.1 Planning Background

The site is currently zoned 'Urban Deferred' and 'Rural' under the Metropolitan Region Scheme and zoned as 'Rural' under the City of Wanneroo District Planning Scheme No. 2.

The site is located within the East Wanneroo District Structure Plan Area for which a DWMS was previously prepared by Urbaqua (2021).

It is important to note that the site is different to many areas of the East Wanneroo District Structure Plan Area and is unconstrained hydrologically, particularly with regards to future groundwater rise considerations and arterial drainage planning and implementation needs to support development.

The urban water management planning process for the site is shown in Table 1.

This LWMS supports the proposed local structure plan for the site.

Table 1: Integrated Planning and Urban Water Management Process

District	District Structure Plan	East Wanneroo District Water Management Strategy (Urbaqua 2021)
Local	Local Structure Plan	East Wanneroo Precinct 3 Local Water Management Strategy **THIS DOCUMENT**
Subdivision	Subdivision Application	Urban Water Management Plan (for individual subdivision applications) **FUTURE PREPARATION**

1.2 Key Documents and Previous Studies

This LWMS uses the following key water management planning documents to define its principles, criteria, and objectives:

- East Wanneroo District Structure Plan District Water Management Strategy (Urbaqua, 2021)
- Stormwater Management Manual for WA (Department of Water and Environmental Regulation, 2022)
- Local Planning Policy 4.4: Urban Water Management (City of Wanneroo, 2020).
- Local Planning Policy 4.3: Public Open Space (City of Wanneroo, 2021).
- Stormwater Drainage Design Guidelines WD5 (City of Wanneroo, 2019)
- Decision Process for Stormwater Management in WA (Department of Water, 2017)
- Better Urban Water Management (WAPC, 2008)

2 Proposed Development

The structure plan for the site is shown in Figure 2. Consideration of the predevelopment environment of the site and existing constraints has guided the development of the plan.

The proposed development consists of residential lots, road reserves, public open spaces, parkland reserves, a local centre, primary school, and grouped dwellings. The proposed average lot size is approximately 400 m^2.

The site includes approximately 26 ha of POS and parkland reserve areas, well above typical 10% POS requirements to retain Bush Forever areas and Marri/Jarrah and Banskia Woodlands.

The site will create multiple use areas with POS for stormwater management at the existing natural low-lying areas of the site.

Details of the sizing of the stormwater management areas are presented in Section 6.

3 Pre-Development Environment

3.1 Site Conditions

A site conditions plan is included as Figure 3, showing an aerial view of the site and its surrounding area.

The existing site is characterised by rural properties with mainly horticultural use, and pockets of Marri/Jarrah and Banksia Woodland remnant vegetation. Horticultural use has been prevalent within the site since the 1970's.

Topography is characterised as undulating and ranges from approximately 84 mAHD near the southwestern corner to 55 mAHD in the upper-middle low lying area of the site.

Climate in the region is defined as Mediterranean, experiencing warm dry summers and cool wet winters. Mean annual rainfall for the site over the period 1964-2024 is 737 mm/yr (BoM station: Wanneroo 009105), with the majority rainfall occurring in the winter months from May to September.

Evaporation predominantly exceeds rainfall, except for the wettest months.

3.2 Geotechnical

Environmental geology mapping on the Perth Metropolitan Region Sheet 2034 II and part 2034 III and 2134 III (Gozzard, 1986) is shown in Figure 4.

The site is characterised as mainly:

- S7 – SAND – Pale and olive yellow, medium to coarse grained, sub angular to sub rounded quartz, trace of feldspar, moderated sorted, of residual origin.

with a very minor area (<0.1% of site area) of

- Cps - PEATY CLAY - dark grey and black soft variable organic content some quartz sand in places of lacustrine origin.

This S7 classification extends over a very wide area around the site also indicating relatively consistent soil conditions across the broader region.

S7 is sand derived from Tamala Limestone (Qts) and is classified as having good permeability and considerable depth to groundwater (Gozzard,1986).

Lithological logs from groundwater bores installed by Hyd2o show fine to medium grained sand across the three bores drilled at the site. Lithological logs are included as Appendix B.

Due to fragmented land ownership, additional geotechnical investigations will be undertaken at UWMP stage to inform detailed design.

3.3 Acid Sulphate Soils

Acid Sulphate Soil (ASS) mapping in the vicinity of the site is shown in Figure 4.

Almost the whole site is classified as no known risk of ASS, with only a very minor portion (~1100 m^2, <0.1% of site area) having a high to moderate risk in the northeastern corner of the site.

3.4 Contaminated Sites

A search of the Department of Water and Environmental Regulation's Contaminated Sites database indicates no known contaminated areas within the site or within a 2 km radius of its boundary.

3.5 Wetlands

An environmental plan is included as Figure 5. According to Department of Environment and Conservation's (DEC's) Geomorphic Wetlands of the Swan Coastal Plain dataset, there are no mapped wetlands located within the site.

The nearest conservation category wetland is located approximately 600m south west of the site, with Lake Jandabup located 950m to the north east.

3.6 Surface Water

There are no defined waterways, watercourses, or drains within the site, and no external catchments drain into the site. All rainfall and surface runoff currently infiltrates through the sandy subsurface profile. Even in major events any diffuse overland flow which may occur in localised areas would be infiltrated on site.

The Urbaqua (2021) East Wanneroo DWMS Extracts provides stormwater management details and high level arterial drainage planning for the East Wanneroo area.

Extracts from the document relevant to the site are contained as Appendix C and summarised in Figure 6. A total storage volume of 22,800 m^3 for Precinct 3 is estimated in Urbaqua (2021) post development.

It is not clear however in the DWMS why large scale transfer of flow (3-4 m^3/s) across Precinct boundaries in this area is required, particularly given permeable sandy soils are present, a high clearance to groundwater exists, and considering this does not represent the predevelopment condition or existing hydrological behaviour. Urbaqua (2021) precinct transfer locations of flows are shown in Figure 6 and Appendix C.

Various agencies (DWER, DPLH, Urbaqua) have been unable to provide any clarification on this matter during the development of this DWMS. The DWMS therefore considers that given sandy soils and high clearance to groundwater that stormwater can be managed and infiltrated onsite up to the 1% AEP event, and operate fully independently of other precincts and without any cross boundary transfers in or out of the precinct being required.

This approach is consistent with best practice for stormwater management.

3.7 Groundwater

3.7.1 Groundwater Levels

In mid 2023, DWER revised the groundwater information reported on their Perth Groundwater Map (online) to report the Gnangara Jandakot maximum and minimum water table contours for 2019. Advice from DWER indicates these revised contours account for the declines and rises in water tables in recent decades and the impacts of current climate trends. These contours are understood to be based on the contouring of the actual recorded maximum and minimum groundwater levels at DWER bores in 2019.

Based on this dataset the 2019 maximum groundwater levels across the site ranged between 40.0 mAHD and 42.0 mAHD, with flow to the south west.

Hyd2o conducted a monthly groundwater level monitoring program from September 2022 through to November 2023 at the three site bores and four DWER bores. A summary of recorded water levels for the monitoring program are shown in Table 3 and Appendix D.

Minimum groundwater levels for the site bores were recorded mainly in March 2022 and ranged from 40.78 mAHD at EW02 to 41.40 mAHD at EW03. Maximum groundwater levels were recorded mainly in October 2022 ranging from 41.23 mAHD at EW02 to 42.13 mAHD at EW03. Maximum recorded levels during this period are shown on Table 3.

Groundwater flow across the site is in a south westerly direction, towards the western site boundary similar to DWER mapping.

DWER long-term hydrographs are included in Appendix E. DWER bores show a historical (2000 – 2023) annual seasonal variations of between 0.1 m – 0.6 m at WM22, between 0.2 m – 0.7 m at JP5B, between 0.1 m – 0.7 m at JB4, and between 0.2 m – 0.8 m at bore WM42.

The long-term hydrographs show a general declining trend in groundwater levels prior to 2000 with increasing levels in recent times. The maximum recorded groundwater levels during the 2022-2023 monitoring period at all DWER bores exceeded their respective AAMGL's for the period since 2000 ranging from 0.29 m to 0.47m above the AAMGL.

Given these results and the predicted future groundwater level rise in the area with development (Urbaqua, 2021) calculation of a historical AAMGL is not considered appropriate for the site to inform development.

Figure 7 therefore contours the maximum groundwater level (MGL) for the 2022-2023 monitoring period and notes the minimum clearance to these groundwater levels from natural surface in the site as approximately 9m in the north-eastern corner. Areas of the site are elevated more than 40m above regional groundwater

Given these clearances, the site will not be adversely affected by any predicted rise of groundwater levels as a result of land use change within the East Wanneroo District Structure Plan area (Urbaqua, 2021).

Table 3: Groundwater Level Summary

* AAMGL calculated based on DWER bores from 2000-2023

3.7.2 Groundwater Quality

Groundwater quality samples were taken from three site bores (EW01, EW02 and EW03) and one DWER bore (WM42) on five occasions across the predevelopment monitoring period. Groundwater quality results are summarised in Table 4 with detailed results and laboratory reports provided in Appendices F and G. Results are evaluated against ANZECC (2000) guidelines for highly coloured wetland ecosystems in South-west Australia and 95% level of protection for freshwater species.

Key results are summarised as follows:

- Mean EC was recorded as 0.516 mS/cm at EW01, 1.561 mS/cm at EW02, 0.343 mS/cm at EW03, and 1.156 mS/cm at WM42, remaining within ANZECC guidelines (0.300 - 1.500 mS/cm), apart from bore EW02 which slightly exceeded the trigger level.
- Mean pH was recorded as 6.11, 5.24, 6.65 and 6.52, at EW01, EW02, EW03 and WM42 respectively. This indicates groundwater across the site is slightly acidic and within the ANZECC (2000) guideline range of 4.50 - 6.50 pH, apart from bores EW03 and WM42 which are marginally above.
- Mean TN exceeded the ANZECC guidelines (1.5 mg/L) at bores EW02 and EW03. EW01, EW02, EW03 and WM42 were recorded as 0.93 mg/L, 100.40 mg/L, 2.32 mg/L, and 0.94 mg/L respectively. Historical land use is the likely cause of elevated readings at EW02, with historical aerial photographs from Landgate showing horticultural activity around bore EW02 dating back to the early 1970's.
- Mean NOx-N (mg/L) exceeded the ANZECC guideline of 0.1 mg/L at all bores, recording levels at bores EW01, EW02, EW03 and WM42 as 0.55 mg/L, 77.60 mg/L, 1.96 mg/L and 0.68 mg/L, respectively.
- Mean TP remained within the 0.060 mg/L ANZECC guideline at all bores, recording values below the laboratory detectable limit of 0.050 mg/L at all bores on all sampling occasions.
- Mean FRP remained within the ANZECC guideline of 0.03 mg/L at all bores, recording 0.006 mg/L at EW01, 0.005 mg/L at EW02, 0.005 mg/L at EW03, and 0.011 mg/L at WM42.
- Dissolved metals were within the ANZECC guideline trigger values, apart from Zn which exceeded the established 0.008 mg/L criteria at bores EW01, EW02 and WM42 recording mean Zn values of 0.01 mg/L, 0.049 mg/L and 0.019 mg/L, and for Cu which slightly exceeded the ANZECC trigger value of 0.0014 mg/L at bores EW01 (0.0015 mg/L) and EW02 (0.0023 mg/L).
- E.coli was recorded below detectable laboratory limit in all sampling occasions regarding all site bores and WM42.

Table 4: Groundwater Quality Summary

Parameter	ANZECC Guidelines (2000)	EW01 (mean)	EW02 (mean)	EW03 (mean)	WM42 (mean)
EC (mS/cm)	0.300 - 1.500[1]	0.516	1.561	0.343	1.156

2. Trigger values for 95th percentile protection of freshwater species.

4 Design Criteria

Key design criteria for the site are shown in Table 5 and have been established consistent with criteria specified in the key reference documents previously detailed in Section 1.3. These design criteria are used in Sections 5, 6 and 7 together with the identified constraints and opportunities of the predevelopment environment (Section 3) to establish the water management strategy for the site.

Table 5: Key Urban Water Management Design Objectives

Water Supply	
Water Efficiency	• Use higher density residential zonings to reduce ex-house use. • Consumption target for water of 100 kL/person/yr. • Water efficient fixtures and fittings. • Retention of Bushland vegetation and use of native plantings in POS.
Water Supply	• Water Corporation IWSS for lots, rainwater tanks. • Groundwater for POS irrigation. • Minimise use of scheme water for non-drinking purposes.
Wastewater	• Water Corporation reticulated sewerage.
Stormwater	
Small Event (15mm Event)	• Use of soakwells at lot scale to infiltrate first 15mm on site. • Biofiltration areas for management and treatment of first 15mm road runoff within POS • Bottomless manholes within road reserves (subject to City of Wanneroo acceptance)
Serviceability (20% AEP Event)	• Piped drainage system sized to convey 20 % AEP event. • 20% AEP event for local stormwater managed and retained within multiple use POS areas.
Flood Protection (1% AEP Event)	• Overland flow paths within road reserves identified for safe conveyance of flows exceeding pipe drainage system capacity. • Minimum habitable floor levels shall be a minimum of 0.3 m above the % AEP storm event flood level in local drainage networks. • 1% AEP event for local stormwater to be all retained and infiltrated on site in POS areas. • Minimum habitable floor levels shall be a minimum of 0.5 m above the 1% AEP storm event in stormwater storage areas. • Local centre to manage up to 1% AEP event on site. • All stormwater to be infiltrated within 96 hrs to prevent mosquito and midge breeding.
Groundwater	
Fill & Subsoil	• Earthworks for the site will comprise a cut and fill operation required to meet gradient requirements, level lots, and interface with existing site boundaries and infrastructure
Acid Sulphate Soils	• Acid sulphate soils to be investigated as a separate process (if required) and reported at later stages of planning.
Implementation	
Process	• Future stages of planning to be consistent with BUWM (WAPC, 2008) requirements. • Post development monitoring to review system performance.

5 Water Use Sustainability Initiatives

5.1 Water Efficiency Measures

Development of the site will lead to an increased demand of potable water for residential use and irrigation of gardens and POS/drainage areas.

Water conservation measures implemented to reduce scheme water consumption within the development will be consistent with Water Corporation's "Waterwise" land development criteria including:

- Promotion of use of waterwise practices including water efficient fixtures and fittings (taps, showerheads, toilets, rainwater tanks, waterwise landscaping).
- Retention of vegetation and bushland areas
- Use of native plants in POS and drainage landscaped area.
- Maximising on site retention of stormwater.

Local aquifer water use is expected to reduce significantly within the site as a result of the change from horticultural land use to urban development.

5.2 Water Supply

Potable water supply to future homes in the site will be via the Water Corporation Integrated Water Supply System (IWSS). Rainwater tanks have been identified as a non-potable source to be integrated as part of the domestic water supply scheme to assist in reducing stormwater generation and minimise scheme water importation.

The site is located within the Wanneroo groundwater management area (GMA) Lake Gnangara Sub Area. DWER's online Water Register for Licence and Water Availability Information indicates that the superficial aquifer is fully allocated within this sub area and therefore further water is not available to be allocated for irrigation purposes. Deeper Leederville and Yaragadee aquifers are also fully allocated.

Based on the DWER's online Water Register, there are seventeen existing licence allocations within the site, totalling 469,588 kL/yr as shown in Table 5. Individual licence details are contained in Appendix H. Licences will be retained within the site to support future development and POS irrigation.

The subdivision application area contains 12.0 ha of active POS inclusive of a playing field and a further 14.3 ha of parkland conservation area (Figure 2). An estimate of the amount of groundwater required for POS irrigation is calculated based on a 12.0 ha POS irrigation area, and assuming an irrigation rate of 6,750 kL/ha/annum. The estimated 81,000 kL/yr required represents only 17% of current allocation within the site.

Indicative landscape concept plans prepared by Emerge Associates are contained as Appendix I. Stormwater management areas will be integrated in POS with landscaped biofiltration and infiltration storage areas for up to the 1% AEP event. Details of calculations for stormwater volumes used to inform landscape planning are contained in Section 6.

Table 5: Groundwater Resource and Licenced Allocation

Groundwater Area	Subarea	Aquifer	Licence	Allocation (kl/yr)	Water Availability
Wanneroo	Lake Gnangara	Superficial	53795	3,500	Fully Allocated
			96251	12,950	
			71191	49,500	
			169281	42,008	
			76456	4,150	
			107897	10,270	
			153256	9,815	
			203361	57,650	
			207394	60,000	
			98646	48,650	
			152615	43,400	
			66050	5,000	
			76617	49,950	
			71195	48,600	
			63494	12,575	
			95232	5,150	
			168640	6,420	
			Total : 469,588 kl/yr		

Further refinement and provision of landscape design plans will occur in consultation with the City of Wanneroo at UWMP stage prior to POS construction as engineering and landscape detailed design is progressed. Detailed landscape plans and engineering for POS will be provided to the CoW for approval during the detailed planning phase of POS.

Groundwater licences to support POS irrigation within the site will be ultimately transferred to the City of Wanneroo upon handover of POS areas.

5.3 Wastewater Management

Wastewater will be deep sewerage (reticulated) with management by the Water Corporation.

6 Stormwater Management Strategy

Stormwater management is proposed to be undertaken consistent with DWER water sensitive design practices, via a combination of lot soakwells and street scale infiltration, and biofiltration areas and multiple use flood storage areas within POS to capture and infiltrate all events on site up to the 1% AEP event. With respect to additional local scale street scale measures, these will be detailed and designed at UWMP stage in consultation the City of Wanneroo and project civil engineers.

The overall key components of stormwater management of the site are as follows :

- Land use types and densities to considerably reduce nutrient application and export relative to existing land use
- Lots to have soakwells/on-site systems to provide 15mm infiltration of stormwater at source.
- Road runoff to be conveyed using piped drainage, with bottomless manholes used (subject to CoW approval) to reduce bottom end infrastructure requirements.
- Treatment of road runoff within each catchment via specified biofiltration areas for water quality, with POS areas designed to be occasionally inundated for flood management in major events.

The site (Precinct 3) has been designed to be self contained in terms of stormwater management with no cross precinct flows in and out across precinct boundaries. Given its sandy soils and depth to groundwater it is not considered to require any regional stormwater infrastructure to facilitate its development.

6.1 Stormwater Modelling

Stormwater modelling for the site was performed using XP-Storm to determine stormwater flood storage requirements. The design storms modelled by XP-Storm were based on methodology in Australian Rainfall & Runoff (AR&R) and the Bureau of Meteorology Computerised Design IFD Rainfall System. The rainfall temporal pattern was assumed to be spatially uniform across the catchment. Storms modelled ranged from 30 mins to 72 hrs.

The following key parameters were used for modelling:

- Seven catchments based on existing topography and POS area locations determined in consultation with project engineering Cossill & Webley (Figure 8).
- 1:0 side slopes for biofiltration areas to a maximum depth of 0.3 m.
- Minimum side slopes of 1 in 6 for minor/major event flood storage.
- Maximum storage depth of 1.2 m (1% AEP Event).
- A saturated hydraulic conductivity of 5 m/day for modelling purposes.

Various runoff coefficients applied to different land uses for each of the events modelled are shown in Table 6. These have been determined using Hyd2o's CURRV runoff rate calculator with detailed calculations included as Appendix J. Hyd2o's CURRV runoff calculator is a standardised approach used by Hyd2o across all development projects to

estimate runoff rates. In estimating runoff rates CURRV considers rainfall IFD's, land use breakdown, percentages of impervious and pervious areas within land use type and likely initial and continuing loss of soil types. It is assumed all residential lots will have soakwells sized to retain a 15 mm event on site, and the local centre will be required to manage all events up to the 1% AEP on site.

Modelling results for the POS storages are provided in Table 6 and Figure 8, with modelling outputs shown in Appendix K. Note that storage shapes shown in Figure 8 are indicative only for determination of POS area requirements in the local structure plan. Landscape plans in Appendix I should be referenced for more detailed information regarding the integration of required storage volumes within POS.

Final infiltration area configurations, locations, and elevations will be documented in future UWMPs and will be dependent on final earthworks, drainage, and road design levels for the development. Tree retention will be a key factor in the final configurations adopted.

6.2 Major Event Flood Protection (1% AEP)

Modelled flood protection storage volumes, areas, and flood rises are detailed in Table 6 and Figure 8 which shows the extent of inundation of POS area for various flood management events. The total area within the site required for flood storage up to the 1% AEP event is approximately 2.53 ha or 1.9% of the total site area, with a total detention storage volume of approximately 25,265 m^3. This compares with 22,800 m^3 estimated for the Precinct in Urbaqua (2021).

The final storage area configuration (side slopes, treatments etc), location, and elevations will be documented in the UWMP and will be dependent on final earthworks, drainage, and road design levels for the development.

Refinements to catchment areas shown in this report may occur as detailed design proceeds, and stormwater modelling will be updated accordingly if required during the UWMP process. Opportunities for additional distributed storage and treatment throughout the site will also be reviewed at later stages of planning.

All building floor levels will comply with requirements for a 0.3 m clearance above the 100 year flood level within the street drainage system and 0.5 m above the flood level within stormwater storage areas.

6.3 Minor Event Serviceability (20% AEP)

Modelled storage volumes, areas, flood rise and inverts are detailed in Table 6 and Figure 8 for the 20% AEP flood event, showing the extent of inundation of POS area.

The total area required for the 20% AEP event is approximately 1.86 ha or 1.4% of the total site area with a total detention storage volume of approximately 6909 m^3. This compares with 7,500 m^3 estimated for the Precinct in Urbaqua (2021).

Table 6: Stormwater Modelling Summary

6.4 Small Event Water Quality Treatment(15mm)

This LWMS proposes a treatment train approach to water quality management which includes non- structural as well as structural controls:

- **Non-Structural Controls**
  Planning: Lot product and Sizing, POS and storage locations and configuration
  Landscape: Native plantings and Bushland Retention, WSUD integration
  Maintenance: Storage areas, street sweeping manhole eduction
  Monitoring: Post development program and performance review
- **Structural Controls**
  Catchment Scale Infrastructure: Bioretention areas
  Local Scale Infrastructure: Soakwells at lot scale, bottomless manholes with roads

Measures adopted represent known best management practice as detailed in the Stormwater Management Manual for Western Australia (DWER, 2022).

Storm volumes for ecological protection based on the 63% AEP (15mm) event are provided in Table 6 and Figure 8 to provide a guide for storage requirements and areas for water quality treatment consistent with DWER (2022) and DWER (2017).

The total area estimated for biofiltration is approximately 1.23 ha (volume 3684 m^3).

Table 7 details a summary from the Stormwater Management Manual for Western Australia (DWER, 2022) of expected pollutant removal efficiencies for various WSUD measures in relation to water quality design criteria. While DWER (2022) does not provide expected pollutant removal efficiencies for all BMP's, application of a treatment train approach using a combination of the non-structural and structural measures will achieve the design objectives for water quality as detailed in WAPC (2008).

Bioretention areas will be sized to retain treat and infiltrate 15mm in accordance with agency requirements. Biofiltration systems will be designed consistent with the Adoption Guidelines for Stormwater Biofiltration Systems (CRC for Water Sensitive Cities, 2015).

With respect to disease vector and nuisance insect management, modelling shows stormwater management areas will have a maximum duration for standing water following small events (<15mm) of less than 6 hours, well within WAPC (2008) requirement of 96 hours.

Table 7: BMP Water Quality Performance in Relation to Design Criteria

Parameter	Criteria via WAPC (2008) (removal as compared to a development with no WSUD)	Nutrient Output Reduction viq DWER (2022)	
		Bioretention Systems	Detention/ Retention Storages
Total Suspended Solids	80%	60-80%	65-99%
Total Phosphorus	60%	30-50%	40-80%
Total Nitrogen	45%	25-40%	50-70%
Gross Pollutants	70%	-	>90%

6.5 Nutrient Assessment

The UNDO (Urban Nutrient Decision Outcomes) model is a conceptual decision support tool developed by DWER that evaluates nutrient reduction decisions for urban developments on the Swan Coastal Plain. It is designed for ease-of-use by urban development proponents and for assessment by local and state government authorities.

The tool was developed to assess nutrient impacts of urban development on the Swan Coastal Plain in a consistent and scientifically rigorous manner. The tool is web-based and provides users with the ability to implement a range of structural and/or non-structural design options to evaluate and reduce nutrients exported from an urban development.

Modelling outputs of the site's existing land use using UNDO are detailed in Appendix M.

Modelling outputs of the site's existing (pre-development) land use indicate nutrient inputs of 10,245 kg/yr of TN and 1816 kg/yr of TP to the environment annually based on typical rural nutrient application rate estimates. The resultant nutrient export was 810 kg/yr of TN and 12.1 kg/yr of TP. These export estimate considers soil types, groundwater gradients, and depth to groundwater in their calculation. They do not however consider the impact of horticultural use which UNDO doesn't include. DoW's (2010) Survey of Urban Nutrient Inputs on the Swan Coastal Plain publication indicate application for horticultural use are likely to be far greater. Estimates for the existing land use are therefore likely to be considerably underestimated.

Post development UNDO modelling shows the positive impact land use change at the site will have with respect to nutrient application and export. The modelling results indicate land use change will result in nutrient inputs of 4,089 kg/yr for TN and 740 kg/yr TP post development. This indicates a 6,156 kg/yr (60%) reduction in TN input and 1076 kg/yr (59%) reduction in TP input annually.

The resultant nutrient export inclusive of the impact of implementing water sensitive urban design measures was 284 kg/yr of TN and 6.3 kg/yr export of TP following development. This represents a significant 65% reduction in TN export and a 48% reduction in TP export to the environment post development as a result of land use change.

As previously discussed, actual reductions are likely to be much higher than estimated given current horticultural use within the site.

7 Groundwater Management Strategy

As discussed in Section 3.7.1, existing groundwater levels at the site range from a minimum of approximately 9m below surface to in excess of 40m. Given this clearance, the site will not be adversely affected by any predicted rise of groundwater levels as a result of land use change within the East Wanneroo District Structure Plan area (Urbaqua, 2021).

Groundwater levels are therefore not considered a development constraint for the site.

Earthworks for the site will comprise a cut and fill operation required to meet gradient requirements, level lots, and interface with existing site boundaries and infrastructure.

Water quality aspects of groundwater management will be achieved via biofiltration areas in future POS areas to treat stormwater runoff prior to infiltration at source.

Final finished lot levels are a detailed design issue to be addressed during the preparation of detailed engineering design drawings and preparation of the UWMP and will be ultimately submitted for council approval at that stage.

7.1 Acid Sulphate Soils

As previously detailed in Section 3.2, published acid sulphate risk mapping shows almost the whole site as no known risk of ASS, with only a very minor portion (~1100 m^2, <0.1% of site area) having a high to moderate risk in the northeastern corner of the site.

Groundwater in the area of the high to moderate risk ASS is estimated to be approximately 9m below natural surface (Figure 7) and is therefore unlikely to be disturbed during construction.

Further examination of ASS risks if required will be evaluated during the sites geotechnical investigations. Should ASS be identified, management will be addressed as a separate study to the LWMS/UWMP process, however details regarding the outcomes will be included as part of the Urban Water Management Plan (UWMP).

All assessment and management of ASS will be conducted in accordance with the Acid Sulphate Soil Guideline Series documentation (Department of Environmental Regulation, 2015a & b).

8 Urban Water Management Plans

Consistent with processes defined in WAPC (2008), an Urban Water Management Plan (UWMP's) will be developed and submitted to support subdivision development of the site. Given the size of the site, it is considered likely several UWMP's will be required.

The UWMP will address:

- Demonstrated compliance with LWMS criteria and objectives to the satisfaction of the City of Wanneroo and DWER.
- Agreed measures to achieve water conservation and efficiencies of water use.
- Geotechnical investigations, including permeability testing at storage locations.
- Detailed stormwater management design including the refinement of sizes, locations and design of public open space areas, integrating water quality treatment areas, and major and minor flood management capability.
- Details landscape plans developed in consultation with the City of Wanneroo.
- Earthworks, cut/fill, and detailed drainage design plans.
- Specific structural and non-structural BMPs and treatment measures to be implemented including their function, location, maintenance requirements, expected performance and agreed ongoing management arrangements.
- Management of subdivisional works.
- Implementation plan including roles, responsibilities, funding and maintenance arrangements.
- Further specific monitoring at individual stage level and reporting to be undertaken consistent with the monitoring program defined in this LWMS.
- Contingency plans (where necessary).

More detail on stormwater storage integration with POS areas will be provided during the development of the UWMP, including refinement of stormwater modelling, preparation of landscape plans (species selection and treatments), and detailed engineering design drawings.

Preparation of the UWMP will be the responsibility of the developer.

9 Monitoring

9.1 Pre Development Monitoring

Groundwater monitoring to support urban development is typically required for sites where groundwater is close to natural surface (< 4 m).

Predevelopment monitoring for the site has been undertaken consistent with specified requirements of the Urbaqua (2021) district scale monitoring program, and completed across two peak winter periods demonstrating a minimum depth to groundwater of approximately 9m at the site, with depths ranging to more than 40m below natural surface.

Water quality parameters consistent with Urbaquq (2021) requirements were undertaken as detailed in Section 3.2.

No further predevelopment monitoring is considered to be required to inform development of the site.

9.2 Post Development Monitoring

Due to the substantial depth to groundwater across the site, a post development groundwater monitoring program is not proposed.

An alternative program which focusses on the performance of stormwater management measures to function and perform in accordance with design is considered more appropriate as detailed in Table 8.

The monitoring program is proposed to operate over a two year post development period to assess the overall performance of the stormwater storage areas. This period of post development monitoring is considered appropriate to assess the functioning of the surface water management system within individual development areas.

A standardised proforma will be used to assess performance against design intent. The proforma will consider processes such as vegetation health, scour, erosion, deposition, water levels, and retention periods of standing water in bioretention and flood storage areas.

Assessment of monitoring outcomes and system performance will be undertaken as part of the annual review and reporting process. Should the system not be functioning in accordance with design a contingency action plan will be implemented, including:

- Assessing if an isolated, development area or regional occurrence.
- Determining if due to the development or other external factors.
    a) Identify and remove any point sources causing problems.
    b) Review operational and maintenance practices.
    c) Consider alterations to POS areas and the stormwater system.
    d) Consider initiation of community based projects.
- If necessary, inform residents of any required works and their purpose.

The program may need to be modified as data is collected to increase or decrease the monitoring effort in a particular area or to alter the scope of the program itself.

Any modification to the program would be identified through review of the collected data and would require the agreement of the City of Wanneroo and the developer.

Table 8: Post Development Monitoring Program

Monitoring	Parameter	Location	Method	Frequency/Timing
Local stormwater	Performance assessment via proforma	Biofiltration & flood storage areas	Visual assessment	Monthly, typically between June to October (5 times per year) for 2 years

10 Implementation

Table 9 details the roles, responsibilities and funding to implement the LWMS.

Should the UWMP require any deviations to the strategy detailed in this LWMS, this will require the agreement of all parties (DWER, City of Wanneroo, and developer).

Details of construction and maintenance responsibilities will be appropriately detailed at UWMP stage. Operation and maintenance of the stormwater management system will initially be the developer's responsibility, ultimately reverting to the City following handover. Details of maintenance responsibilities will be further outlined at UWMP stage.

The schedule for maintenance works will be consistent with typical requirements of the City of Wanneroo for stormwater management.

APPENDIX C
Urbaqua (2021)
East Wanneroo DWMS Extracts

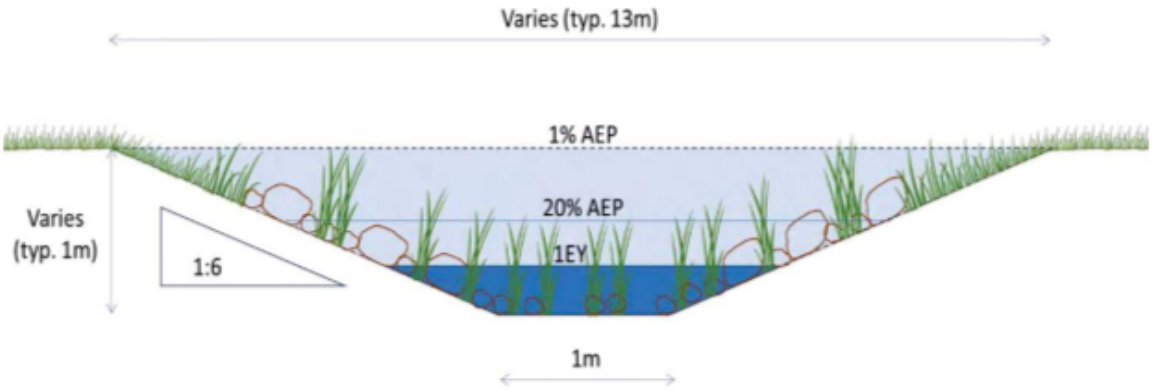

Figure 28: Modelled arterial drainage swale

Preliminary stormwater modelling indicates flows across precinct boundaries will be required in some locations, whilst others may be able to manage all minor (20%AEP) and major (1%AEP) events with their boundaries. Indicative peak flow rates across precinct boundaries are presented in Table 26. However, it will be necessary to undertake more detailed modelling to determine cross-boundary flows to be accommodated within precincts for reporting at the local structure planning (LWMS) stage. Controlled groundwater levels at each crossing locations are also provided in Table 26 and it is recommended that the invert levels of stormwater drainage systems are set at least 0.3m above the local controlled groundwater level.

Table 26: Indicative peak flows crossing precinct boundaries

Location (refer to Figures 32 to 51 in App. C)	Controlled groundwater level (mAHD)	20% AEP Peak flow (m^3/s)	1% AEP Peak flow (m^3/s)

23d	44.11	0.49	2.06
24a	49.29	0.25	1.01

Storage requirements

Preliminary stormwater modelling indicates that new infiltration or detention storages will be required in some precincts, whilst others may be able to manage all minor (20%AEP) and major (1%AEP) events with the capacity available in existing wetlands. Indicative volumes are provided for new storages in Table 27. However, it will be necessary to undertake more detailed modelling to determine storage volumes and locations to be accommodated within precincts for reporting at the local structure planning (LWMS) stage. Controlled groundwater levels are provided in Table 27 at the location of each storage and it is recommended that the inverts of stormwater storages are set at least 0.3m above the local controlled groundwater level.

Detailed surface water modelling will be required to support future local structure plans and presented in local water management strategies. This modelling will need to include consideration of the risks associated with surface and groundwater interaction both now and in the future. The establishment of appropriate antecedent conditions in drainage infiltration basins and wetlands functioning as part of the surface water management system will need to consider changing groundwater levels and the performance of subsurface drainage systems under flood conditions.

Table 27: Indicative constructed storage volumes

Location (refer to Figures 32 to 51 in App. C)	Controlled groundwater level (mAHD)	20% AEP Volume (m^3)	1% AEP Volume (m^3)

Where existing wetlands are proposed for integration with the arterial drainage system and/or will receive floodwaters during minor or major flood events it is important that the design of the system and its outlets is consistent with protection of wetland values. Guidance for the design of drainage system discharges at their interface with wetlands is provided in section 5.1.3.

Summary of precinct drainage system requirements

Table 28 provides a summary of stormwater and groundwater drainage system requirements for each precinct.

Table 28: Summary precinct drainage requirements

Precinct	Land Use Context	Wetlands	Stormwater management (Small rainfall events)	Stormwater management (Minor and Major rainfall events)	Groundwater management
P1	Residential area with access to regional reserves and wetland system	Little Badgerup Lake (CCW) is located in the eastern portion of the precinct.	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains four catchments. Part of this precinct drains into Little Badgerup Lake located in the east of the precinct, part drains to the north into Precinct 2 via two discharge locations and part drains offsite to the west and may require detention capacity of up to 5ML prior to discharge into the existing adjacent drainage system. The remainder, and largest part of this precinct drains into an infiltration basin located in the south of the precinct with a capacity of up to 15ML.	Approximately 17 hectares of the precinct may require groundwater management in future generating a potential flow rate of around 9L/s. A 24hour shutdown storage volume of 760m3 will need to be accommodated at three potential pump station locations.
P2	Low Density Residential area with access to regional reserves and wetland system	Badgerup Lake (CCW) is located in the eastern portion of the precinct.	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains two catchments. Runoff from Precinct 1 enters this precinct at 2 locations on the southern boundary. precincts. The majority of this precinct discharges into Badgerup Lake located partially within the precinct in the east. A very small portion of the precinct drains into a detention basin that may need to have capacity of up to 5ML located in the south west of the precinct prior to discharge offsite.	Approximately 27 hectares of the precinct may require groundwater management in future generating a potential flow rate of around 10L/s. A 24hour shutdown storage volume of 830m3 will need to be accommodated at one potential pump station location.
P3	Residential area. Access is available to regional reserves, however wetland system is some distance to the precinct boundary.	N/A	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains two catchments. Runoff from parts of Precinct 4 and Precinct 13 enters this precinct from the north and a portion of this Precinct drains into Precinct 12 to the east. The majority of this precinct drains to a centrally located infiltration basin with capacity of up to 26ML.	Groundwater management is not expected to be required in this precinct
P4	Residential area	N/A	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains three catchments. Runoff from part of this precinct drains into Precinct 3 via Precinct 13 precincts. A portion of the precinct in the west drains offsite and will require one or two detention basins of up to 5ML capacity each to protect the downstream system.	Approximately 8 hectares of the precinct may require groundwater management in future generating a potential flow rate of around 6L/s. A 24hour shutdown storage volume of 500m3 will need to be accommodated at one potential pump station location.
P5	Residential area bisected by road and rail corridor. Eastern section has access to regional reserves and wetland systems. Includes area of public purpose reserve (water supply tanks).	Lake Jandabup (CCW) is partially located in this precinct to the east.	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains three catchments. Runoff from the western side of this precinct drains into Precinct 6 to the north. The majority of runoff generated within this precinct drains into Lake Jandabup which is partially within the precinct in the east. The precinct is bisected by the proposed rail transit corridor and may require additional detention on the western side of the corridor prior to discharge.	Groundwater management is not expected to be required in this precinct
P6	Residential area including large park and recreation area in the centre. Access to Lake Mariginiup is available through reserve 46711.	Lake Jandabup (CCW) is partially located in this precinct to the east.	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains four catchments. The majority of the precinct drains to the north into Precinct 7 within a regional open space corridor prior to discharging into Mariginiup Lake located in Precinct 7. Most of the remaining precinct area drains to the east into Lake Jandabup located partially within the precinct. A very small portion of the precinct drains into a detention basin of up to 5ML capacity located in the south west of the precinct prior to discharge offsite.	Approximately 3 hectares of the precinct may require groundwater management in future generating a potential flow rate of less than 1L/s. A 24hour shutdown storage volume of 30m3 will need to be accommodated at one potential pump station location.
P7	Residential area bisected by road and rail corridor. Access to regional reserves and wetland systems is available both sides of the corridor.	Mariginiup Lake (CCW) is located in this precinct and a small portion of Lake Jandabup is also within the eastern portion of the precinct	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management systems are to be accommodated outside of retained wetlands and their buffers.	Contains two catchments. Runoff from Precinct 6 enters this precinct from the south and a small portion of Precinct 15 from the north east. The majority of the precinct drains into Mariginiup Lake which is located partially within the precinct. A small portion of the precinct area to the east of the proposed rail transit corridor drains into Lake Jandabup located partially within the precinct.	Groundwater management is not expected to be required in this precinct
P8	Residential area with access to regional reserves and wetland system	The northern portion of Mariginiup Lake (CCW) and the whole of Little Mariginiup	Small rainfall events are to be managed at source (in lots and streets) wherever possible. All small event stormwater management	Contains two catchments. Runoff from portions of Precinct 15 enters this precinct from the east at two locations. The majority of the precinct drains into Mariginiup Lake which is	Approximately 50 hectares of the precinct may require groundwater management in future generating a potential flow rate of around

Certificate of Analysis PDJ1431

Client Details

Client	Hyd2O
Contact	Brian Lau
Address	Suite 6B, 103 Rokeby Rd, SUBIACO, WA, 6008

Sample Details

Your Reference	H21064 East Wanneroo Monitoring
Number of Samples	4 Groundwater
Date Samples Received	25/10/2022
Date Samples Registered	25/10/2022

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.
Samples were analysed as received from the client. Results relate specifically to the samples as received.
Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date Results Requested by	01/11/2022
Date of Issue	01/11/2022

NATA Accreditation Number 2901. This document shall not be reproduced except in full.
Accredited for compliance with ISO/IEC 17025. Tests not covered by NATA are denoted with *.

Authorisation Details

Results Approved By	Heram Halim, Operations Manager Michael Hall, Inorganics & Metals Supervisor Michael Mowle, Inorganics Supervisor Todd Lee, Group Operations Manager
Laboratory Manager	Michael Kubiak

Method Summary

Method ID	Methodology Summary
Calc	Calculation
Calc - TKN	TKN determined by calculation (Total Nitrogen - NOx).
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-127	Total Nitrogen by high temperature catalytic combustion with chemiluminescence detection. Organic Carbon forms (inorganic, organic, total) determined using a TOC/NDIR analyser via combustion. Dissolved forms require filtering prior to determination.
METALS-020	Determination of various metals by ICP-OES.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS.

Certificate of Analysis PDJ1431

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis PDJ1431

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH.*

Air volume measurements are not covered by Envirolab's NATA accreditation.

Method Summary

Method ID	Methodology Summary
Calc	Calculation
Calc - TKN	TKN determined by calculation (Total Nitrogen - NOx).
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-127	Total Nitrogen by high temperature catalytic combustion with chemiluminescence detection. Organic Carbon forms (inorganic, organic, total) determined using a TOC/NDIR analyser via combustion. Dissolved forms require filtering prior to determination.
METALS-020	Determination of various metals by ICP-OES.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS.

Certificate of Analysis PEA1022

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis PEA1022

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH.*

Air volume measurements are not covered by Envirolab's NATA accreditation.

QC Comments

Identifier	Description
[1]	Spike recovery is not applicable due to the relatively high analyte background in the sample (>3* spike level). However, the LCS recovery is within acceptance criteria.

Method Summary

Method ID	Methodology Summary
Calc	Calculation
Calc - TKN	TKN determined by calculation (Total Nitrogen - NOx).
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-081	Anions determined by Ion Chromatography. Waters samples are filtered on receipt prior to analysis. Solids are analysed from a water extract. Alternatively determined by colourimetry/turbidity using Discrete Analyser.
INORG-127	Total Nitrogen by high temperature catalytic combustion with chemiluminescence detection. Organic Carbon forms (inorganic, organic, total) determined using a TOC/NDIR analyser via combustion. Dissolved forms require filtering prior to determination.
METALS-020	Determination of various metals by ICP-OES.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS.
MICRO-001B	E. coli/Thermotolerant coliforms: Microbial Water Analysis - in accordance with MICRO-001 (AS4276.5-latest edition). Recommended maximums based on NHMRC Australian Drinking Water Guidelines. Please note that results for this test derived from counts outside of the range 10-100 are considered approximate as per AS4276.1.

Certificate of Analysis PED0680

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis PED0680

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH.*

Air volume measurements are not covered by Envirolab's NATA accreditation.

Date Samples Received	19/07/2023
Date Samples Registered	19/07/2023

Analysis Details

Please refer to the following pages for results, methodology summary and quality control data.
Samples were analysed as received from the client. Results relate specifically to the samples as received.
Results are reported on a dry weight basis for solids and on an as received basis for other matrices.

Report Details

Date Results Requested by	26/07/2023
Date of Issue	26/07/2023

NATA Accreditation Number 2901. This document shall not be reproduced except in full.
Accredited for compliance with ISO/IEC 17025. Tests not covered by NATA are denoted with *.

Method Summary

Method ID	Methodology Summary
Calc	Calculation
Calc - TKN	TKN determined by calculation (Total Nitrogen - NOx).
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-081	Anions determined by Ion Chromatography. Waters samples are filtered on receipt prior to analysis. Solids are analysed from a water extract. Alternatively determined by colourimetry/turbidity using Discrete Analyser.
INORG-127	Total Nitrogen by high temperature catalytic combustion with chemiluminescence detection. Organic Carbon forms (inorganic, organic, total) determined using a TOC/NDIR analyser via combustion. Dissolved forms require filtering prior to determination.
METALS-020	Determination of various metals by ICP-OES.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS. Please note for Bromine and Iodine, any forms of these elements that are present are included together in the one result reported for each of these two elements.
MICRO-001B	E. coli/Thermotolerant coliforms: Microbial Water Analysis - in accordance with MICRO-001 (AS4276.5-latest edition). Recommended maximums based on NHMRC Australian Drinking Water Guidelines. Please note that results for this test derived from counts outside of the range 10-100 are considered approximate as per AS4276.1.

Certificate of Analysis PEG1093

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis PEG1093

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH.*

Air volume measurements are not covered by Envirolab's NATA accreditation.

Data Quality Assessment Summary PEG1093

Client Details

Client	Hyd2O
Your Reference	H21064 - East Wanneroo Monitoring
Date Issued	26/07/2023

Recommended Holding Time Compliance

No recommended holding time exceedances

Quality Control and QC Frequency

QC Type	Compliant	Details
Blank	Yes	No Outliers
LCS	Yes	No Outliers
Duplicates	No	Duplicate Outliers Exist - See detailed list below
Matrix Spike	No	Matrix Spike Outliers Exist - See detailed list below
Surrogates / Extracted Internal Standards	Yes	No Outliers
QC Frequency	Yes	No Outliers

Surrogates/Extracted Internal Standards, Duplicates and/or Matrix Spikes are not always relevant/applicable to certain analyses and matrices. Therefore, said QC measures are deemed compliant in these situations by default. See Laboratory Acceptance Criteria for more information

QC Comments

Identifier	Description
[1]	Spike recovery is not applicable due to the relatively high analyte background in the sample (>3* spike level). However, the LCS recovery is within acceptance criteria.
[2]	Duplicate %RPD may be flagged as an outlier to routine laboratory acceptance, however, where one or both results are <10*PQL, the RPD acceptance criteria increases exponentially.
[3]	The laboratory duplicate RPD acceptance criteria has been exceeded. Sample heterogeneity suspected. 3 sets of data have been provided to help demonstrate the degree of non-homogeneity within the sample as well as assessing the analytical precision.

Method Summary

Method ID	Methodology Summary
Calc	Calculation
Calc - TKN	TKN determined by calculation (Total Nitrogen - NOx).
INORG-055	Nitrate/Nitrite/NOx/TKN - determined colourimetrically. Waters samples are filtered on receipt prior to analysis. Soils/solids are analysed following a water extraction.
INORG-057	Ammonia - determined colourimetrically. Water samples are filtered on receipt prior to analysis. Soils and OHS media are analysed following a water extraction. Alternatively, Ammonia can be extracted from soil using 1M KCl.
INORG-060	Phosphate - determined colourimetrically using APHA latest edition 4500 P E. Water samples are filtered on receipt prior to analysis. Soils are analysed from a water extract.
INORG-081	Anions determined by Ion Chromatography. Waters samples are filtered on receipt prior to analysis. Solids are analysed from a water extract. Alternatively determined by colourimetry/turbidity using Discrete Analyser.
INORG-127	Total Nitrogen by high temperature catalytic combustion with chemiluminescence detection. Organic Carbon forms (inorganic, organic, total) determined using a TOC/NDIR analyser via combustion. Dissolved forms require filtering prior to determination.
METALS-020	Determination of various metals by ICP-OES.
METALS-021	Determination of Mercury by Cold Vapour AAS.
METALS-022	Determination of various metals by ICP-MS. Please note for Bromine and Iodine, any forms of these elements that are present are included together in the one result reported for each of these two elements.
MICRO-001B	E. coli/Thermotolerant coliforms: Microbial Water Analysis - in accordance with MICRO-001 (AS4276.5-latest edition). Recommended maximums based on NHMRC Australian Drinking Water Guidelines. Please note that results for this test derived from counts outside of the range 10-100 are considered approximate as per AS4276.1.

Certificate of Analysis PEK1352

Result Definitions

Identifier	Description
NR	Not reported
NEPM	National Environment Protection Measure
NS	Not specified
LCS	Laboratory Control Sample
RPD	Relative Percent Difference
>	Greater than
<	Less than
PQL	Practical Quantitation Limit
INS	Insufficient sample for this test
NA	Test not required
NT	Not tested
DOL	Samples rejected due to particulate overload (air filters only)
RFD	Samples rejected due to filter damage (air filters only)
RUD	Samples rejected due to uneven deposition (air filters only)
##	Indicates a laboratory acceptance criteria outlier, for further details, see Result Comments and/or QC Comments

Quality Control Definitions

Blank

This is the component of the analytical signal which is not derived from the sample but from reagents, glassware etc, and is determined by processing solvents and reagents in exactly the same manner as for samples.

Surrogate Spike

Surrogates are known additions to each sample, blank, matrix spike and LCS in a batch, of compounds which are similar to the analyte of interest, however are not expected to be found in real samples.

LCS (Laboratory Control Sample)

This comprises either a standard reference material or a control matrix (such as a blank sand or water) fortified with analytes representative of the analyte class. It is simply a check sample.

Matrix Spike

A portion of the sample is spiked with a known concentration of target analyte. The purpose of the matrix spike is to monitor the performance of the analytical method used and to determine whether matrix interferences exist.

Duplicate

This is the complete duplicate analysis of a sample from the process batch. The sample selected should be one where the analyte concentration is easily measurable.

Certificate of Analysis PEK1352

Laboratory Acceptance Criteria

Duplicate sample and matrix spike recoveries may not be reported on smaller jobs, however, were analysed at a frequency to meet or exceed NEPM requirements. All samples are tested in batches of 20. The duplicate sample RPD and matrix spike recoveries for the batch were within the laboratory acceptance criteria. Filters, swabs, wipes, tubes and badges will not have duplicate data as the whole sample is generally extracted during sample extraction. Spikes for Physical and Aggregate Tests are not applicable. For VOCs in water samples, three vials are required for duplicate or spike analysis.

General Acceptance Criteria (GAC) - Analyte specific criteria applies for some analytes and is reflected in QC recovery tables.

Duplicates: >10xPQL - RPD acceptance criteria will vary depending on the analytes and the analytical techniques but is typically in the range 20%-50% - see ELN-P05 QAQC tables for details (available on request); <10xPQL - RPD are higher as the results approach PQL and the estimated measurement uncertainty will statistically increase. Matrix Spikes, LCS and Surrogate recoveries: Generally 70-130% for inorganics/metals; 60-140% for organics (+/-50% surrogates) and 10-140% for labile SVOCs (including labile surrogates), ultra trace organics and speciated phenols is acceptable.

In circumstances where no duplicate and/or sample spike has been reported at 1 in 10 and/or 1 in 20 samples respectively, the sample volume submitted was typically insufficient in order to satisfy laboratory QA/QC protocols.

Miscellaneous Information

When samples are received where certain analytes are outside of recommended technical holding times (THTs), the analysis has proceeded. Where analytes are on the verge of breaching THTs, every effort will be made to analyse within the THT or as soon as practicable.

Where sampling dates are not provided, Envirolab are not in a position to comment on the validity of the analysis where recommended technical holding times may have been breached. We have taken the sampling date as being the date received at the laboratory.

Two significant figures are reported for the majority of tests and with a high degree of confidence, for results <10*PQL, the second significant figure may be in doubt i.e. has a relatively high degree of uncertainty and is provided for information only.

Measurement Uncertainty estimates are available for most tests upon request.

Analysis of aqueous samples typically involves the extraction/digestion and/or analysis of the liquid phase only (i.e. NOT any settled sediment phase but inclusive of suspended particles if present), unless stipulated on the Envirolab COC or by correspondence. Notable exceptions include certain Physical Tests (pH/EC/BOD/COD/Apparent Colour etc.), Solids testing, Total Recoverable metals and PFAS where sediment/solids are included by default.

Urine Analysis - The BEI values listed are taken from the 2022 edition of *TLVs and BEIs Threshold Limits by ACGIH.*

Air volume measurements are not covered by Envirolab's NATA accreditation.

Data Quality Assessment Summary PEK1352

Client Details

Client	Hyd2O
Your Reference	H21064 - East Wanneroo Monitoring
Date Issued	24/11/2023

Recommended Holding Time Compliance

Recommended holding time exceedances exist - See detailed list below

Quality Control and QC Frequency

QC Type	Compliant	Details
Blank	Yes	No Outliers
LCS	Yes	No Outliers
Duplicates	No	Duplicate Outliers Exist - See detailed list below
Matrix Spike	No	Matrix Spike Outliers Exist - See detailed list below
Surrogates / Extracted Internal Standards	Yes	No Outliers
QC Frequency	Yes	No Outliers

Surrogates/Extracted Internal Standards, Duplicates and/or Matrix Spikes are not always relevant/applicable to certain analyses and matrices. Therefore, said QC measures are deemed compliant in these situations by default. See Laboratory Acceptance Criteria for more information

Data Quality Assessment Summary PEK1352

QC Comments

Identifier	Description
[1]	Spike recovery is not applicable due to the relatively high analyte background in the sample (>3* spike level). However, the LCS recovery is within acceptance criteria.
[2]	Duplicate %RPD may be flagged as an outlier to routine laboratory acceptance, however, where one or both results are <10*PQL, the RPD acceptance criteria increases exponentially.

SIZE
- 0.2382 ha excl Parkland Reserve

POS 2 TYPOLOGY
- Pocket POS

SIZE
- 0.2339 ha excl Parkland Reserve

POS 3 TYPOLOGY
- Pocket POS

SIZE
- 0.6817 ha excl Parkland Reserve

POS 1, 2 & 3 CONCEPT
- Footpath connections through the POS to improve connectivity and walkability
- Provide informal tracks through existing vegetation
- Picnic areas, bench seats, shade structures and play space

FUNCTIONS / MATERIALS
- Open grassed areas for passive recreation
- Shade sails to feature playground
- Shelter & picnic settings
- Bench seats to provide rest point
- Water-wise native planting and planting
- Drainage areas per LWMS

ENVIRONMENTAL CONSIDERATIONS
- Significant existing trees to be retained where possible
- Carnaby black cockatoo habitat
- Source local materials where possible to minimise transport requirements and provide local employment.
- Consider long-term maintenance requirements.
- No management or modification to Parkland Reserve vegetation except 3m wide perimeter firebreaks. Where existing, firebreak to be maintained.
- POS Landscape design to achieve low threat as per AS 3959 and will include low fuel planting, as required

APPENDIX A – EAST WANNEROO PRECINCT 3 LOCAL STRUCTURE PLAN

1. EXECUTIVE SUMMARY

This report has been prepared by Cossill & Webley (CW) for East Wanneroo Precinct 3. It summarises the results of a review of the engineering aspects which have informed and support the Local Structure Plan.

This report provides details on each major infrastructure type and a servicing strategy for the development of the precinct. The level of detail is preliminary, and acknowledges further work will be required as the planning for the precinct progresses and there is greater certainty on the proposed development.

The engineering review has covered siteworks, roadworks, stormwater drainage, sewerage, water supply and utility services.

The investigation has confirmed the land is capable of supporting the proposed development in accordance with the Local Structure Plan with a logical progressive extension of infrastructure and base capacity.

The existing ground conditions and past land uses will not limit the proposed development.

Road access to the development will be provided via existing roads which bound the Precinct.

Sewerage will be provided for the majority of the Precinct by constructing a permanent wastewater pump station on Elliot Road and supplemented by two temporary pump stations at low points on the eastern boundary, as development progresses.

There is adequate existing water infrastructure to service the Site.

Initial power supply can be provided by connection to the existing high voltage (HV) infrastructure in Elliot and Nicholas Roads. Western Power has advised that ultimately the East Wanneroo Precinct 3 residential development will require a new distribution feeder from the Wangara Substation, to provide the required capacity.

Telecommunications and gas are available from existing services on Lenore Road.

The investigations and preparation of this report is largely based on preliminary advice from the various service authorities. The information is current as of March 2025, and is subject to change as development progresses.

2. INTRODUCTION

This report has been prepared by Cossill & Webley Pty Ltd (CW) for the East Wanneroo Precinct 3 Local Structure Plan (LSP). It summarises the results of a review of the engineering aspects which have informed and support the Local Structure Plan and are related to the future servicing of the developed land.

The preparation of East Wanneroo Precinct 3 Local Structure Plan (LSP) has been carried out by a team of consultants, led by Burgess Design Group and covers an area of approximately 130.8 hectares. The East Wanneroo Precinct 3 LSP is presented in Appendix A for reference.

The East Wanneroo Precinct 3 area is identified by the red boundary presented below in Figure 1.

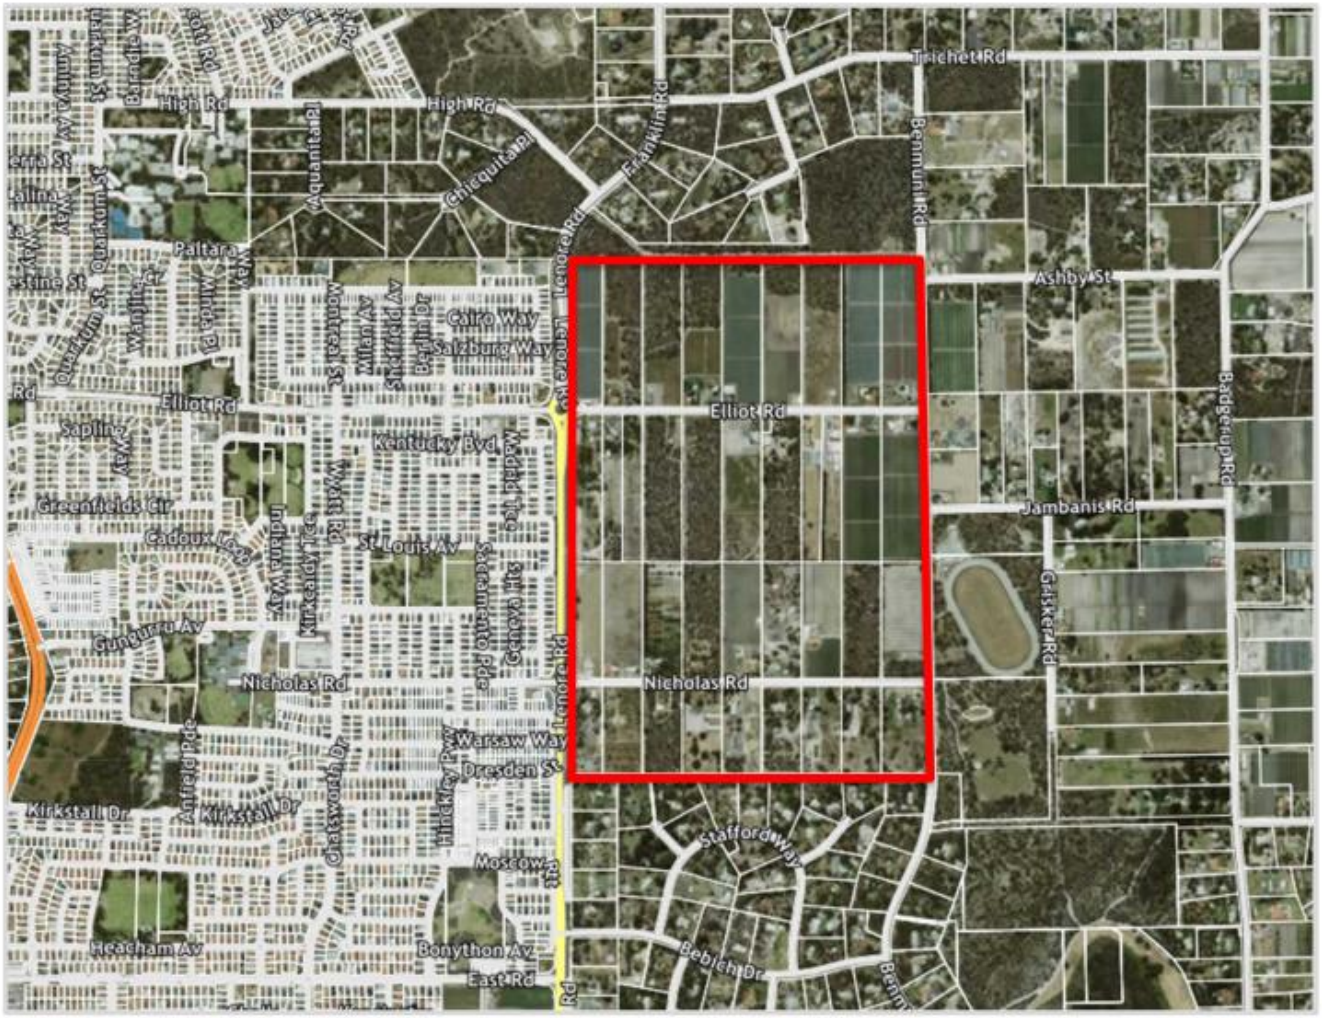

Figure 1 - Site Plan (MetroMap, December 2024)

3. SITE DESCRIPTION

East Wanneroo Precinct 3 is 130.76 hectares in area and is situated within the City of Wanneroo, approximately 25 kilometres north of the Perth city centre, and 11 kilometres east of the Joondalup city centre. The Site is bound by an undeveloped road reserve to the south, which is gazetted and to be named Shenton Road in the future, Lenore Road to the west, bushland and undeveloped access way to the north and Benmuni Road to the east.

As presented in Figure 1 above, majority of the site has been cleared historically, with portions of vegetation remaining on the Site. Approximately half the cleared area is market gardens, with the majority of the remainder being used for grazing, or laydown purposes.

3.1 Acid Sulphate Soils

A desk top review of the Department of Environment and Conservation's ASS Risk Map for the Northern Metropolitan Region for potential for Acid Sulphate Soils (ASS) indicates the entire Site has no recorded risk of ASS. There is a pocket of land north of the northeast corner of the site which shows high to moderate risk occurring within 3m of the natural soil surface (or deeper) which may impact the development of a boundary road and services and treatment may be required in that area. Treatment of ASS soil and groundwater is a well known process and does not pose a significant cost or development risk.

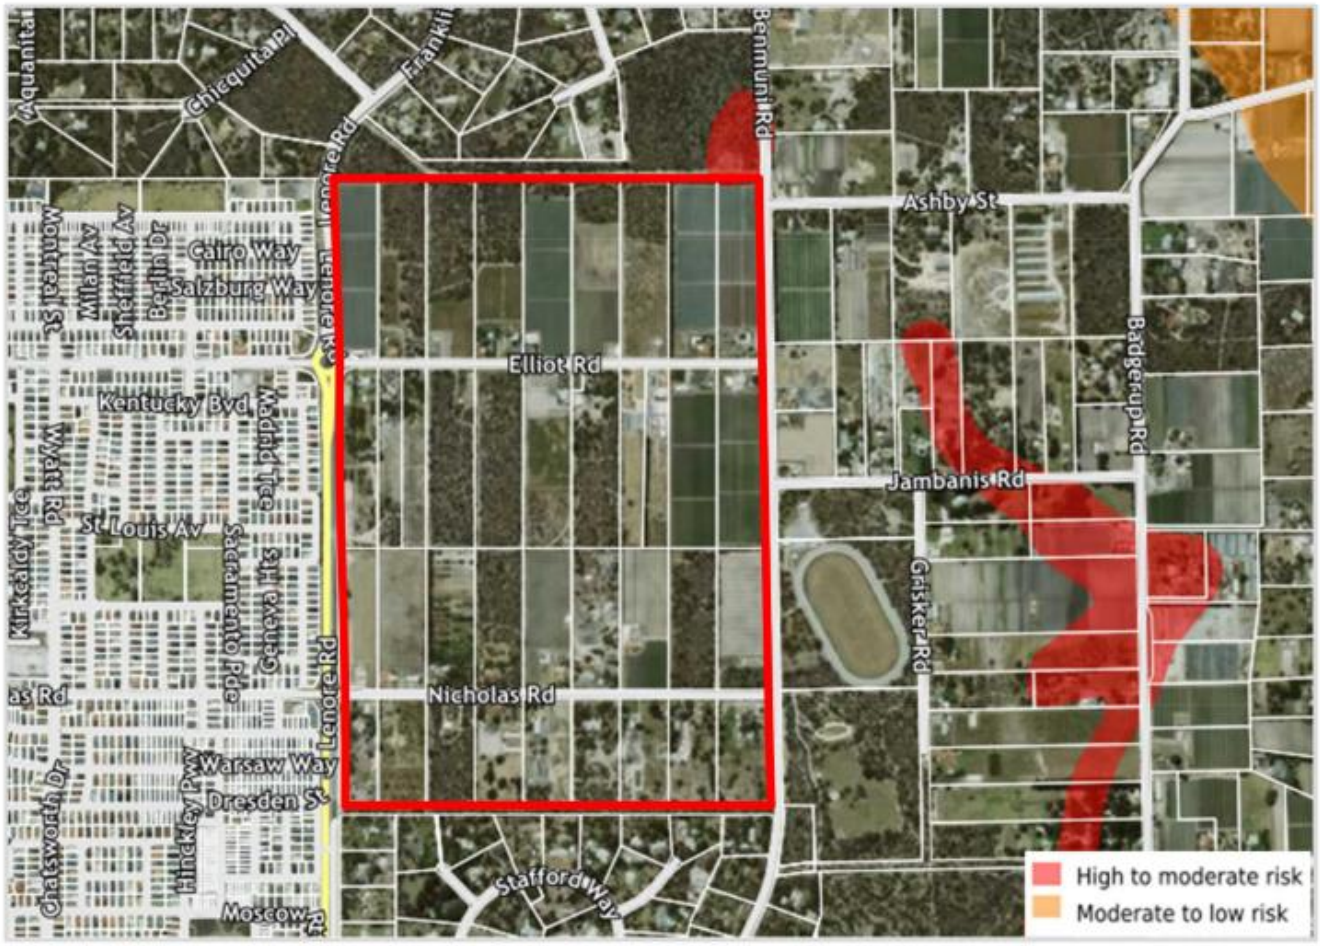

Figure 2 – Acid Sulfate Soils Risk Mapping (MNG Access, December 2024)

3.2 Existing Topography

The Site generally grades down from west to east, from RL86m AHD on the boundary in the vicinity of the intersection of Lenore Road and Nicholas Road, to RL51m AHD at the northeastern corner, and RL50m AHD at the southeastern corner of the Site. Figure 3 below shows the contours across the Site.

Figure 3 – Site Contours (MNG Maps, December 2024)

3.3 Geology and Landform

An excerpt from the Geological Survey of Western Australia Perth Metropolitan Region soils map for Perth (part 2034 III & 2134 III) is presented below in Figure 4. This indicates the site is underlain by sand (Tamala Limestone, S7) extending through the entire Site area, and is described as "pale and olive yellow, medium to coarse-grained, sub angular to sub-rounded, quartz, trace of feldspar, moderately sorted of residual origin".

Sand derived from Tamala limestone is generally free draining, with medium permeability, and well-suited to development.

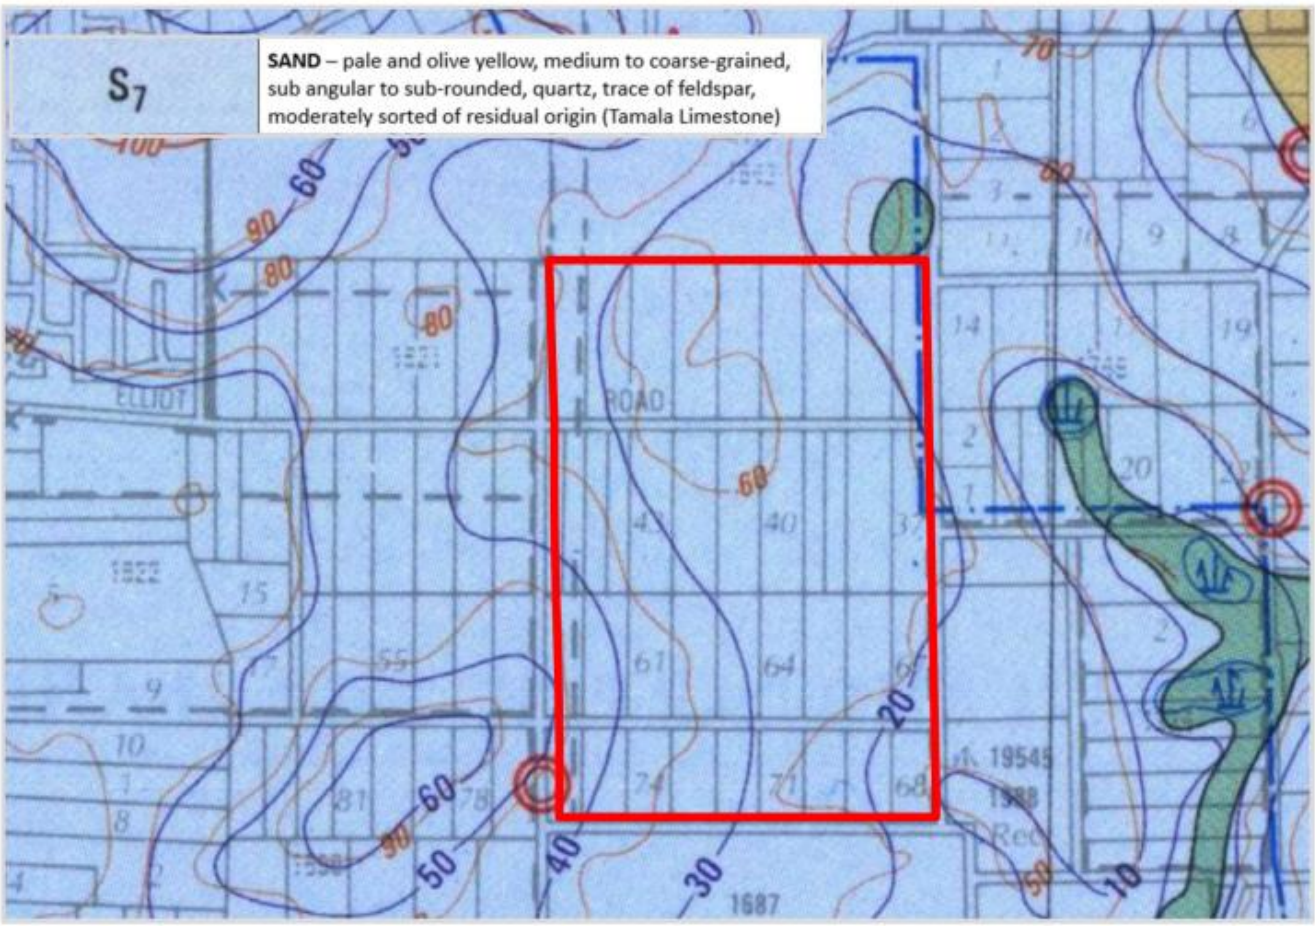

Figure 4 - Geotechnical Information (Geological Survey of WA)

Based on our experience on similar projects within the area, the Site is well suited for future development in terms of topography and geotechnical conditions and will provide a suitable foundation for roads, infrastructure and proposed development. It is anticipated an AS 2870 Classification of "Class A". A geotechnical investigation will be required to confirm the classification.

3.4 Groundwater

A review of Groundwater mapping shows that the Site has good clearance to groundwater, with the minimum clearance being at least 5m at the Site low points on the eastern boundary.

4. SITEWORKS & EARTHWORKS

Siteworks and Earthworks for the Site will need to accomodate the exisitng topogrophy, areas of vegetation identified for conservation, and several existing homesteads.

The principle of the earthworks deign is to achieve positive outcomes, which include the following:

- Reduction in total home building cost.
- Rationalisation of retaining wall layouts, consistent with the City of Wanneroo specifications.
- Terrace lots up the natural slopes to maintain natural topography.
- Grading roads to follow the existing topography where possible, while catering for proposed gravity services and meet the standards of the required approval agencies.
- Accommodating drainage swales/basins in areas of local public open space.
- Matching existing levels of existing roads and homesteads, POS, and conservation bushland in the area.

The retention of homestead lots will influence the earthworks strategy, and accommodating their existing levels may not necessarily suit the most efficient subdivision earthworks design. This also applies to tying into existing ground levels along neighbouring boundaries of properties. Level differences will require walls, and approval from neighbouring landowners is required to build on the common boundary.

Siteworks and earthworks will generally consist of the following:

- Demolish buildings and hardstands.
- Remove trees including grubbing out roots and stumps.
- Strip the topsoil, all organic material, roots and other unsuitable or deleterious material from the Site. The history of market gardening within the Site may required a deeper than average top soil strip.
- Topsoil unsuitable for re-use may be retained for use on-site as non-structural fill (eg in planted areas outside building areas and sports ovals).
- Proof compact the exposed surface to achieve the level of compaction determined by a Geotechnical Engineer. If weak areas are idenfiied during proof compaction, or the level of compaction is not achieved, further compaction or over-excavation and backfilling with compacted, approved fill of these zones will be required.
- Where fill is required to achieve the required levels, place and compact approved free draining granular fill.

5. DRAINAGE

5.1 Urban Water Management

Stormwater drainage management is a major component of an overall water strategy. Water Sensitive Urban Design (WSUD) techniques are incorporated during planning, design and construction of urban development projects to achieve the desired outcomes.

An Urban Water Management Plan will be required for the site, which will provide the following:

- Defines land area requirements for conveyance of flood flows and protection of future urban development from peak flood events.
- Proposes a drainage strategy appropriate for the local conditions, and outlines potential WSUD initiatives at the inter-allotment and POS scale. The location of areas within Public Open Space (POS) for the WWPS and drainage infrastructure will need to be considered in the subdivision design and POS calculations.
- Prescribes the design criteria for water quantity and quality for each sub-catchment.
- Outlines hydrologic and hydraulic framework parameters and develops the overall drainage network concept.
- Defines an implementation plan for the drainage design strategy.

5.2 Water Quality Management

The sandy soil on Site will allow for onsite storage and dissipation of stormwater. Recharge water quality will be improved through the adoption of 'Best Management Practices' which promote the disposal of runoff via water pollution control facilities (including vegetated swales and basins, detention storages and gross pollutant traps) and the implementation of non-structural source controls (including urban design, street sweeping, community education, low fertiliser landscaping regimes, etc)

5.3 Stormwater Collection and Disposal

Drainage from public roads and lanes would be collected via conventional pit and pipe systems. The drainage collection and conveyance system will be designed to cater for the runoff from storms with up to a 20% annual exceedance probability (AEP) event.

A series of detention basins would be designed to store runoff for the 20%, 10% and 1% AEP events. In all cases, roads and POS would be designed to cater for the surface overflow for more severe storms with building pad levels set at least 300 millimetres above the 1% AEP flood level in roadways and 500 millimetres above the 1% AEP flood level for storage detention basins.

The dispersion of stormwater disposal throughout the site (via soakwells, swales and basins) will maximise the area of recharge down through the soil profile to the shallow aquifer, thereby maximising the potential for nutrient stripping and water quality improvements. The basins will also assist nutrient removal in conjunction with other measures such as suitable vegetation planting and the use of modified soils with high phosphorous retention capacity.

Hyd2o has been engaged as the consulting hydrologist to prepare a Local Water Management Strategy. This includes the identification of drainage catchments and the location of proposed basins within POS areas.

6. ROADS

Lenore Road forms the western boundary of the Site and has direct connection to the Regional Road, Ocean Reef Road (the future Ocean Reef Upper Swan Highway) to the south. Lenore Road is a paved two-lane bidirectional road which is currently being upgraded to four lanes. It has been upgraded to an urban standard from the southern boundary of the Site to the Lenore Road/Elliot Road round-a-bout with kerbs, footpaths, drainage and line markings.

North of the round-a-bout, Lenore Road is constructed to a lower standard, with line markings, but without kerbs, footpaths or drainage.

It is expected that the existing roundabout at the Lenore Road/Elliot Road intersection will ultimately need to be upgraded to accommodate the wider road reserve on Elliot Road.

At the time of writing this report, the intersection of Lenore Road and Nicholas Road is being upgraded.

Benmuni Road on the eastern boundary is a paved two-lane bidirectional road constructed to a rural standard, and is currently classified as a 'Local Distributor'. Benmuni Road will need to be upgraded to a 'Neighbourhood Connector Type A' boulevard road, with a median strip, kerbs, footpaths, drainage and line markings. Round-a-bouts are expected to be required at the Benmuni Road, Ashley St and Nicholas Road intersections.

6.1 Internal Roads and Footpaths

The LSP comprises a network of development roads including neighbourhood connectors and local access roads.

The main internal road within East Wanneroo Precinct 3 will be Elliot Road, which bisects the Site, east to west connecting Lenore and Benmuni Roads. Elliott Road will need to be upgraded to a 45m wide road reserve to accommodate future traffic and public transport needs. There are several existing homesteads abutting Elliott Road, which impact the road layout, creating a slight meandering of the road. The specific cross section of the road reserve will be resolved as the planning process progresses. Elliot Road is expected to be funded as a District DCP item.

Nicholas Road, which crosses Site from east to west, will provide a secondary entrance, and will need to be upgraded to a 'Neighbourhood Connector Road Type B'. The tee intersection with Lenore Road is currently being constructed and will facilitate full movement, with the exception of the western leg which is left-in-left-out only.

A north-south Neighbourhood Connector road will connect Elliott Road to Nicholas Road through the centre of the development.

Lower order roads will connect to the main east-west roads to provide access to land uses.

In all cases the road cross-sections will be designed to cater for utility services on standard verge alignments, street trees, parking embayments where appropriate, off-street and on-street cycling lanes in accordance with the overall pedestrian and cycling network.

The engineering design of roads will be carried out to comply with the Department of Planning's Liveable Neighbourhoods recommendations for design speeds and sight distances and with the requirements of the City of Wanneroo. We anticipate roadworks will generally consist of kerbed and asphalted pavements.

Footpaths will be provided in accordance with Liveable Neighbourhoods and the City of Wanneroo standards.

6.2 Public Transport

The Site is immediately east of Lenore Road Transit Link, which is anticipated to have exclusive bus lanes constructed within the road reserve in the future, as East Wanneroo is developed. An existing bus route on Chatsworth Drive is available, which is within 650m of Site.

7. WASTEWATER

The Water Corporation has provided advice regarding provision of Wastewater to the Site confirming a permanent wastewater pump station (WWPS) is required adjacent to Elliot Road at the low point, known as Jandabup Pump Station S. This pump station is part of the Jandabup Sewer District Plan, as shown in Figure 5. This permanent WWPS will service a significant portion of Precinct 3 and in the ultimate sense will likely discharge via a pressure main and gravity sewer to the south of Ocean Reef Road once the area is more fully developed. The area that can be served by the Jandabup Pump Station S is outlined by the light green line below, and comprises approximately half of the LSP area in the north-west.

The Water Corporation has indicated that Jandabup WWPS S can discharge into the existing DN305 sewer near the intersection of Prindiville Drive and Hartman Drive south of the development, south of Ocean Reef Road. The alignment of the pressure main is yet to be determined, and will be progressed as development occurs. CW understands the permanent Jandabup WWPS S will be funded by the Water Corporation, although it is not currently on Water Corporation's Capital Investment Program.

The remainder of the site does not fall into the catchment for Jandabup WWPS S and in the ultimate sense is reliant on downstream gravity sewer being constructed by others. The timing of this downstream infrastructure is unknown, and likely to be after development of Precinct 3 has occurred. In this scenario two temporary WWPS will be required in order to serve the balance of the LSP area. The most efficient locations for the WWPS is in the north-east and south-east corners at natural low points as noted below. The discharge for these temporary WWPS is dependent on available sewer infrastructure at the time. The temporary WWPS and pressure mains are likely to be at the Developer's cost.

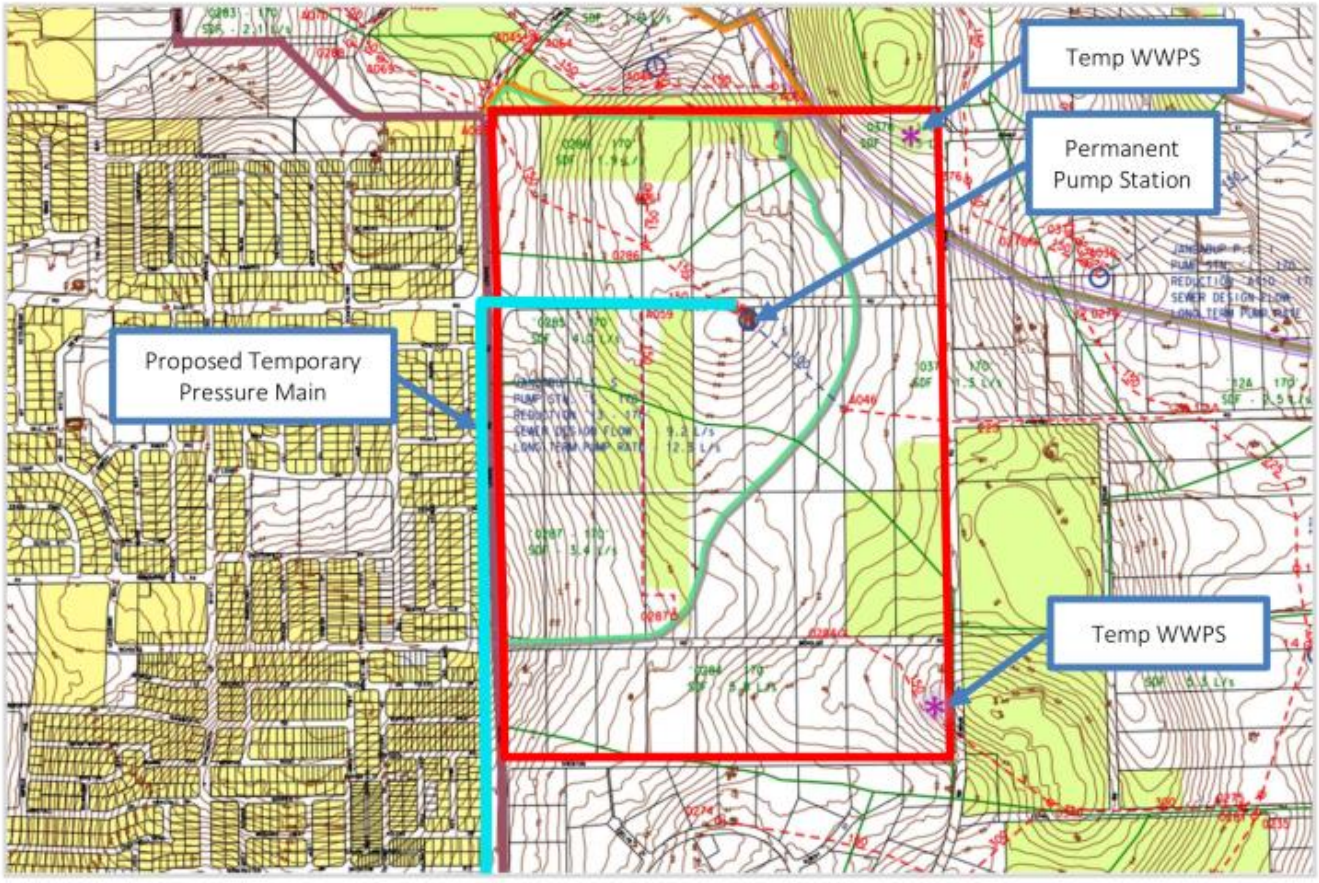

Figure 5 - Conceptual Long Term Wastewater Scheme Planning - Overview (Water Corporation, 2020)

8. WATER RETICULATION

The Site has existing water infrastructure available for connection, as depicted in Figure 6. There is a 610mm steel distribution pipe in the western verge of Lenore Road and a 300mm distribution main in Benmuni Road. In addition, there is a a 100mm main in Nicholas Road.

The Water Corporation has advised that the initial frontal stages of East Wanneroo Precinct 3 can be serviced via an extension of reticulation mains from Lenore Road. However, future areas and some areas of elevated land will need to be serviced by extension off the high-level mains. The extent of these areas is not yet confirmed, and The Water Corporation will confirm this at a later stage of the development process.

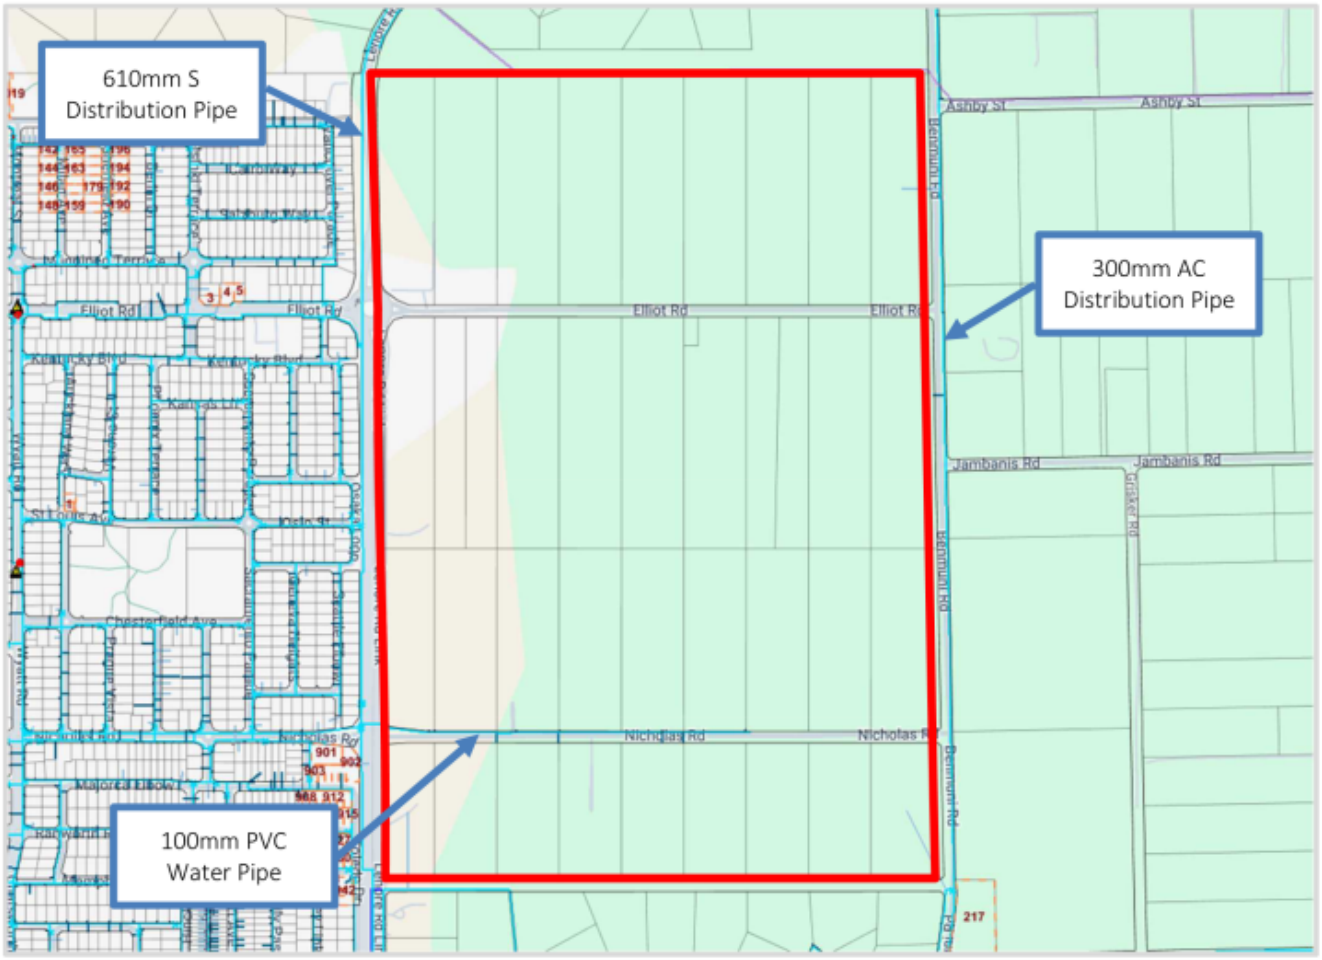

Figure 6 – Water Reticulation Infrastructure (Water Corporation Esinet, Dec 2024)

9. GAS SUPPLY

There are existing DN160, DN110 and DN63 high pressure steel gas mains located in various segments of Lenore Road adjacent to the Site. The DN160 stub at the intersection of Elliot Road and Lenore Road likely can be extended to service the development. Confirmation of gas capacity from ATCO of will be required.

10. POWER SUPPLY

Western Power's Network Mapping Tool confirms there is currently limited spare electricity capacity in the East Wanneroo corridor, and a high voltage feeder to the Wangara substation to the west will ultimately be required to increase capacity to service the Site. Based on R20-R40 zoning, the Site is expected to require approximately 7.9MVA.

There are existing high voltage overhead power lines in Elliot Road, Nicholas Road and Benmuni Road. The lines on Elliot Road and Nicholas Road have been undergrounded under Lenore Road on the western boundary. The remaining overhead lines on Elliot Road and Nicholas Road will require undergrounding. Existing power is shown in Figure 7.

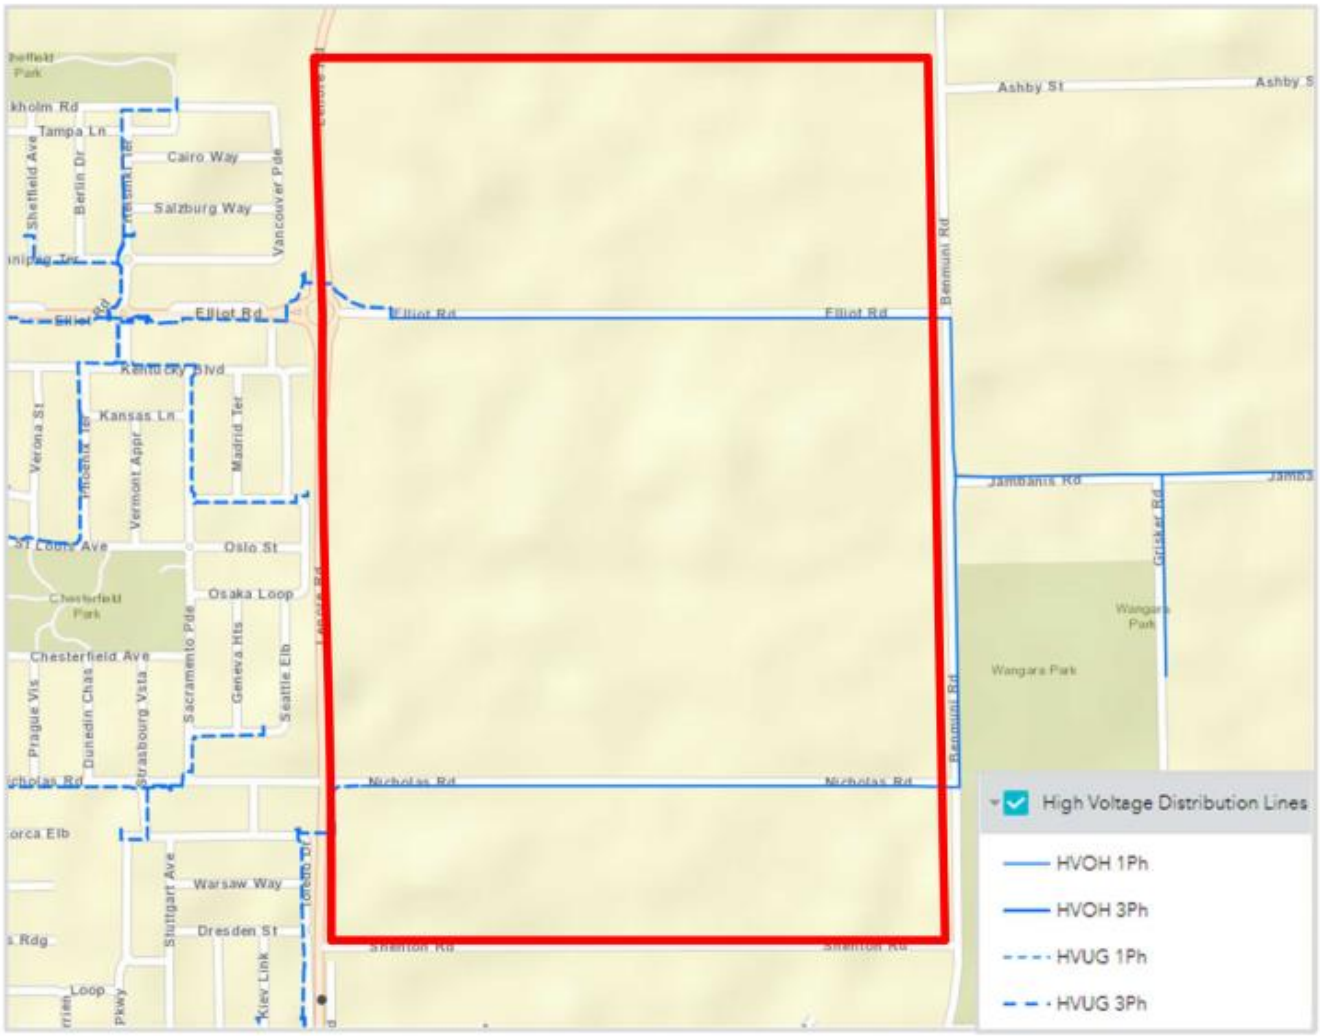

Figure 7 – Existing Power Network (Western Power, 2024)

11. TELECOMMUNICATIONS

The Site is within NBN's fixed line footprint, and can be serviced with optic fibre via a headworks extension from their existing network. There are existing NBN pit and pipe services within Lenore Road, Nicholas Road, Elliot Road, and Benmuni Road that can serve as connections. Some lot connections will require removal by NBN to allow for subdivision.

The current design practice for road reserves, pavement and verge provisions will make adequate allowance for services including broadband in accordance with the agreed Utilities Service Providers handbook. There will be some local land requirements for telecommunications equipment sites which will be accommodated at detailed subdivision stage.

12. CONCLUSION

The Site is well suited for the proposed development outlined in the Local Structure Plan.

The ground conditions are suitable for the proposed development, and will likely achieve a Class A classification.

The drainage concept is likely to be straight forward, as there is permeable soil and good clearance to groundwater.

There are known sewer and water strategies to support the development, and the Water Corporation will further progress the sewer supply strategy as the planning becomes more certain.

Power can be connected to the Site, and development can begin to the extent that power capacity is available for initial stages.

INTRODUCTION

Register of Delegation of Authority

Councils have certain functions and duties that they must perform, and certain powers which they may exercise pursuant to the *Local Government Act 1995* (the Act) and other legislation. Generally, the relevant legislation grants those obligations and powers directly on the Council as a body.

Council's power to delegate is provided for in Section 5.42 and 5.43 of the *Local Government Act 1995* (the Act). This section provides that the Council may delegate any of its functions, other than those specified in Section 5.43 to the CEO. Council cannot however, delegate directly to another Officer of the City unless the statute allows for that Delegation.

The CEO must be delegated the necessary functions to be able to then sub-delegate those functions to an Officer. This is provided for in Section 5.44 of the Act, whereby the CEO may delegate any of the functions of the CEO, other than the power of Delegation.

When a decision making power has been delegated by Council, both Council and the Delegate are authorised to exercise that power.

A register of delegations, being this manual, relevant to the Chief Executive Officer and other employees is to be kept and reviewed at least once every financial year.

Each instrument of delegation describes the function being delegated and the relevant statutory reference which is the source of power for the exercise of the function. Also included is a reference to related documents such as policies of the Council which may provide guidance in the exercise of the delegation.

This delegated authority register will be reviewed in accordance with the Act on an annual basis.

1.1.13 TENDERS FOR GOODS AND SERVICES – ACCEPTING, CLARIFYING AND REJECTING TENDERS; MINOR VARIATION TO GOODS AND SERVICES PRIOR TO CONTRACT

Function Delegated: *This text is provided as a reference only. Delegates shall only act in full understanding of the delegated statutory power, inclusive of conditions [see below].*	1. Authority to determine whether or not to reject tenders that do not comply with requirements as specified in the invitation to tender [F&G.r.18(2)]. 2. Authority to seek clarification from tenderers in relation to information contained in their tender submission [F&G r.18(4a)]. 3. Authority to assess, by written evaluation, tenders that have not been rejected, to determine: i. The extent to which each tender satisfies the criteria for deciding which tender to accept; and ii. To accept the tender that is most advantageous [F&G r.18(4)]. 4. Authority to decline to accept any tender [F&G r.18(5). 5. Authority to accept the next most advantageous tender if, within six months of accepting a tender, a contract has not been entered into **OR** the local government and the successful tenderer agree to terminate the contract 'F&G r.18(6) & (7)] 6. Authority to determine whether variations in goods and services required are minor variations, and to negotiate with the successful tenderer to make minor variations **before** entering into a contract [F&G r.20(1) and (3)]. 7. Authority to choose the next most advantageous tender to accept, if the chosen tenderer is unable or unwilling to form a contract to supply the varied requirement OR the minor variation cannot be agreed with the successful tenderer, so that the tenderer ceases to be the chosen tenderer [F&G r.20(2)].
Statutory Power being Delegated:	*Local Government Act 1995*: s.3.57 Tenders for providing goods or services *Local Government (Functions and General) Regulations 1996* r.18 (2), (4), (4a), (5), (6) & (7) Rejecting and accepting tenders r.20(1), (2) & (3) Variation of requirements before entry into contract

1.1.36 PROCUREMENT OF GOODS OR SERVICES REQUIRED TO ADDRESS A STATE OF EMERGENCY

Function Delegated: This text is provided as a reference only. Delegates shall only act in full understanding of the delegated statutory power, inclusive of conditions [see below].	Authority, only to be exercised when a State of Emergency declaration is in force and applies to all or part of the District, to: 1. Determine that particular goods or services with a purchasing value >$250,000 are required for the purposes of addressing the impact, consequences or need arising from the hazard to which the State of Emergency declaration relates [F&G r11(3)(b)]; and 2. Undertake tender exempt purchasing activity to obtain the supply of those goods or services identified in accordance with point 1 above [F&G r.11(2)(aa)].
Statutory Power being Delegated:	*Local Government Act 1995*: s.3.57 Tenders for providing goods or services *Local Government (Functions and General) Regulations 1996*: Regulation 11 'When tenders have to be publicly invited' Tender exemption under sub regulation 11(2)(aa) Associated definition under sub regulation 11(3)
Power is originally assigned to:	Local Government
Statutory Power of Delegation:	*Local Government Act 1995:* s.5.42 Delegation of some powers or duties to the CEO s.5.43 Limitations on delegations to the CEO
Power Delegated to:	Chief Executive Officer
Council's Conditions on Delegation:	a. This authority may only be exercised where the goods or services are urgently required, and it is not possible for Council to meet within an appropriate timeframe. b. Compliance with the Purchasing Policy is required, but only to the extent that such compliance will not incur an unreasonable delay in providing the required urgent response to the State of Emergency hazard. The rationale for non-compliance with Purchasing Policy must be evidenced in accordance with the Record Keeping Plan. c. Where a relevant budget allocation is not available and a purchase is necessary in response to a State of Emergency, the expenditure from an alternative available budget allocation must be authorised in advance by the Mayor or President (i.e. before the expense is incurred) in accordance with LGA s.6.8. d. The CEO is to inform Council Members after the exercise of this delegation, including details of the contract specification, scope and purchasing value and the rationale for determining that the goods or services were urgently required in response to the State of Emergency declaration. e. The CEO cannot sub-delegate this authority.
Statutory Power to Sub-Delegate:	Nil

2.10 PLANNING & DEVELOPMENT ACT 2005

2.10.1 STRUCTURE PLANNING (STRUCTURE PLANS, LOCAL DEVELOPMENT PLANS AND JINDEE DESIGN CODES)

Function Delegated: *This text is provided as a reference only. Delegates shall only act in full understanding of the delegated statutory power, inclusive of conditions [see below].*	Authorised to make decisions to amend structure plans and local development plans pursuant to Parts 4 (Structure Plans), and 6 (Local Development Plans) of the deemed provisions.
Statutory Power being Delegated:	Decisions relating to structure plans and local development plans under Parts 4 and 6 of Schedule 2 of *Planning and Development (Local Planning Schemes) Regulations 2015* (the deemed provisions).
Power is originally assigned to:	Local Government
Statutory Power of Delegation:	Clause 82 of the *Planning & Development (Local Planning Schemes) Regulations 2015* (the deemed provisions).
Power Delegated to:	Chief Executive Officer
Council's Conditions on Delegation:	The exercise of this delegated authority is conditional on the following: Structure Plans a) All new structure plans shall be referred to Council for consideration after being advertised for public comment; b) Prior to commencement of advertising of any new structure plan, or amendment thereto, Council Members must be notified of the proposal in writing advising the dates when the public comment period will start and finish; the means by which the proposal will be advertised, and each Council Member provided with copies of relevant plans and information relating to the proposal; c) Advertising of an amendment to a structure plan may be waived under Part 4 of the deemed provisions where, in the opinion of the delegate, it is of a minor nature in which the change or departure does not: • materially alter the purpose and intent of the structure plan; • change the intended lot/ dwelling yield by more than 10 per cent or adversely impact upon the amenity of adjoining landowners and occupiers; • restrict the use and development of adjoining land; or • significantly impact on infrastructure provision or impact upon the environment. *NOTE: Under Clause 29(3) of the deemed provisions, the WAPC is also required to be of an opinion that an amendment to a structure plan is of a minor nature prior to advertising being waived.* d) The delegate may approve an amendment to a structure plan under Part 4 of the deemed provisions after being advertised

Deleted: 1

for public comment provided that:-

- If objections are raised on valid planning grounds that cannot be addressed through modification to the structure plan, the amendment application will be referred to Council for determination;
- Council Members are notified in writing of the delegate's intention to do so and provided with a summary of submissions and Administration's recommendations in respect of those submissions; and
- Council Members are provided with at least five working days in which to request that the proposal be referred to Council for consideration and recommendation.

e) The delegate may approve an amendment to a structure plan under Part 4 of the deemed provisions where advertising has been waived

f) An application to amend a structure plan shall be referred to Council for consideration and recommendation or determination (whichever appropriate), where requested by the applicant in writing.

Local Development Plans

a) Prior to commencement of advertising of any new local development plan, or amendment thereto, Council Members must be notified of the proposal in writing advising the dates when the public comment period will start and finish; the means by which the proposal will be advertised, and each Council Member provided with copies of relevant plans and information relating to the proposal.

b) The delegate may approve a Local Development Plan or amendment to a Local Development Plan under Part 6 of the deemed provisions after being advertised for public comment provided that:

- Council Members have been notified in writing of the delegate's intention to do so and provided with a summary of the submissions and Administration's recommendations in respect of those submissions; and
- Council Members are provided with at least five working days in which to request that the proposal be referred to Council for determination.

Jindee Design Codes

The delegate may determine an amendment to the Jindee Design Code where in the opinion of the delegate, the amendment is minor in nature and does not:

i) Materially alter the purpose and intent of the structure plan;
ii) Change the intended lot / dwelling yield by more than 10 per cent or adversely impact upon the amenity of adjoining landowners and occupiers;
iii) Restrict the use and development of adjoining land; or

Deleted: 1

	Significantly impact on infrastructure provision or impact upon the environment.

5 DELEGATIONS TO CHIEF EXECUTIVE OFFICER AND OTHER OFFICERS FROM STATUTORY AUTHORITIES

5.1 DEPARTMENT OF LANDS – DEVELOPMENT APPLICATIONS MADE UNDER THE AUSPICES OF THE PLANNING & DEVELOPMENT ACT 2005

DoL FILE 1738/2002v8; 858/2001v9

PLANNING AND DEVELOPMENT ACT 2005

INSTRUMENT OF AUTHORISATION

I, **Donald Terrence Redman MLA**, Minister for Lands, a body corporate continued by section 7(1) of the *Land Administration Act 1997*, under section 267A of the *Planning and Development Act 2005*, HEREBY authorise, in respect of each local government established under the *Local Government Act 1995* and listed in Column 2 of the Schedule, the person from time to time holding or acting in the position of Chief Executive Officer of the relevant local government, to perform the powers described in Column 1 of the Schedule subject to the conditions listed in Column 3 of the Schedule.

Dated the 2nd day of June 2016

HON DONALD TERRENCE REDMAN MLA
MINISTER FOR LANDS

SCHEDULE

This is the Schedule referred to in an Instrument of Authorisation relating to Development Applications under the *Planning and Development Act 2005*

Column 1	Column 2	Column 3
The power to sign as owner in respect of Crown land that is: • a reserve managed by the local government pursuant to section 46 of the *Land Administration Act 1997* and the development is consistent with the reserve purpose and the development is not for a commercial purpose; or • the land is a road of which the local government has the care, control and management under section 55(2) of the *Land Administration Act 1997* and where there is no balcony or other structure proposed to be constructed over that road unless that structure comes within the definition of a "minor encroachment" in the Building Regulations 2012 (Regulation 45A), or is an "awning, verandah or thing" (Regulation 45B), or is a ground anchor, and where the development is consistent with the use of the land as a road, in respect of development applications being made under or referred to in: (i) section 99(2) of the *Planning and Development Act 2005* in respect of development for which approval is required under a regional interim development order (as that term is defined in that Act); (ii) section 103(2) of the *Planning and Development Act 2005* in respect of development for which approval is required under a local interim development order (as that term is defined in that Act); (iii) section 115 of the *Planning and Development Act 2005* in respect of development within a planning control area (as that term is defined in that Act); (iv) section 122A of the Planning and Development Act 2005 in respect of which approval is required under an improvement scheme (as that term is defined in that Act); (v) section 162 of the *Planning and Development Act 2005* in respect of developments for which approval is required under a planning scheme or interim development order (as those terms are defined in that Act);	City of Albany City of Armadale Shire of Ashburton Shire of Augusta-Margaret River Town of Bassendean City of Bayswater City of Belmont Shire of Beverley Shire of Boddington Shire of Boyup Brook Shire of Bridgetown-Greenbushes Shire of Brookton Shire of Broome Shire of Broomehill-Tambellup Shire of Bruce Rock City of Bunbury Shire of Busselton Town of Cambridge City of Canning Shire of Capel Shire of Carnamah Shire of Carnarvon Shire of Chapman Valley Shire of Chittering Shire of Christmas Island Town of Claremont City of Cockburn Shire of Cocos (Keeling) Islands Shire of Collie Shire of Coolgardie Shire of Coorow Shire of Corrigin Town of Cottesloe Shire of Cranbrook Shire of Cuballing Shire of Cue Shire of Cunderdin Shire of Dalwallinu Shire of Dandaragan Shire of Dardanup Shire of Denmark Shire of Derby/West Kimberley Shire of Donnybrook-Balingup Shire of Dowerin Shire of Dumbleyung Shire of Dundas Town of East Fremantle Shire of East Pilbara Shire of Esperance Shire of Exmouth City of Fremantle City of Greater Geraldton	In accordance with and subject to approved Government Land policies. Any signature subject to the following endorsement: Signed only as acknowledgement that a development application is being made in respect of a proposal that includes Crown land, Crown reserves under management for the purpose, or a road and to permit this application to be assessed under the appropriate provision of the *Planning and Development Act 2005* (including any planning scheme). The signature does not represent approval or consent for planning purposes. Further, in the event that development approval is granted for the proposal, the above signature should not be taken as an acknowledgement of or consent to the commencement or carrying out of the proposed development or to any modification of the tenure or reservation classification of the Crown land component.

5.6 WESTERN AUSTRALIAN PLANNING COMMISSION – DELEGATION OF CERTAIN POWERS AND FUNCTIONS OF THE WESTERN AUSTRALIAN PLANNING COMMISSION RELATING TO THE METROPOLITAN REGION SCHEME

PL405

PLANNING AND DEVELOPMENT ACT 2005

INSTRUMENT OF DELEGATION

Del 2022/03 Powers of Local Governments Metropolitan Region Scheme

Delegation of certain powers and functions of the Western Australian Planning Commission relating to the Metropolitan Region Scheme.

Preamble

Under section 16 of the Planning and Development Act 2005 (the Act) the Western Australian Planning Commission (the WAPC) may, by resolution published in the *Government Gazette*, delegate any function to an officer of a public authority or to a local government, a committee established under the Local Government Act 1995 or an employee of a local government

In accordance with section 16(4) of the Act, a reference in this instrument to a function or a power of the WAPC includes and extends to, without limitation or restriction, any of the powers, privileges, authorities, discretions, duties and responsibilities vested in or conferred upon the WAPC by the Act or any other written law as the case requires.

Resolution under section 16 of the Act (delegation)

On 8 December 2021, pursuant to section 16 of the Act, the WAPC resolved—

A. To delegate to local governments, and to members and officers of those local governments, its functions in respect of the determination, in accordance with Part IV of the Metropolitan Region Scheme, of applications for approval to commence and carry out development specified in clauses 1 and 2 of Section A, within their respective districts, subject to the conditions set out in clauses 1 to 4 of Section B;

B. To revoke its delegation of powers and functions to local governments as detailed in the notice entitled "DEL 2017/02 Powers of local governments (MRS)" published in the *Government Gazette* on 30 May 2017, to give effect to this delegation.

SAM FAGAN, Secretary, Western Australian Planning Commission.

PLANNING AND DEVELOPMENT ACT 2005

INSTRUMENT OF DELEGATION

SECTION A—Types of Development

1. Development on zoned land

Applications for development on land zoned under the MRS except—

(a) where the land is subject to a resolution under Clause 32 of the MRS; or

(b) where the land is subject to the declaration of a planning control area under Section 112 of the *Planning and Development Act 2005*; or

Deleted: 1

(c) where that land is partly within the development control area described in section 10 of the *Swan and Canning Rivers Management Act 2006* or is outside the development control area but abuts waters within the development control area and the Swan River Trust objects to the proposal, or a referral body recommends refusal; or

(d) where the local government is of the opinion that the application should be determined by the WAPC on the grounds that the proposal is of State or regional importance or is in the public interest, or

(e) in respect of public works undertaken by public authorities.

2. Development on regional road reservations

Applications for developments on or abutting land that is reserved in the MRS for the purpose of a regional road.

SECTION B—Conditions

1. Referral requirements for development on land within or abutting a regional road reservation

The following applications for development on land that abuts or is fully or partly reserved as regional road reservation (classified as Category 1, 2 and 3) shall be referred to Main Roads WA (MRWA) or the Department of Planning, Lands and Heritage, as applicable, for transport planning related comments and recommendations before being determined by the local government subject to the process explained in clause 4, Section B.

Type of regional road reservation in the MRS	Classification on plans SP 693 (PRR) and SP 694 (ORR)	Referral Agency
Primary Regional Road (PRR)	Category 1, 2 and 3	Main Roads WA
Other Regional Road (ORR)	Category 1, 2 and 3	Department of Planning, Lands and Heritage

The regional road network (PRR and ORR) changes periodically with amendments to the MRS. This clause relates to all regional road reservations in the MRS as amended from time to time. Regional roads subject to this notice and the relevant agency that is responsible for their planning are shown on accompanying editions of plans SP 693(PRR, MRWA) and SP 694 (ORR, WAPC).

The road categories shown on plans SP 693 (PRR) and SP 694 (ORR) classify the regional roads based on—

(a) the permissible vehicular access arrangements to the subject land via the regional road frontage

- **Category 1 road** means that frontage access is not allowed (control of access);
- **Category 2 road** means that frontage access may be allowed subject to approval; and

(b) the legibility and statutory powers of current road land requirements defined for the purpose of regional road reservation in the MRS

- **Category 3 road** means that the subject regional road reservation is not accurately defined or is subject to review by the agency that is responsible for planning of the regional road.

"**Category 1 road**" applies where regional roads—

(a) are constructed or planned to a fully controlled and grade separated freeway standard; or

(b) are constructed or planned to an access controlled arterial standard, (i.e. functioning as Primary Distributor or Integrator Arterial (District Distributor) road with widely spaced signalised intersections or roundabouts, and a few, if any, direct access points to individual sites or local streets.

"Category 2 road" applies where regional roads—

(a) are constructed or planned to a partially access controlled arterial standard, (i.e. a primary or district distributor road with direct connections to local streets and driveways to larger sites, but with some restriction of direct frontage access to individual properties); or

(b) have direct frontage access to abutting properties due to the historic development of the road and properties.

"Category 3 road" applies where regional road reservation is not accurately defined or is under review.

Tables 1, 2 and 3 below outline the category of the regional road reservation and the criteria for referring development applications to agencies for comment in accordance with this instrument of delegation.

Deleted: 1

Table 1—Referral process of development applications with respect to Category 1 (PRR or ORR reservations in the MRS)

Respective referral agency (as per Section B)	
Referral is required in these instances	**Referral is not required in these instances**
1. Where a development application has one or more of the following characteristics— (a) Development, including earthworks and drainage, which encroaches or impacts upon the road reservation; or (b) Development with potential for a significant increase in traffic using any access, either directly or indirectly, onto the road reservation; or (c) Development, which involves direct vehicle access to and/or from the regional road reservation.	1. Where the local government first decides to refuse the application under the MRS; or 2. Under circumstances where the application is for an ancillary and incidental addition or modification to an existing authorised development, which does not encroach upon the road reservation and has no intention to alter existing access arrangements.

Table 2—Referral process of development applications with respect to Category 2 (PRR or ORR reservations in the MRS)

Respective referral agency (as per Section B)	
Referral is required in these instances	**Referral is not required in these instances**
1. Where a development application has one or more of the following characteristics— (a) Development, including earthworks and drainage, which encroaches or impacts upon the road reservation; or (b) Development with potential for a significant increase in traffic on the regional road using any access, either directly or indirectly, onto the road reservation; or (c) Development, which involves the retention of more than one existing access; or additional, relocated or new access between the subject land and the road reservation; or (d) Development, which proposes retention of an existing access between the subject land and the road reservation, where alternative access is or could be made available from side or rear streets or from rights of way at rear; or (e) Development on a lot affected by the regional road reservation where— • all or part of the proposed development is within the regional road reservation; and • has a construction value greater than $50 000; or (f) Development on a lot affected by the regional road reservation where— • none of the proposed development is within the regional road reservation; and • has a construction value greater than $250 000	1. Where the local government first decides to refuse the application under the MRS; or 2. Under circumstances where the application is for an ancillary and incidental addition or modification to an existing authorised development, which does not encroach upon the road reservation and has no intention to alter existing access arrangements.

Deleted: 1

Table 3—Referral process of development applications with respect to Category 3 (PRR or ORR reservations in the MRS)

Respective referral agency (as per Section B)	
Referral is required in these instances	**Referral is not required in these instances**
1. All development applications, other than those where local government first decides to refuse it.	1. Where the local government first decides to refuse the application under the MRS

Notes—

(1) Copies of plans SP 693 (PRR) and SP 694 (ORR) are available from the WAPC's website: "Resolutions and instruments of delegation—WAPC Powers of local governments (MRS)". (http://www.DPLH.wa.gov.au/1212.asp).

(2) In determining applications under this delegation, local governments shall have due regard to relevant WAPC and MRWA policy and guidelines, including but not limited to the Commission's D C Policy—*5.1 Regional Roads (Vehicular Access)*, the Transport Impact Assessment Guidelines, and MRWA *Driveways Policy*, which set out the principles and requirements to be applied when considering proposals for vehicle access to or from developments abutting certain categories of regional roads.

(http://www.DPLH.wa.gov.au/publications/812.asp; and https://www.mainroads.wa.gov.au/BuildingRoads/StandardsTechnical/RoadandTrafficEngineering/GuidetoRoadDesign/Pages/Driveways.aspx)

(3) Local governments shall ensure that sufficient transport information accompanies the development application to assist the referral agency in assessing the transport implications of the proposal. This information should be provided in accordance with the WAPC's *Transport Impact Assessment Guidelines*. http://www.DPLH.wa.gov.au/publications/1197.asp

(4) With regard to proposals for new noise-sensitive developments, the local government shall have due regard to the provisions of Commission's *State Planning Policy—5.4 Road and Rail Transport Noise and Freight Considerations in Land Use Planning*. (http://www.DPLH.wa.gov.au/publications/1182.asp)

2. Referral requirements for development on land abutting the Swan River Trust Development Control Area

Applications for development on land that is outside the development control area but abutting land that is in the development control area, or which in the opinion of the local government are likely to affect waters in the development control area, shall be referred to the Swan River Trust for comment and recommendation before being determined by the local government.

3. Referral requirements for development on land abutting other reservations

Applications for development on land abutting land reserved in the MRS for purposes other than regional roads or Parks and Recreation (where the reservation corresponds with the Swan River Trust development control area and is covered by Clause 2, Section B of this notice) shall be referred to the public authority responsible for that reserved land for comment and recommendation before being determined by the local government.

In the case of land reserved for the purpose of Parks and Recreation, which is not vested or owned by another public authority, the applications shall be referred to the Department of Planning, Lands and Heritage before being determined by the local government.

4. For the purpose of this Instrument of Delegation

(a) Where an application is referred by the local government to a public authority for comment and recommendation, the public authority shall provide comment and a recommendation, if any, within 30 days of receipt of the application. If no comment or recommendation is received within that 30 day period the local government may determine the application on the available information.

(b) Where the recommendation provided by the public authority specified in the delegation notice is not acceptable to the local government the application, together with the recommendations provided by all public authorities consulted and the reasons why the recommendation is not acceptable to the local government, shall be referred immediately to the WAPC for determination.

(c) The powers delegated to a member or officer of a local government may only be exercised by a member or officer who has been delegated power from the local government to consider and determine applications for approval to commence and carry out development within the local government district under the local government's local planning scheme.

Interpretation

In this Instrument of Delegation, unless the context otherwise requires—

- A reference to a 'position' or 'classification' contemplates and includes a reference to its successor in title.
- "access" means both entry and exit from either a road or abutting development by a vehicle.
- "Commission" or "WAPC" means the "Western Australian Planning Commission".

Deleted: 1

- "development" has the same meaning given to it in and for the purposes of the *Planning and Development Act 2005* or "development means the development or use of any land, including—
  (a) any demolition, erection, construction, alteration of or addition to any building or structure on the land;
  (b) the carrying out on the land of any excavation or other works;
  (c) in the case of a place to which a Conservation Order made under section 59 of the *Heritage of Western Australia Act 1990* applies, any act or thing that—
    (i) is likely to change the character of that place or the external appearance of any building; or
    (ii) would constitute an irreversible alteration of the fabric of any building".
- "local road" means a public road other than a private road or a road subject of reservation under Part II of the MRS.
- "not acceptable" means that the local government wishes to determine the application, as a delegate of the WAPC, in a manner that is inconsistent with the recommendation received from the public agency to which the local government was required to consult under this Notice of Delegation.
- Main Roads WA means Main Roads Western Australia
- "regional road" means any road designated under the region Scheme as follows—
  (a) land coloured red in the Scheme Map—Primary Regional Roads; and
  (b) land coloured dark blue in the Scheme Map—Other Regional Roads.
- "reserved land" means land reserved under Part II of the MRS.
- "road reservation" means land reserved for the purposes of a regional road in the MRS.
- "significant increase in traffic" means generating more than 100 vehicle trips in the peak hour and would therefore require a transport assessment to accompany the development application. Refer to the Commission's *Transport Impact Assessment Guidelines*

CORRECTION

PLANNING AND DEVELOPMENT ACT 2005

INSTRUMENT OF DELEGATION

Del 2017/02 Powers of Local Governments and Department of Transport

Metropolitan Region Scheme

Certain typographical errors were recorded in the Instrument of Delegation, made under the *Planning and Development Act 2005*, and published on 30 May 2017 from page 2738 to 2743 of the *Government Gazette*.

The errors are corrected as follows—

1. On page 2739, the text of Resolution C is deleted and replaced with the following words—
   "TO REVOKE its delegation of powers and functions to local governments and the Department of Transport as detailed in the notice entitled "DEL 2015/02 Powers of local governments and Department of Transport (MRS)" published in the *Government Gazette* on 18 December 2015, to give effect to this delegation."

PL402

PLANNING AND DEVELOPMENT ACT 2005

AMENDMENT TO INSTRUMENT OF DELEGATION—POWERS OF LOCAL GOVERNMENT AND DOT

Notice of amendment to the Instrument of Delegation, Instrument of Delegation 2017/02—Powers of Local Governments and Department of Transport, Metropolitan Region Scheme, as gazetted on 30 May 2017

Preamble

Under section 16 of the *Planning and Development Act 2005* (the Act), the Western Australian Planning Commission (WAPC) may, by resolution published in the *Government Gazette*, delegate any function to a member, committee or officer of the WAPC or to a public authority or to a member or officer of a public authority.

In accordance with section 16 (4) of the Act, a reference in this instrument to a function or power of the WAPC includes and extends to, without limitation or restriction, any of the powers, privileges, authorities, discretions, duties and responsibilities vested in or conferred on the WAPC by the Act or any other written law as the case requires.

Resolution under section 16 of the Act (delegation)

On 12 December 2018, pursuant to section 16 of the Act, the WAPC resolved—

A. To amend the Instrument of Delegation 2017/02—Powers of Local Governments and Department of Transport, Metropolitan Region Scheme as gazetted on 30 May 2017, as set out in Schedule 1 below.

SAM FAGAN, Secretary,
Western Australian Planning Commission.

Schedule 1

1. Instrument of delegation amended

The amendments within this Schedule are to the Schedules set out in the Instrument of Delegation 2017/02—Powers of Local Governments and Department of Transport, Metropolitan Region Scheme, as gazetted on 30 May 2017 and as amended.

2. Amendment to Section A

1. The word "but excluding any application relating to large format digital signage" are deleted from clause 2.
2. Clause 3 is deleted.

3. Amendments to Section B

1. The words in brackets "(excluding applications under clause 3, Section A)" are deleted from the title to clause 4.
2. Clause 5 is deleted.
3. In the interpretation section the terms "Large format digital signage" and "Public Authority" and their respective definitions, are deleted.

PL403

PLANNING AND DEVELOPMENT ACT 2005

AMENDMENT TO INSTRUMENT OF DELEGATION—POWERS OF OFFICERS

Notice of amendment to the Instrument of Delegation to committees of certain functions of the Western Australian Planning Commission, as gazetted on 16 October 2015 and as amended.

Preamble

Under section 16 of the *Planning and Development Act 2005* (the Act), the Western Australian Planning Commission (WAPC) may, by resolution published in the *Government Gazette*, delegate any function to a member, committee or officer of the WAPC or to a public authority or to a member or officer of a public authority.

In accordance with section 16 (4) of the Act, a reference in this instrument to a function or power of the WAPC includes and extends to, without limitation or restriction, any of the powers, privileges, authorities, discretions, duties and responsibilities vested in or conferred on the WAPC by the Act or any other written law as the case requires.

Deleted: 1

Resolution under section 16 of the Act (delegation)

On 12 December 2018, pursuant to section 16 of the Act, the WAPC resolved—

A. To amend the Instrument of Delegation 2018/01 Delegation to officers of certain powers and functions of the Western Australian Planning Commission as gazetted on 3 October 2018, as set out in Schedule 1 below.

SAM FAGAN, Secretary,
Western Australian Planning Commission.

Schedule 1

1. Instrument of delegation amended

The amendments within this Schedule are to the Schedules set out in the Instrument of Delegation 2018/01—Delegation to officers of certain powers and functions of the Western Australian Planning Commission as gazetted on 3 October 2018.

2. Amendment to Schedule 9

Any reference to the title "Manager, Strategic Property Unit" is deleted and replaced with the title "Chief Property Officer."

Any reference to the "Property Operations Manager" is deleted and replaced with the title "Manager; Acquisitions, Management, Disposals."

3. Amendment to Schedule 9

The following row is inserted into to Schedule 9 after item 9.25 on page 3843 of the *Gazette*—

9.26. All powers and functions of the WAPC, pursuant to regulation 1 of the *Power of Entry and Inspection Regulations*.	• Any Compliance Officer • Any other Officer of the Department	Subject to the statutory limitations prescribed under regulation 1.
